Subject: New concept for EU to solve problem with plastic waste
Dear Mr. Timmermans,

based on the recommendation of EC Vice-President Sefcovic, I would ask you, as EC Executive Vice-President and Commissioner for the European Green Deal, to cooperate in promoting our technology for the environmentally friendly disposal of plastic waste into practical life.

Our company has developed the concept how to simply, efficiently and ecologically dispose of much of the plastic waste, that is a major environmental problem in the EU and a source for micro-plastics in the food chain. The technology is based on the use of existing capacities in the metallurgical industry, making it much easier to put into practice. At the same time, in times of crisis in metallurgy, our concept will save up to 6,000 tonnes of coal per year for one metallurgical plant.

This technology is patented. And EC Vice-President Mr. Sefcovic expressed his full support by email dated 9.12.2019.

I hope that this brief information about this new way of solving the problem of micro-plastics and plastic waste caught your interest.

If required, I will gladly send you details, or come introduce the concept personally.

P.S. - The same mail was sent direct to frans-timmermans-xxxxxxx@xx.xxxxxx.xx 12.12.2019 as recommended by the Cabinet of Mr. Šefčovič

Yours sincerely,

[REDACTED]
