**Subject:** Meeting request Enel [REDACTED] with Transport Commissioner Adina Valean

Dear [REDACTED],

We are working in Enel to organize during the days of 6<sup>th</sup> and 7<sup>th</sup> April 2020 a trip of our [REDACTED] in Brussels.

Meetings with some Commissioners will take place and it is of his interest to meet also Commissioner Valean.

In this respect, I would like to assess with you the availabilities in the Commissioner agenda and see how we could proceed.

As we were highlighting also in the past, we put Innovation and Sustainability at the core of our strategic plan and we believe these two concepts are inextricably linked: innovation can drive progress only if it is sustainable and, so, only if it generates measurable long-term social and environmental development benefits. The fight against climate change is a moral duty for all of us and if we are able to address this challenge with meticulous attention to its social dimension, our response has the potential to ensure a prosperous future for our society.

We are committed to have an important contribution and to engage in the in-depth transformation of the European economy and society to achieve climate neutrality in a just manner.

For such reasons, we are supporting the commitment of the European Commission and the presented European Green Deal.

In this respect, the transport sector is among our priorities and we consider of a mutual use sharing views on this subject.

Kind regards,

[REDACTED]
