15.1	Report on implementation of the MoU regarding Harmonisation of a Charging Capability for Mobile Phones	

84. [REDACTED], on behalf of the MoU signatories, presented a progress report on the implementation of the MoU regarding a Harmonisation of Charging Capability for Mobile Phones. He reminded that following the MoU, all new mobile phone models and new EPS models on the market produced by the signatories shall offer this common charging capability one year after the related standards have become available i.e. by end of 2011. Regarding the standards and their international impact, Mr [REDACTED] highlighted that the CENELEC interoperability standard EN62684:2010 was also adopted by IEC as IEC62684:2011 with publication date Jan 27, 2011 and that ITU-T L1000 update referred to IEC62684. As regard the implementation, it should be noted that no issues were reported on the mobile side and this was a good news. A point was that that MoU signatories, charger manufacturer and testing facilities has indentified issues with Common Mode Noise performance of the external power supply during development and testing but they were all working together to resolve this CMN issue. Another point was the confusion amongst Notified Bodies on the application of EN301489-34 to external power supplies not intended to meet the MoU but, and to clarify the application of the standards, MoU signatories would like to work with DG ENTR, R&TTE CA and ETSI until v1.2.1 of the ETSI standard becomes harmonised, and proposed to work on a guidance document to be published on the onechargerforall.eu website. Finally, a second progress report was announced for the next TCAM meeting.
85. [REDACTED] thanked Mr [REDACTED] for the presentation and noted with interest the status of the implementation as [REDACTED] was also receiving request from consumers on this issue. Regarding the implementation [REDACTED] asked Mr [REDACTED] for clarification as equipments were already on the market although the standards were only published in January 2011 and technical tests were still needed which would lead to a revision of the standard.
86. As regard the CENELEC standard Mr [REDACTED] informed that he did not believe that a revision of the standard was needed but only recommendation on how to do the testing of equipment.
87. [REDACTED] asked the Commission for clarification regarding the voluntary commitment of industry to use this standard as, following a legal provision of the R&TTED, you should ask the opinion of NB if you do not want to follow the way of the harmonised standard as regard the conformity assessment procedure.
88. The Commission precised that the commitment of industry to have a common charger for mobile phones was voluntary but that this voluntary commitment was to be dissociated of the application of the standard, on a voluntary basis, which confers presumption of conformity. The Commission also stressed the political visibility of the issue, and insisted on the importance of timely implementation of the commitments in the MoU and of regular reporting to the Commission and to TCAM.
