- The main obstacle remains the issue of **nuclear safety**. I appreciate Belarus' constructive cooperation. As a next step, I encourage you to propose a concrete follow-up plan with ENSREG and to ensure that at least the key safety recommendations are implemented before commissioning of the nuclear power plant. Background

[REDACTED]

[REDACTED]

The main disagreement on **nuclear safety** is about the scope and timeline for implementation of the Ostrovets Nuclear Power Plant stress test peer review recommendations [REDACTED]

[REDACTED]. ENSREG/COM team visited Minsk on 9-10 March. The mission was positive and able to note that Belarus had made better than anticipated progress on addressing the key safety recommendations that should be implemented before commissioning. **In a letter to be sent to DFM Kravchenko soon**, ENER asks that Belarus proposes a concrete plan for technical follow-up with ENSREG and/or peer review by ENSREG of the National Action Plan.
