Brussels, 6 March 2020

Dear Mr. Sadauskas,

We are very pleased to present you with our new publication on the Circular Economy, entitled '**The Circular Economy: 15 innovative industry solutions that drive a sustainable future**'. The brochure aims to showcase a host of examples of good practices already implemented by AmCham EU member companies from across a wide range of sectors.

The brochure highlights the commitment of our member companies to transition towards a circular economy. It especially focuses on three pillars of circularity: (1) products that make use of recycled or secondary resources; (2) processes that enable the recycling of products or materials; and (3) services that contribute to attaining the circular economy in Europe and globally. Our publication concludes with sector-specific policy recommendations and calls for a business environment driven by innovation and competitiveness.

AmCham EU speaks for American companies committed to Europe on trade, investment and competitiveness issues. It aims to ensure a growth-orientated business and investment climate in Europe. AmCham EU facilitates the resolution of transatlantic issues that impact business and plays a role in creating better understanding of EU and US positions on business matters. Aggregate US investment in Europe totalled more than €2 trillion in 2018, directly supports more than 4.8 million jobs in Europe, and generates billions of euros annually in income, trade and research and development.

Our Environment Committee comprises companies committed to a sustainable transition towards a circular economy. The Committee works towards ensuring a single EU circular economy with consistent implementation across Member States, the development of necessary infrastructure and clarification of regulatory frameworks. Our work supports efforts to ensure that American companies, which contribute significantly to the EU's economy through high-skilled employment, substantive investments and generation/retention of technological innovations in the EU, have the opportunity to continue to participate in sustainability efforts across all levels of the value chain.

We very much hope that this publication can serve as a valuable resource for your work. Should you or your colleagues have any comments or be interested in hearing more about the examples and/or recommendations contained within the brochure, please do not hesitate to contact [REDACTED]

Yours sincerely,

[REDACTED]
