12:45	<i>Lunch (Piccola Mensa)</i>	
14:00	<i>Bus transfer to airports</i>	

Expert Presentations

Trendwatching

In order to be better prepared for the (near) future, the FIOD started project Trendwatching at the end of 2012. This project aims to identify trends in fraud.

The results are used for renewing policies, developing new investigative themes, developing future scenarios and /or advising our partners.

Belastingdienst/FIOD/ Strategische OpsporingsInformatie, The Netherlands

The Monitoring of the Internet (Open Source Intelligence) within the Austrian Ministry of Finance

Austrian Ministry of Finance, Austria

Elements of Assessment on Individuals' Radicalization and Influence on Facebook, Twitter and Instagram

In general, most individuals are involved in conducting different online and offline activities, to various extents. While researching virtual communities established on social media networks, law enforcement agencies have the opportunity both to analyze online activity and, following the identification of the main actors, assess the degree of radicalization and their ability to influence other individuals they are connected to.

A thorough analysis aimed at assessing the degree of radicalization by studying online behavior, and estimating the influence on other users should be conducted in order to examine an individual's online activities, especially if there are no evident signs of extremism.

Romanian Intelligence Service, Romania

Session Descriptions

EMM End-to-End

This track is aimed at participants who have *no previous experience* in using tools of the EMM platform.

This track contains a number of practical activities addressing the main concepts of the EMM platform. Participants will be guided through the NewsBrief website to browse the information already available.

Afterwards they will start from a new problem statement (case study) to conceive and define EMM categories using the Category Editor. The definitions will be applied to the EMM platform and the results will be analysed using the NewsDesk tool. A number of media monitoring products will be prepared including: reports/newsletters, SMS and EMAIL notifications.

EMM Coaching

This track is aimed at participants who have previous experience with EMM or attended a previous EMM user workshop.

The idea is that the participants will work on case studies and we will coach them along the way. Doing this we will demonstrate advanced concepts of the tool platform as requested by the participants.

For example we could cover the use of the EMM NewsDesk management console (workgroup managers):

- Managing workgroup resources.
 - Target audience: workgroup managers, users that are in charge of configuring and maintaining a NewsDesk workgroup (managing users accounts, adding/removing newsletters, etc.)
 - Topics: global workgroup settings, users management, newsletters management, feed directory definition, Category Editor access rights management, adding/removing address books.
- Creating workgroups (system administrators):
 - Target audience: System Administrators, users in charge of a NewsDesk site (multiple workgroups).
 - Topics: creating workgroups. Assigning system resources to workgroups.

OSINT Suite Related Sessions

Data Acquisition

- Web Search
- Web Crawling
- File Import

Entity Extraction

- Name Variant Database
- Custom Entity Types

Entity Extraction Advanced

- Import Custom Name Variants
- Custom Entity Types based on Regular Expressions

Scripting Data Export & Reporting

- Export Data using Reports
- Export Files

Case Studies

- User provided Case Studies
