Waterloo Road
London SE1 8UG

Dear [REDACTED]

Glyphosate's Contamination of Vaccines

Closely following Anthony Samsel's and Stephanie Seneff's exposure (1) that glyphosate technical acid, namely N-(phosphonomethyl) glycine, is in fact a synthetic glycine amino acid and analogue of the amino acid glycine, Samsel has now found glyphosate's contamination in a range of multiple vaccines from different US sources, namely MMR, Varicella (chicken pox), Zostavax (shingles), Proquad (MMR, rubella, varicella), Fluzone Quad (flu vaccine) and Hepatitis B (B Energix-B) (2).

These Glyphosate contamination findings are itemized at Annex A and are expressed in parts per billion (ppb) ranging from 0.33 to 2.90. In terms of molecules, chemistry scientist Samsel informs that 1 ppb = 3.561 trillion molecules, each molecule is capable of disrupting a protein's structure (3).

Glyphosate's presence in vaccines is considered to have been grown from chicken egg protein or gelatin, that comes from livestock (one can assume) fed GM feed containing glyphosate residues (4). It is particularly worrying that gelatin is derived from bone/bone marrow, as animal bones and no doubt human ones too are known to store significant amounts of glyphosate (5). This identifies the falsehood stated by EFSA in its review that 'Absorbed glyphosateshowing no potential for bioaccumulation' (6).

The former GMO scientist Dr Thierry Vrain points out that glyphosate is a powerful and very broad spectrum descaling agent and one should expect long term chronic effects from the progressive lack of micronutrients (7).

This is a prime example of the danger that agricultural trade agreements pose, e.g. TTIP and CETA, where our Nation will not be able to act to rectify such a health problem (8). It should not be overlooked that gelatin is used in other health products. The EU President is disposed to sign the EU – Canadian Comprehensive Economic Trade Agreement (CETA) this October (9). EFSA and the EU Commission have allowed themselves to be deceived by the Glyphosate Task Force.

Yours Sincerely
