

# Terphenyl hydrogenated under REACH

Videoconference with the European Commission

24 April 2019

*THIS SLIDE AND THE FOLLOWING SLIDES REDACTED BECAUSE OUT OF SCOPE*

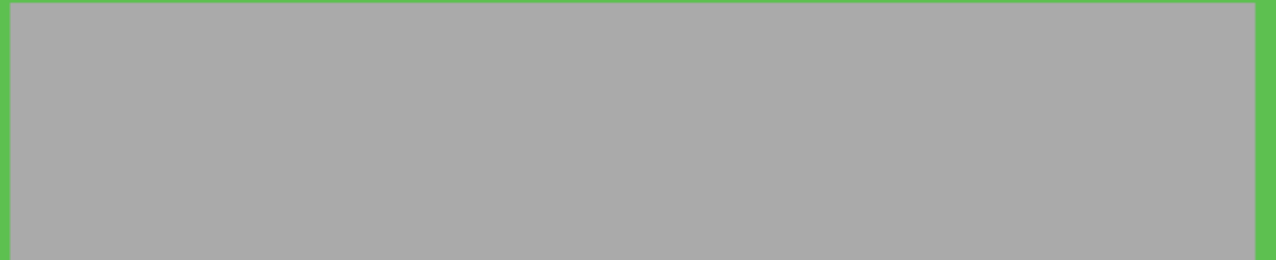

## **2. Exchange of views on EU chemicals policy**

# Chemicals Strategy for Sustainability

- We are closely following the ongoing policy debate on the Chemicals Strategy for Sustainability and are committed to supporting the Commission as we can, including by sharing our own experience.
- We are aware that the European Parliament is already working to adopt its own resolution on the Chemicals Strategy for Sustainability. We understand that the current draft supports further action on grouping, including based on function, in order to avoid regrettable substitution.
- We believe the Chemicals Strategy for Sustainability offers a good opportunity to highlight the benefits of functional grouping, building on existing practices, including for heat transfer fluids.
- *What are the Commission's views on functional grouping and the Chemicals Strategy for Sustainability? Is it one of the issues that the Commission is planning to cover in the Strategy?*
- *What are the next steps in the Commission's process to develop the Chemicals Strategy for Sustainability? How can we support you?*

# Thank you!
