2.7	Risk assessment of new low-risk product families	<p>Risk assessment of new low-risk products families (microorganisms, baculovirus, semio-chemicals, elicitors, RNAi-RNA interference)</p> <p>There is a need for more basic research on how to assess the effects/risks of these new products. Special focus on Microorganisms where genomictools (determining the presence and activity of genes coding for metabolites, toxins, antimicrobials resistance) but also proteomics and metabolomics could serve risk assessment and management.</p>
