Subject: RED2 - Green Hydrogen & Co-Processing

Dear Dominique –

It was good to meet again this morning; many thanks for your comprehensive overview and insights. Also, congratulations with your extension in the position! It is good to see continuity of your leadership of the Department.

As mentioned this morning, the attached letter is on its way to you and highlights our belief that Green Hydrogen and Co-Processing can make important contributions to decarbonising the energy mix in transportation.

To help encourage investment in these areas and reduce regulatory uncertainty, we believe there are a couple of articles in the proposed legislation that could benefit from additional clarity. We have indicated these articles in our letter, together with some small proposed solutions that would give this clarity.

Have a great weekend!

With best regards,

[REDACTED]
