Disclaimer: This document was drawn up for internal use under the responsibility of the relevant staff member of DG CONNECT. It solely reflects the author’s interpretation of the interventions made. It does not reflect the position of nor does it commit the Commission, DG CONNECT and/or any third party referred to and cannot be quoted as such.

The meeting concerned the policy developments around electronic communications and technology files the exploratory consultation on the future of electronic communications sector, AI and others.

- CISCO representatives presented broadly their company’s activities by emphasising on CISCO position as a global tech company in areas such as security, cloud, private and public networking. More specifically, Cisco is mainly active in B2B sector and provides solutions that support the technological needs of governments and large/medium size companies, in areas such as education, connectivity and digitalisation in general. Based on the above, Cisco activities touching upon a significant number of DG CNECT related policy areas. Finally, they emphasised on the activities of their company on sustainability and digital twin transition by the improvement of the sustainability of products. In this context, they are actively participate in the Green digital alliance.

- As regards the exploratory consultation on the future of electronic communications sector, Cisco representatives agreed with the Commission approach as regards to the need for taking into consideration during the assessment the whole internet ecosystem and its challenges.
