Dear Vice-President Timmermans,

It is my pleasure to convey the attached letter to you from [redacted] Green Hydrogen Organisation. The letter relates to the draft Delegated Acts on renewable hydrogen which are currently open for consultation. The increased target of 10 million tonnes of domestic and 10 million tonnes of imported renewable green hydrogen by 2030 is most welcome under REPowerEU.

The letter shares concerns that the implications for green hydrogen production outside the EU are not receiving adequate attention. Third countries, including many developing and emerging economies, where green hydrogen has the potential to provide domestic clean energy for fast-growing populations and which also offers a major export opportunity are crucial to the EU achieving its targets on green hydrogen to tackle the climate and energy security challenges we now face. Yesterday’s EU-Egypt Joint Statement on Climate, Energy and Green Transition underscores the role of renewable green hydrogen in these partnerships and the importance of ensuring a fit for purpose renewable green hydrogen regulatory architecture.

The letter therefore encourages the European Commission to ensure it is designing the best possible regulatory framework to achieve its ambition as a green hydrogen leader.

We stand ready to discuss these issues further with you and your team to achieve the right outcome.

Best wishes,
A planet to save, not a day to lose.
