Production of a forgery-proof vaccine passport

Arnsberg, Germany, 26.2.2021

Dear Ms Kyriakides,

One of the next goals during the Corona pandemic will be to facilitate the return of **EU citizens** to their pre-Corona lives.

In addition to digital solutions, this will necessitate the adoption of a **forgery-proof vaccine passport** in some fields.

Our company has been active in the field of security printing for 80 years (bank passbooks) and we have now used this expertise to develop such an anti-counterfeit vaccine passport.

We believe that such a document should not only be safe but also be mass-producible at an **attractive price-performance ratio**. We have taken these criteria into account when developing our **prototype** which we are sending to you today.

The newly developed vaccine passport incorporates **several safety features**. Thus, e.g., the pass is copy-proof, the personal data cannot be manipulated afterwards and various elements that are invisible to the naked eye have been used (they become visible under UV light, similar to banknotes).

We would be very happy if you would consider us as **prospective partners**, whether it be to develop our idea further - potentially as hybrid solution, in conjunction with, for instance, a QR-code reader - or as producer of printed vaccine passports.

We will be pleased to answer any questions you may have.

Best regards and many thanks,

F. W. Becker GmbH
