## **1. INTRODUCTION**

### **1.1. Nom**

Il s'agit d'un cas de test général destiné à être exécuté avant toute mise en production d'une nouvelle version.

### **1.2. Objectif**

L'objectif est de fournir un scénario de test. Ce scénario de test offre une garantie satisfaisante sur le fait que les grandes fonctions de l'application sont opérantes.

Ce scénario de test est complet en ce sens qu'il offre un parcours des grandes fonctions de l'application. Il n'est pas exhaustif car il ne traite pas toute la combinatoire offerte par l'application en termes de données d'entrée et de séquence d'actions.

Il est complémentaire d'une démarche de test spécifique à mettre en œuvre pour certaines parties de l'application ayant évolué.

Sauf indication particulière, il peut être exécuté par une personne n'ayant pas de connaissance préalable de l'application mais ayant une connaissance normale de l'utilisation de l'outil informatique.

### **1.3. Dépendances**

Ce test est conçu pour un utilisateur ayant au moins les droits :

- administrateur

## **2. APERÇU DU SCÉNARIO DE TEST**

Le scénario (Test case) est décomposé en différentes étapes qui sont à exécuter suivant la séquence ci-dessous.

Chaque étape est elle-même décomposée en étapes élémentaires. Chaque étape élémentaire peut recevoir le status OK (résultat attendu conforme) ou bien NOK (résultat attendu non-conforme).

Si une des étapes élémentaires reçoit le status NOK, il est demandé de continuer dans la mesure du possible de continuer à exécuter le scénario de test. Il se peut que cela soit impossible auquel cas le test est stoppé.

Le scénario est à exécuter avec les données nominales de test qui sont fournies.
