Dear Frans Timmermans!!

I'm very proud over the new green ambition that I see in many different ways in EU!!

But I'm extremely worried about the taxonomi propasal as we saw it for some weeks ago - when we see the consequences for biomass and biofuels!!

All investments that we have done so far and the main reason to way we have reduce the emissions by 29% from 1990 will fall in value and feeling is that we have taken the wrong decisions! But without more biofuels the emission from fossil fules will increase!

Here is an artical that I wrote in "daily Industry" in sweden for some days ago.

I hope that we vill see un other language in the final proposal

Best regards and thanks for all god job!!
