**Subject:** Manifesto lays down the gas industry's contribution to EU climate efforts

Dear Sir or Madam,

We are pleased to share with you a Manifesto published by the European gas industry partnership GasNaturally. The Manifesto lays down the gas industry's contribution to the EU's climate efforts, namely:

1. Enabling fast and cost-efficient CO<sub>2</sub> emissions reductions and improving air quality across all sectors of the economy, in particular by replacing coal with gas wherever possible.
2. Optimising infrastructure costs by using the existing gas resources and network as backbone for a reliable, hybrid energy system with an increasing share of renewable energy.
3. Raising the number of options available to consumers by developing innovative renewable and low-carbon gas projects.
4. Continuously improving its own efficiency and footprint, including the mitigation of methane emissions.

Please find the press release and Manifesto enclosed to this email.

Sincerely,

GasNaturally
