Subject: 5th update of the RAT common list AGREED
Attachments: HSC_Common RAT list_5th update_AGREED_230721.pdf; Addendum to the 5th update of RAT common list_230721.pdf

Dear members of the Health Security Committee,
Dear colleagues,

As no further comments were received on the proposal, the fifth update of the RAT common list has been considered agreed by the HSC by written procedure. Please find the final documents enclosed, which will soon also be available online at [Technical working group on COVID-19 diagnostic tests | Public Health \(europa.eu\)](#). The JRC database will also be updated accordingly, later this afternoon.

For information, since the first publication of the EU common list, which included 26 RATs, a further 112 RATs has been added through the work of the Health Security Committee and its technical working group on COVID-19 diagnostic tests. The common list now includes a total of 138 rapid antigen tests. The work on possible further updates will continue in September again.

Kind regards,
HSC Secretariat
