**Subject:** Re: EU Battery Alliance - Follow-up to 11/10 letter  
**Attachments:** PastedGraphic-1.tiff

Dear [REDACTED] & Mr. Szapiro,

My name is [REDACTED]. I am with CAEC - inventors & manufacturers of advanced batteries with 200 global patents, many essential.

Vice-President of the European Commission, Maroš Šefčovič, through [REDACTED], recommended we inform you both of the kind of cooperation we could provide the EU Alliance.

We would feel privileged to work together from the most basic levels through to the most complex, including:

- cathode
- cell
- BMS (Battery Management System)
- system technology
- second life

**CAEC in brief:**

We are the IP holders of an entire ecosystem of clean energy battery storage: LFP Oxide (Lithium Ferrous Phosphorous Oxide) battery cathode material (2006), as well as cell, BMS, ASIC chips and systems technology - all invented and optimised by our [REDACTED] of Cornell University.

We are experienced with EV and other systems, including UPS - supplying to tier-1 companies, like Eaton, with high-power UPS battery backup systems.

Please allow me to mention just two highlights of LFP Oxide:

1. Low Manufacturing Cost, ~30% lower than other LFP
2. Environment & Safety - not toxic, not explosive and not flammable. Does not contain any rare earth metals or heavy metals like Cobalt or Cadmium. LFP Oxide is completely RoHS complaint.

While I have endeavoured to keep this email brief, there are more highlights we look forward to sharing when it is convenient for you.

I have a few questions regarding schedule of this Alliance. We did not attend the first conference, will there be any future conferences coming up? If so when & where? When do you anticipate completing the Alliance's consolidation?

Please also let us know our next step. We are looking forward to hearing from you.

Best Regards,

[REDACTED]
