Subject: Hydrogen in Horizon Europe - Strategic Plan 2020-2030

Dear Mr [REDACTED], dear [REDACTED],

As a follow-up to a previous meeting on the upcoming importance of hydrogen I come back to request a meeting with you.

We understand that DG RTD, DG MOVE, DG ENER, and DG CLIMA are actively working on the strategic planning of Horizon Europe in general and in particular on the clusters (1) Climate, Energy and Mobility and (2) Digital and Industry.

The Fuel cells and Hydrogen Industry and Research would like to contribute to these discussions with a few documents.

1. At the beginning of 2018, we produced a Strategic Plan 2020-2030 that we already shared with the Commission and which we re-attach for your convenience. This document explains why hydrogen and fuel cells are necessary to achieve the EU policy objectives, how innovation can be supported and why we believe this support should be coordinated by an institutional Public-Private Partnership.
2. We have now finalised detailed technology roadmaps which complement and detail our Strategic Plan.

These technology roadmaps set clear technology, cost and volumes objectives for 20 key applications that can be gathered around three interconnected pillars: Energy, Transport and Industry (Climate). We trust the Commission finds here valuable information for its strategic planning.

These roadmaps also attempt to describe the implications in terms of projects and possible support from Horizon Europe, CEF or the ETS Innovation fund. We are aware that the funding part of these roadmaps has limited value as long as it has not been discussed at length with the Commission. We believe, however, that it is our responsibility to put our views on paper to initiate that discussion.

We would be very keen to meet you and your services to present these roadmaps and discuss how they could be turned into a more common ambition.

Best regards,

[Redacted]
