MEETING DOCUMENT

From: General Secretariat of the Council
To: Working Party on Energy

Subject: REPowerEU Directive - 4column document

In view of the Energy Working Party on 2 February, delegations will find in the annex the 4column document on the REPowerEU Directive.

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Directive (EU) 2018/2001 on the promotion of the use of energy from renewable sources, Directive 2010/31/EU on the energy performance of buildings and Directive 2012/27/EU on energy efficiency (Text with EEA relevance)

2022/0160(COD)

	<p>achieve the Union’s greenhouse gas emissions reduction target³. In this context, the Commission proposed in July 2021, as part of the package delivering on the European Green Deal, to double the share of renewable energy in the energy mix in 2030 compared to 2020, to reach at least 40%. The REPowerEU Communication⁴ outlined a plan to make the EU independent from Russian fossil fuels well before the end of this decade. The Communication foresees front-loading of wind and solar energy, increasing the average deployment rate as well as additional renewable energy capacity by 2030 to accommodate for higher production of renewable hydrogen. It also invited the co-legislators to consider a higher or earlier target for renewable energy. In this context, it is appropriate to increase the Union renewable energy target up to 45% in order to significantly accelerate the current pace of deployment of renewable energy, thereby speeding up the phase-out of EU’s dependence by increasing the availability of affordable, secure and sustainable energy in the Union.</p> <p>1. Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).</p>	<p>achieve the Union’s greenhouse gas emissions reduction target³. Recital 3a				
13a		<p><u><i>(3a) The general context created by Russia's invasion of Ukraine and the effects of the COVID-19 pandemic has led to a surge in energy prices across the Union, thus highlighting the need to accelerate energy efficiency and increase the use of renewable energy in the Union. In order to achieve the long-term objective of an energy system that is independent of third countries, the Union should focus on accelerating the green transition and ensuring an emission-reducing energy policy that reduces dependence on imported fossil fuels and establishes fair and affordable prices for Union citizens and enterprises in all sectors of the economy.</i></u></p>

The introduction of shorter and clear deadlines for decisions to be taken by the authorities competent for issuing the authorisation for the renewable energy installations on the basis of a complete application, will accelerate the deployment of renewable energy projects. The time during which the plants and their grid connection are built should not be counted within these deadlines except if it is covered by a decision	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
	outside those areas.	projects, for which deadlines can be particularly streamlined (renewables go-to <u>acceleration</u> areas), and projects located outside those areas.	period by the competent authorities. It is appropriate however to make a distinction between projects in areas particularly suitable for the deployment of renewable energy projects, for which deadlines can be particularly streamlined (renewables go-to areas), and projects located outside those areas. The particularities of offshore renewable energy projects should be taken into account when setting the deadlines.	
Recital 7				
17	(7) Some of the most common issues faced by renewable energy project developers relate to procedures established at national or regional level to assess the environmental impact of the proposed projects. Therefore, it is appropriate to streamline certain environmental-related aspects of the permit-granting procedures and processes for renewable energy projects.	(7) Some of the most common issues faced by renewable energy project developers relate to <u>complex and lengthy administrative, permitting and grid connection</u> procedures established at national or regional level <u>and a lack of sufficient staffing and technical expertise in permitting authorities</u> to assess the environmental impact of the proposed projects. Therefore, it is appropriate to streamline certain environmental-related aspects of the permit-granting procedures and processes for renewable energy projects. <u>Further, it is also appropriate to ensure that energy system operators support an efficient deployment of renewable</u>	(7) Some of the most common issues faced by renewable energy project developers relate to procedures established at national or regional level to assess the environmental impact of the proposed projects. Therefore, it is appropriate to streamline certain environmental-related aspects of the permit-granting procedures and processes for renewable energy projects. ⁵ 5. Delegations are informed that this recital would be replaced by recital 10a as agreed by the TTE Council as part of the General Approach on the Renewable Energy Directive.	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
		<p><u><i>energy projects through the procurement of flexibility services in line with the provisions of the Regulation (EU) 2019/943 and the Directive (EU) 2019/944.</i></u></p>		
Recital 7a				
17a		<p><u><i>(7a) Complex, lengthy and opaque administrative procedures have a disproportionate impact on citizens, local authorities and SMEs, acting as renewables self-consumers individually or through aggregators and renewable energy communities. This is often due, in particular, to a lack of experience or expertise, financial and human resources to navigate permitting and grid connection processes. It is necessary to make it easier for non-professional and non-commercial market actors to successfully navigate obtaining relevant approvals. This should be facilitated by simplification, where necessary, as well as dedicated windows where these actors do not have the same capacity as other professional well-resourced market participants. The integrated multilevel planning and mapping of renewable energy, should reflect the local planning and mapping carried out at local and regional level as well as identify the</i></u></p>

		<u>short term.</u>		
Recital 21a				
31a		<p><u>(21a) Heat pumps are a technology to produce renewable heating and cooling from ambient energy, including from wastewater treatment plants, and geothermal energy. They also allow the use of waste heat and cold for heating and cooling. The rapid deployment of heat pumps, which mobilises under used renewable energy sources such as ambient energy, geothermal energy, self and waste heat from industrial and tertiary sectors, including data centres, makes it possible to replace natural gas and other fossil fuel-based boilers with a renewable heating solution, while increasing energy efficiency. This will accelerate a reduction in the use of natural gas for the supply of heating, both in buildings as well as in industry. In order to accelerate the installation and use of heat pumps, it is appropriate to introduce targeted shorter permit-granting procedures for such installations, including a simplified procedure for grid connection of smaller heat pumps unless no such procedure is required by national law. A quicker and easier installation of heat pumps, the</u></p>

34a		<u><i>(24a) Providing incentives for solar energy through grants and other support schemes should not preclude the sale of such energy onto the grid from private, commercial, and agricultural sources.</i></u>		
Recital 24b				
34b		<u><i>(24b) The agricultural sector can play a key role in the energy transition of rural areas and within rural communities, especially given the decentralised production. The possibility of producing solar energy as a secondary activity should therefore not be limited to self-consumption, but could be considered in combination, for example, with other types of production. Member States should encourage farmers, through targeted funding mechanisms, to deploy on-farm solar installations,</i></u>		

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
		<p><u>in particular the development of agri-solar projects on new agricultural buildings, and the production of biomethane in order to allow for the wider development of renewable energies while ensuring additional income for farmers. There is high potential of small-scale on-farm energy production installations to increase the on-farm circularity by transforming the waste and residual streams of the farm, such as manure, into heat and electricity, and it is important to promote and encourage farmers to invest in those technologies. Grid reinforcement in rural areas should be strongly encouraged so that farms can actually fulfil their potential contribution to the energy transition through decentralised electricity production. Geographical locations with high levels of irradiance should be prioritised as raw materials for solar panels are a limited resource. Additionally, farmers and their representative organisations should be involved in the designation of acceleration areas.</u></p>
