# **S4P4** MATHEMATICS SYLLABUS SECONDARY 4th YEAR

**4 period/week course**

---

**JOINT TEACHING COMMITTEE**

**Meeting on 4 and 5 February 2010**

---

**Proposal: entry into force in September 2010**

## ALGEBRA (for guidance: 60 periods)

TOPIC	KNOWLEDGE & SKILLS	USE OF TECHNOLOGY
<b>Basic Calculations</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- do basic calculations (+, −, x and /) over the sets <math>\mathbb{N}</math>, <math>\mathbb{Z}</math> and <math>\mathbb{Q}</math></li> <li>- verify calculation rules and properties established in years 1, 2 &amp; 3 and use them in simple algebraic expressions</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- handle basically a calculator</li> <li>- transform a fraction into a decimal and vice versa</li> <li>- manage approximate and exact mode calculation</li> <li>- calculate lcm and hcf</li> <li>- simplify and factorise numerical expressions</li> <li>- use the calculator for controlling results</li> </ul>
<b>Square Roots and a new set of numbers</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise problems leading to square roots</li> <li>- solve <math>x^2 = a</math>; <math>a \in \mathbb{N}</math>; <math>x \in \mathbb{N}</math></li> <li>- give the definition of <math>\sqrt{a}</math></li> <li>- understand the idea of roots</li> <li>- recognise that squaring and square rooting are inverse operations</li> <li>- calculate the square roots of perfect squares (between 1 and 400) without a calculator</li> <li>- understand that <math>\sqrt{2} \notin \mathbb{Q}</math> and recognise other irrational numbers</li> <li>- understand that it is necessary to define the set of real numbers <math>\mathbb{R}</math></li> <li>- realise that <math>\mathbb{N} \subset \mathbb{Z} \subset \mathbb{Q} \subset \mathbb{R}</math></li> <li>- know that all arithmetic rules in <math>\mathbb{Q}</math> apply in <math>\mathbb{R}</math></li> <li>- apply the following: <ul style="list-style-type: none"> <li>• <math>\sqrt{a}\sqrt{b} = \sqrt{ab}</math>; <math>\frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}}</math> for <math>a \in \mathbb{R}^+</math>, <math>b \in \mathbb{R}^+</math></li> <li><math>\sqrt{n^2 m} = n\sqrt{m}</math> for <math>n \in \mathbb{N}</math>, <math>m \in \mathbb{N}</math></li> </ul> </li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- solve by trial <math>x^2 = a</math>, <math>a \in \mathbb{R}^+</math></li> <li>- calculate the square root of a number</li> <li>- approximate a number in the decimal form</li> <li>- approximate a number as a fraction</li> <li>- show properties of square roots</li> <li>- simplify expressions involving square roots</li> </ul>

TOPIC	KNOWLEDGE & SKILLS	USE OF TECHNOLOGY
	<ul style="list-style-type: none"> <li>e.g. <math>\sqrt{12} = 2\sqrt{3}</math></li> <li><math>\sqrt{a^2} =  a </math> for <math>a \in \mathbb{R}</math></li> </ul> <p>- calculate also more difficult expressions like  <math>(3\sqrt{2} + \sqrt{12})^2; (\sqrt{2} + 3\sqrt{5})(-1 + \sqrt{2})</math></p>	
<b>Linear dependency and proportionality: 1<sup>st</sup> degree functions and equations</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise that one value depends on another value and define a function accordingly</li> <li>- write the equation of and recognise a linear function <math>y = mx + p</math></li> <li>- transform an equation <math>ax + by = c</math>, (<math>b \neq 0</math>) in the form <math>y = mx + p</math> and the converse</li> <li>- recognise that the graphical representation of <math>ax + by = c</math> is a straight line and the converse</li> <li>- understand the meaning of <math>m</math> and <math>p</math></li> <li>- define geometrically <math>m</math> and <math>p</math></li> <li>- find algebraically and geometrically the zero (root) of a linear function</li> <li>- recognise real problems which lead to such functions</li> <li>- make equations from simple problems</li> <li>- solve linear equations</li> <li>- understand that the equation <math>ax + by = c</math>, with <math>a</math> and <math>b</math> non-zero, has an infinite number of solutions</li> <li>- give a geometric interpretation of such equations</li> <li>- recognise real problems which lead to such equations and solve them without a calculator</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw the graph of a linear function</li> <li>- operate the transformation <math>ax + by = c \Leftrightarrow y = mx + p</math></li> <li>- find the equation of a linear function given its graph</li> <li>- use sliders to vary <math>m</math> and <math>p</math></li> <li>- find the intersection point with the x-axis given the graph and given the equation of a linear function</li> <li>- plot a set of <math>(x, y)</math> values and the graph of a linear function according to them</li> <li>- solve equations</li> <li>- solve equations step by step and check solutions</li> <li>- verify results by use of a calculator</li> </ul>

<b>Simultaneous equations of the type:</b> $\begin{cases} ax + by = c \\ dx + ey = f \end{cases}$	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise real problems which lead to simultaneous equations</li> <li>- solve simultaneous equations geometrically</li> <li>- solve simultaneous equations by substitution and/or elimination methods</li> <li>- check solutions</li> <li>- solve real problems without a calculator</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw the graph of two linear functions</li> <li>- solve simultaneous equations</li> <li>- solve simultaneous equations step by step</li> <li>- check solutions</li> </ul>
<b>Polynomials</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise polynomial expressions and calculate their value</li> <li>- handle algebraic expressions with powers and recognise equivalent expressions</li> <li>- add and multiply algebraic expressions with powers</li> <li>- simplify and order polynomial expressions</li> <li>- add and multiply polynomials in one variable</li> <li>- handle simple factorisation</li> <li>- apply the special identities:  <math>(a \pm b)^2 = a^2 \pm 2ab + b^2</math>  <math>(a + b)(a - b) = a^2 - b^2</math>  <math>(a \pm b)^3 = a^3 \pm 3a^2b + 3ab^2 \pm b^3</math> </li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- calculate the numerical value of an algebraic expression by substituting given numerical values to the variables</li> <li>- simplify expressions involving powers</li> <li>- simplify algebraic expressions</li> <li>- factorise algebraic expressions</li> <li>- expand the expression <math>(a + b)^n</math> and calculate coefficients of Pascal's triangle</li> </ul>

## STATISTICS (for guidance: 18 periods)

TOPIC	KNOWLEDGE & SKILLS	USE OF TECHNOLOGY
<b>Collect, organise and analyse data</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise populations and samples in everyday life situations</li> <li>- recognise discrete and continuous data</li> <li>- determine frequencies from collected raw data</li> <li>- establish a table of frequencies</li> <li>- convert frequencies into percentages and the converse</li> <li>- establish the range of a set of data</li> <li>- form equal classes intervals</li> <li>- establish a table of cumulative frequencies</li> <li>- calculate the arithmetic mean and the median</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- insert data into a spreadsheet</li> <li>- order data in a table of frequencies</li> <li>- use a calculator to convert frequencies into percentages and the converse</li> <li>- find the minimum and the maximum value of a numerical set of data</li> <li>- define and name a variable</li> <li>- calculate cumulative frequencies</li> <li>- calculate the arithmetic mean and the median</li> </ul>
<b>Representation of data</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw a frequency graph</li> <li>- represent data by bar charts and histograms</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- use a calculator to plot a graph</li> <li>- represent data on pie charts, by bar charts and histograms</li> </ul>
<b>Interpret and compare data</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- read off data from a diagram</li> <li>- interpret a data diagram and determine the arithmetic mean, median, mode, interquartile range (IQR) from a frequency graph</li> <li>- use percentages to compare data</li> <li>- develop caution in interpreting data and misuse of statistics</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- calculate the IQR</li> <li>- discuss dispersion by comparing graphs</li> </ul>

## GEOMETRY (for guidance: 50 periods)

TOPIC	KNOWLEDGE & SKILLS	USE OF TECHNOLOGY
<b>Basic Geometry</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw geometric figures such as triangles, quadrilaterals and regular polygons on paper</li> <li>- verify that the perpendicular bisectors of a triangle meet in one point</li> <li>- show the same for the altitudes (heights), the angle bisectors and the medians of a triangle</li> <li>- verify the expected sum of the angles of a triangle, a quadrilateral and a polygon</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw geometric figures on the calculator</li> <li>- measure lengths and angles</li> <li>- define a variable</li> <li>- construct perpendicular and parallel lines</li> <li>- verify properties in specific geometric situations</li> </ul>
<b>Right-Angled Triangles</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise the following 4 properties of right-angled triangles: <ul style="list-style-type: none"> <li>a) they possess two complementary angles</li> <li>b) the length of the median line extended from the right-angle is equal to half the hypotenuse</li> <li>c) the centre of the hypotenuse is the centre of the circumscribed circle of the triangle</li> <li>d) the hypotenuse is the diameter of the circumscribed circle</li> </ul> </li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- verify these properties using construction and measurements</li> </ul>

<b>Pythagoras Theorem</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise Pythagoras' Theorem</li> <li>- prove Pythagoras' Theorem</li> <li>- understand that there are different ways to prove Pythagoras' Theorem</li> <li>- apply Pythagoras' Theorem to problems in two dimensions</li> <li>- recognise real problems and apply Pythagoras' Theorem</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- verify the theorem using <ul style="list-style-type: none"> <li>• sides length measurements</li> <li>• area measurements</li> </ul> </li> </ul>
<b>Circles</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- give the definition of a circle</li> <li>- draw a circle, a sector, an arc, a chord</li> <li>- define the sector of a disc, the arc of a circle and a chord</li> <li>- apply the formulae to calculate the circumference of a circle and the length of an arc</li> <li>- apply the formulae to calculate the area of a disc and of a sector of a disc</li> <li>- recognise tangents to circles and how lines intersect or completely avoid circles</li> <li>- recognise properties of right-angled triangles inscribed in a circle</li> <li>- recognise that the angle from a chord to the centre of a circle is double than the angle made at the circumference</li> <li>- recognise that all angles made from a chord to the circumference of a circle are equal</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- calculate the length of a circle</li> <li>- calculate the area of a disc</li> <li>- find out by dynamical procedure some properties of triangles inscribed in a circle</li> <li>- verify by measuring angles</li> <li>- verify by measuring angles</li> </ul>

<b>Enlargement</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- enlarge (and reduce) geometrically</li> <li>- determine the scale factor of an enlargement</li> <li>- explain and recognise invariants of enlargements</li> <li>- determine the effect of enlargement on angles</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- draw simple enlargements</li> <li>- find out the scale factor using variables and sliders</li> <li>- verify invariants by measurements</li> </ul>
<b>Similar triangles</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- recognise congruent and similar triangles</li> <li>- recognise the connection between parallel lines and the constant ratio of the segments of all lines cutting these parallel lines (intercept Theorem)</li> <li>- recognise the intercept theorem when working with triangles</li> <li>- link the intercept theorem with enlargements</li> <li>- recognise the converse of the intercept theorem</li> <li>- apply the intercept theorem to calculate lengths and to prove lines are parallel</li> </ul>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- use constructions and measurements to verify lengths</li> <li>- use dynamical procedures to prove the theorem using variables and sliders</li> <li>- use constructions and measurements to verify lengths</li> </ul>
<b>Plane Sections of Solids</b>	<p><i>Pupils must be able to and/or understand:</i></p> <ul style="list-style-type: none"> <li>- apply Pythagoras' Theorem and the intercept theorem to plane sections of solids</li> <li>- calculate the internal diagonal of a cube or cuboid, the edges of a pyramid or the height of a cone with particular angles</li> <li>- recognise and solve real problems</li> </ul>
