Orgalim

[REDACTED]
[REDACTED]
[REDACTED]

- Orgalim has started with the introduction of two members of Orgalim's team, [REDACTED] and [REDACTED] that both will support the work of [REDACTED] in ST4.
- This call is a follow-up to the previous calls with Orgalim on the taxonomy framework. DG Grow expressed its engagement (with other DGs) aiming to support France/Hungary and the industry request to include the manufacture of electrical equipment in the first DA.

[REDACTED].
- Orgalim on current procedures for Taxonomy: Orgalim informed DG Grow that they are in touch with France and Germany, the two countries which were mostly interested for the inclusion of the electrical equipment sector in the first DA.
- Orgalim on the first DA: Orgalim has expressed its concerns regarding the reference on "the technical screening criteria for manufacturing low-carbon technologies and their key components that demonstrate substantial life-cycle GHG emission savings compared the best performing alternative technology/product/solution available in the market". Specifically, it has asked to include in this section of the first DA the term "when possible" stressing that the technologies are not always comparable to what exists in the market.
