Subject: Call for action- Preserving full scope of Non-CO2 MRV in aviation

Dear Belgian EU Presidency, Dear Director Generals,

The non-CO2 MRV introduced by the EU ETS and currently being discussed among EU Member States represents a historic first step to tackle non-CO2 effects, as it can boost research and start a pathway to their mitigation.

Amidst recent lobbying efforts from certain industry stakeholders, we write to you to emphasize the critical importance of preserving the full scope of the proposed MRV scheme. Deviating from this comprehensive approach jeopardizes our ability to understand and address the full climate impact of aviation.

Attached to this email you may find a letter signed by industry stakeholders and NGOs, calling for the protection of a full scope non-CO2 MRV, that will also be published on the 6th of May in the media and on the website of Transport and Environment.

Yours sincerely,
