Stakeholder(s)	Renault
Representative(s) of stakeholder(s)	Jean-Christophe Kugler, [REDACTED]
DG GROW representatives	G. Cozigou, [REDACTED], [REDACTED]
Representatives of other DGs	-

Summary of meeting

Renault is enthusiastic about the changes but need to have certainty on the future regulations.

On RDE3:

They were worried about the introduction dates of PN (particle number) measurements because they believe that there is not enough time to adapt all existing vehicles into the new limits with RDE within 2 years with acceptable quality. Explanations were provided by the Commission on all the decisions taken for PN, including margins of measurement and the dates, which were already in the regulations since 2012. Renault offered to provide the Commission with data that show that dates could create an issue with quality.

The Commission expressed its worries that the Type Approval proposal is still delayed in the EP and Council. Collaboration with Renault in developing the GEAR2030 is very good.
