Subject: Advancing Hydrogen in Europe

Dear all,

At Equinor we are looking forward to the publication of the hydrogen strategy next week and in addition to the previous material I have shared with many of you I would like to draw your attention to today's announcement of us now leading a project to develop one of the UK's – and the world's – first at-scale facilities to produce hydrogen from natural gas in combination with carbon capture and storage (CCS). Once realized this would be the largest of its kind in the world and a showcase for solutions that could reduce industrial carbon dioxide emissions by near to 1 million tons per year.

While this project is in the UK we hope it can inspire EU member states and the Union to action and we naturally stand ready to share knowledge as we progress this project. We believe this kind of solutions should be one of the pillars in the upcoming hydrogen strategy and in the work of the hydrogen alliance. With one of the most advanced portfolios of large scale clean hydrogen projects we believe we can be a valid partner for advancing the alliance. Please let us know if we can be of help or support.

Yours sincerely,

—
