Subject: RE: Possible meeting on boric acid

Dear ,

Many thanks for the information you sent us on the use of boric acid in the electroplating industry. Concerning the public consultation, the part on socio-economic aspects was not in the COM public consultation website, because it was held in parallel to ECHA public consultation on the prioritisation results, and it was then in the ECHA website. In any case, the information you sent us will be taken into account.

On your request for a meeting, I would propose to have it once you have the results from the literature review.

Regards
