Subject: Chemical Strategy - ChemSec input

Dear Mrs. Jorna,

The European Green Deal's upcoming Chemical Strategy for Sustainability will be an extremely important step towards a toxic-free circular and sustainable future. To boost EU- progressive business, many asking for stricter chemical regulation, as well to protect EU citizen and the environment from hazardous chemicals, the strategy must be ambitious. At ChemSec, we have put together a paper with following 5 key aspects to include in this strategy:

- Support EU industry frontrunners
- Speed up the regulatory processes and avoid "paralysis by analysis"
- Strengthening the balance between generic and specific risk management
- Increase transparency and traceability for a toxic-free circular economy
- Close existing legislative gaps

We hope you will take our views into account when giving input to the strategy.

ChemSec is a NGO aiming to reduce the use of hazardous chemicals by collaborating with companies and highlight success stories and possibilities to policy makers. Read more about our work here: <https://chemsec.org/>

If you have any questions regarding the topic above or other matters related to chemicals, circular economy and/ or progressive business asking for stricter chemical regulation, please feel free to contact us.

Kind regards,
