Dear [REDACTED],

Thank you for your mail which I forward to my colleague in the cabinet of the Executive Vice President who follows the issue in question alongside Mrs Nelen.

Best Regards,

Riccardo Maggi
Member of Cabinet

European Commission
Cabinet of the Executive Vice President
For a European Green Deal

Subject: ENGIE green hydrogen projects - additionality criteria - modelling exercise

Dear Mrs. Nelen, Mr. Maggi,

I take the liberty to contact you as ENGIE is strongly involved in renewable hydrogen projects. We have a target of 4 GW electrolyser capacity by 2030, we are a member of the Clean

Hydrogen Alliance and have submitted several projects to the IPCEI and Innovation Fund processes.

Given our own project pipeline, we are following closely the discussion about additionality and further criteria for renewable hydrogen production. Very concretely, we have modelled and analyzed the impact of additionality, temporal and geographical correlation on the cost and feasibility of one of our projects called HY Netherlands (production of e-methanol from green hydrogen, 100 MW electrolyser in a first step with significant potential to upgrade).

We have already discussed our modelling results with DG ENER and DG GROW – both have signaled great interest and found this exercise very useful. We would appreciate the opportunity to present these results also to you.

Please let me know if you are interested and if you could free up a little space for a short presentation in your agendas (which are without any doubt very busy these days).

Looking forward to hearing back from you.

Kind regards
Annette Kroll
