Meeting with Energinet

online – 30/11/2022 9:30-10:30

1. Context of the meeting
Energinet wished to present their view on the electricity market design reform.

2. List of points discussed
Energinet presented their view.
3. Conclusions/recommendations/opinions and next steps
Regarding CfD, Energinet considers that:
- there is a risk that contracting CfDs now will end up in too high CfD price and that the costs of the current crises are just delayed to the future (consumers would be supporting high-price CfDs when the market prices will be low in the future)
- the impact on forward market and on the incentives to provide flexibility from consumers are concerns

4. List of participants
Energinet:
