Subject: FW: EU Battery Alliance - Follow-up to 11/10

Dear [REDACTED], dear Mr Szapiro,

On behalf of [REDACTED] and [REDACTED] I would like to thank you for the letter and the possibility to confirm our interest in participating in the EU Battery Alliance.

We as NXP see ourselves as a key enabler for a competitive EU Battery Industry, addressing all battery management system relevant domains. We are committed to provide our expertise, particularly in the following domains:

- NXP is the global number 1 automotive semiconductor supplier, offering a broad battery management system (BMS) portfolio in order to develop the best and safest e-vehicles.
- The automotive battery value chain is undergoing radical changes and battery still represents one of the largest performance/cost differentiator for car makers. At the same time, battery electronics design requires different safety, reliability, security and performance standards compared to what is available today. Strategic partnerships with OEMs would help to significantly enhance performance, scalability and identify/close standardization gaps.
- Batteries require extremely accurate charging current and output voltages to optimize battery life and performance. NXP is offering and developing solutions designed to provide highest performance and accuracy, as well as exceptional configuration flexibility. The EU Battery Alliance could play a crucial role in strengthening cooperation between all relevant stakeholders incl. car and battery makers, facilitating co-development, technological breakthroughs, resulting in leading battery solutions and a strong market pull.

Please don't hesitate to get in touch in case you have any questions / comments.

We are looking forward to learning about the next steps and working with you in the upcoming months.

Best regards,

[REDACTED]
