Subject: re our meeting 23rd March

Dear Joan,

I'm coming back to our discussion around taxonomy and the requirements drafted for hydrogen production together with EDF, Fortum and French Hydrogen. For UPM the leaked DA include several angles as we are very much forest based and also have hydro power and nuclear power assets and even utilization of hydrogen in production of advanced biofuels and biochemicals. Mainly our agenda is to promote an future "beyond fossils".

On the leaked DA we are still proposing the following amendments:

- In **forestry**, the sustainability (and related) criteria must be identical with REDII sustainability criteria.
- The delegated act should refer only to Water Framework Directive requirements in **hydropower** to avoid ambiguity and new interpretations of existing legislation.
- All **biofuels** criteria, including the technical screening criteria, should be identical with the criteria in REDII.
- **Nuclear power** should be included in the delegated act especially in the light of the positive remarks in recently published JRC report.

I would be glad if these proposals could be taken into account and given attention also within your area of influence. I'm always available to further discuss on these and attached you can also find some further details about UPM and our position.
