Subject: Mobility IPCEI - Hydrogen Europe meeting request

Dear Henrik,

I hope my email finds you well since the General Assembly of the Renewable and Low Carbon Fuels Alliance.

I am writing to you concerning the recent developments concerning IPCEIs (Important Projects of Common European Interest) in the mobility sector.

After the success of the IPCEIs Hy2Tech and Hy2Use that were approved by DG COMP in July 15 and September 21, and provided an important step towards the development and deployment of both...
electrolysers and fuel cell technologies, Member states are now progressing fast in the prenotification of a new IPCEI wave dedicated to Mobility and Transport.

This new wave is set to accelerate the overall deployment of the European hydrogen mobility ecosystem, encompassing investment projects in a wide range of mobility equipments and transport segments across the Member states.

Considering the above, I would be very glad to further discuss with you the ambitions of this Mobility IPCEI and the related infrastructure and vehicle deployment projects, as they can definitely contribute to decarbonise transportation, consolidate European technological leadership and contribute with H2 appliances to the implementation of RePower EU.

In attachment a pager showcasing the spread of topics addressed by the Mobility and Transport IPCEI and the number of projects proposed by stakeholders in the Member states.

Looking forward to your answer, I remain at your disposal for any further details.

Kind regards,
