Dear [REDACTED],

I am available for a phone call Thursday 26 at your convenience.

Indeed, the High Council for Biotechnology has recently raised the question of the presence of teosinte in France in an opinion on the cultivation of maize 1507x59122 (see the attached document p. 34-35, only in French).

Best regards

Dear [REDACTED],

The Spanish competent authorities have recently informed us about the presence of teosinte (a wild relative of maize) in France, since 1990s.
We are interested in any relevant data and information from your side. Would it be possible to arrange a short telephone call, on this issue, this week?

Thank you very much in advance.

Best regards,
