

ENER C3 – Eurogas meeting 04 February 2021

DG ENER C3: [REDACTED]

Eurogas: [REDACTED]

(dialed in via phone)

Eurogas underlined the need to safeguard unbundling provisions when it comes to production of H2 ie P2G installations should not be operated by TSOs. If any engagement is necessary it should be subject to time limit and a market test. Eurogas clearly see the interest of commercial market players and TSOs involvement in owning electrolyzers would foreclose H2 market for competition.

Further Eurogas reiterated their idea to establish a target for decarbonised gases based on a life-cycle assessment promoting gases with lowest CO2 emissions.
