

Virtual roundtable with ZF Group, BMW, Total, Daimler, Bosch, Mahle International

Transformation of the automotive value chain in the context of the green recovery: From political targets to shopfloor impacts

3 March 2020 9:30-10:45

The roundtable aims to build a better common understanding between the industry and policymakers on how to optimize the transition to carbon-neutrality, including its social and economic dimensions. We want to bring abstract target discussions to the shopfloor.

By sharing perspectives on the actual transformation of production facilities, with its opportunities and limits, the discussion will focus on the realistic pathways for the transition, business and investment decisions in industry, relating to both technologies and skills required to enable the transformation of the automotive industry. This vision supports Europe achieving carbon neutrality while simultaneously increasing competitiveness and industrial innovation and securing jobs.

09:30	Introduction and opening of the debate by the moderator Art.4.1(
09:35	Short presentations on practical challenges and solutions the automotive industry face in the transformations process: <ul style="list-style-type: none"> Suppliers perspective - presentation by Art.4.1(b) Privacy , Art.4.1(b) Privacy ZF Group. OEM perspective - presentation by Art.4.1(b) Privacy , Art.4.1 BMW(b) Fuels perspective - presentation by Art.4.1(b) Privacy , Art.4.1 (b) Total. Privac
10:05	Reflections from participants. <ul style="list-style-type: none"> Perspective from the Cabinet level and follow up questions. Reflections and questions from the industry participants.
