| Description                                          | <p>The Bidirectional Austrian Czech Interconnection (BACI) will be a new infrastructure directly connecting the Austrian and Czech market. It will be connected to the existing Czech transmission system via CS Břeclav (NET4GAS s.r.o.) and to the Austrian transmission system via Baumgarten (GAS CONNECT AUSTRIA GmbH). The project BACI will enable capacity transmission for the first time between these two EU member states and it will facilitate better market integration between Austria and the Czech Republic. The project BACI will also increase the overall flexibility of the Czech, Austrian and also Polish system by diversification of gas supply routes and by connecting UGSs in the Czech Republic and Austria.</p> |                              |                |

| Main Driver Explanation | Market Integration |

## Benefit Description

The project BACI will ensure transmission capacity between the two member states and will facilitate better market integration and security of gas supply also for adjacent countries. It contributes to the diversification of gas supply and the increased transportation opportunities to and from countries like Hungary, Poland, Germany, Italy, France, Slovenia, Croatia and Slovakia and access to new and existing trading markets. The project BACI will enhance the market development due to access to underground gas storages both on the Austrian and Czech side and therefore will enhance the market development by providing peak regulation and the flexibility of gas flow. The project BACI is a key element in creating a well-functioning internal market in the CEE region due to access to existing and new import infrastructures such as a new LNG terminal in Poland and Croatia, Nord Stream and unconventional gas sources. With the project BACI the CEE region would become less vulnerable to a supply

| Description                                          | <p>The objective of the planning project "TAG Reverse Flow" is to create a reverse flow on the TAG GmbH pipeline system with three project variations: 1a Reverse Flow by upgrading existing entry DZK capacity to entry FZK capacity at the IP Arnoldstein/Tarvisio and additionally by allowing potential entry FZK capacity at the IP Ceršak/Murfeld. Physical interconnection capacity via an exit from the TAG GmbH pipeline system to the Gas Connect Austria GmbH subsystem PVS-AZ1. 1b Reverse Flow by upgrading existing entry DZK capacity to entry FZK capacity at the IP Arnoldstein/Tarvisio. Physical interconnection between the TAG pipeline system to the Gas Connect Austria subsystem PVS-AZ1. Further, the project shall also enable a physical connection at the IP Baumgarten at the Austrian/Slovakian boarder by upgrading existing backhaul capacity "Exit Baumgarten" to FZK capacity "Exit Baumgarten" of TAG GmbH. 1c This variation of the project is a combination of project variation 1a and 1b.</p> |                       |              |

| Main Driver Explanation | The planning project was triggered by an obligation arising out of the decree of the Austrian regulatory authority, E-Control related to the Coordinated Network Development Plan 2016-2025, whereas a reverse flow of the TAG pipeline system shall be assessed by also taking into consideration potential entry FZK capacity at the IP Ceršak/Murfeld. As a consequence, TAG GmbH also assesses an upgrade of existing entry DZK capacity to entry FZK capacity at the IP Arnoldstein/Tarvisio and, correspondingly, an upgrade of existing backhaul capacity "Exit Baumgarten" to FZK capacity "Exit Baumgarten" of TAG GmbH in its projects variations. |

| Description                                          | <p>The timetable for reducing L-gas exports from the Netherlands to Belgium, France and Germany was announced by the Dutch authorities at the end of 2012: the gradual reduction of L-gas exports to Belgium (and therefore to France as L gas is also exported to France), will begin in October 2024 and end in 2030. The reason behind this announcement is the forecasted decline of the L-gas Groningen gas field (10%/year production decline expected as from 2020). Most of the L-gas used in France transits through Belgium meaning that L-gas transit capacity need to be ensured until conversion is done in France. For the Fluxys Belgium grid, infrastructure modifications will be required to transport H gas to the newly converted L zones in Belgium and in NW Europe.</p> |                              |                |

| Description                                          | <p>Given the contracted capacities on the Terminal for the current installations on the one hand, and on the other hand the growing small scale LNG market, with amongst others the LNG bunker vessel from Engie/Mitsubishi/NYK/Fluxys which will be operational from end 2016, and will be operating from Zeebrugge Port, LNG feeder contracts for supply to Scandinavia, more and more commercial vessels converting to LNG, the Clean Power for Transport directive imposing to make LNG available in all seaports, etc, Fluxys LNG is evaluating in all domains (commercial and technical) the need and the possibilities to construct a 3rd Jetty, dedicated for small scale LNG ships as to support the realization of the directive. The purpose of this 3rd Jetty would be to serve LNG ships from the smallest size of about 2.000 m<sup>3</sup> up to about 30.000 m<sup>3</sup>.</p> |              |              |

| Description                                          | <p>IBS aims at connecting the national gas transmission networks of Bulgaria and Serbia. It will be implemented in 3 stages. 1st: a pipe will be built from Novi Iskar to Kalotina, BG (62.2 km) and from Nis to Dimitrovgrad, SR (108 km), with capacity from BG to SRB - 1,0 bcm/year, and from SRB to BG - 0.15 bcm/year. 2nd: the capacity will be increased from BG to SRB to 2,4 bcm/year, and from SRB to BG to 0,95 bcm/year, and later to 1,5 bcm/year, by construction of 2 CSs (20 MW each) and 2 new gas pipeline sections (from G Bogrov CS to N Iskar – 19 km and from V. Orašje to Nis – 161 km). 3rd: by construction of the looping VS Batulsi - G Bogrov CS (62 km) the capacity from BG to SRB will be increased to 3,2 bcm/year. In the direction from SRB to BG the construction of the pipeline Batajnica - V Orašje (116 km) will ensure transmission of 2 bcm/ year, and the construction of CS Batočina (20 MW) will increase the capacity from 2.0 bcm/year to up to 2.5 bcm/y.</p> |                       |          |

### Expected Gas Sourcing

Caspian Region, LNG (GR)

### Benefits

Main Driver Others

Main Driver Explanation

Benefit Description The project should enhance the system flexibility and contribute to the security of supply within the region (increased interconnection between Bulgaria and Serbia)

| Main Driver Explanation | UGS Chiren has been the only gas storage on the territory of Bulgaria for 40 years. It is a key instrument for the functioning of the gas market in Bulgaria, covering seasonal fluctuations in natural gas consumption in the country by securing the necessary flexibility caused by the differences between the supplies and consumption and ensures emergency reserve. UGS Chiren is a crucial instrument ensuring the security of gas supplies. In the medium term UGS Chiren promises to become a commercial facility with a significant role in competition development in the regional gas market and in provision of additional flexibility of the gas transmission systems at regional level, with a significant contribution to congestion management and seasonal optimization of use of the gas transmission systems. |
| Benefit Description     | The project for its expansion aims on one hand at creating conditions to ensure security of supplies to Bulgarian users and users in the countries from the region, and on the other - UGS Chiren development as commercial gas storage in an interconnected regional and Europe-wide market, as UGS Chiren is an integral part of the plans for development of the regional gas system consisting of interconnections, LNG terminals, storage facilities.                                                                                                                                                                                                                                                                                                                                                                         |

| Description                                          | <p>Construction of new onshore gas pipeline in the section between the village of Losenets and the Bulgarian-Turkish border in the region of the village of Strandja in parallel to the existing transit gas pipeline of about 76 km length on Bulgarian territory, diameter of the pipe 700 mm and capacity of about 3 bcm/y at operating pressure 64 bar. A compressor station Losenets – 2 near the existing compressor station in the region of the village of Losenets is also envisaged to be built. The project, as part of the priority Southern Gas Corridor is crucial in terms of security and diversification of the sources and routes of natural gas supply to/through Bulgaria and the region. Its implementation is directly related to achievement of the conditions required for creation of a competitive gas market, increase of systems' flexibility and market integration.</p> |                              |                     |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific Criteria Fulfilled Comments | ITB is a pivotal part of a larger gas markets integration strategy that includes interconnection projects Bulgaria-Romania, Bulgaria-Serbia, Romania-Hungary. The implementation of the project and the addition of alternative sources of gas in the region will promote the market integration of the region and the development of more infrastructures in the area and specifically in the countries mentioned above. The project will allow to alleviate to a great extent the dependency of countries in the area in a single import source/counterpart. ITB will definitely provide additional capacity in relation to national and regional N-1, considering that it will supply additional quantities of gas from an alternative route for alternative sources and counterparts to an area in urgent need of diversification. Considering that Bulgaria and the region are heavily dependent on gas imports from a single source, the diversification that ITB provides in all three (route, source and counterparts) will p |

| Description                                          | The construction of a new (second) gas storage is envisaged on the territory of Bulgaria. It could be constructed in suitable geological structure –depleted gas fields (onshore or offshore), salt caverns or aquifer. It must however be kept in mind that the construction of a new underground gas storage from the start of the geological and research activities to its commissioning could take not less than 7-8 years. |                         |                |

| Main Driver Explanation | <p>The construction of a new gas storage on the territory of Bulgaria is one of the stages of the concept for expansion of storage capacity in our region (PCI Cluster 6.20 Increase storage capacity in South-East Europe) - the Balkans, East and South-East Europe, aimed to increase storage capacity, ensure gas transmission systems' flexibility, enhance market integration and guarantee the security of supply to the Bulgarian and regional natural gas market. Ensuring additional storage capacity is important in terms of the expected additional natural gas quantities in the context of the gas infrastructure development in the country and the region. The new gas storage would serve not only the national, but also the regional gas market after the planned construction of the new interconnections with the neighbouring countries and will serve as a tool to enhance security of gas supply.</p> |
| Benefit Description     | <p>The construction of a new gas storage on the territory of Bulgaria is one of the stages of the concept for expansion of storage capacity in our region (Cluster 6.20 Increase storage capacity in South-East Europe), aimed to increase storage capacity, ensure gas transmission systems' flexibility, enhance market integration and guarantee the security of supply to the Bulgarian, Greek, Turkish, Macedonian and Romanian as well as the rest of the regional natural gas market - the Balkan peninsula and Central-East Europe and South-East Europe.</p>                                                                                                                                                                                                                                                                                                                                                          |

Rehabilitation, Modernization and Expansion of the NTS

| Description                                          | <p>A multicomponent project which consists of different actions for rehabilitation, modernization and expansion of the existing gas transmission infrastructure in Bulgaria and includes activities on: CSs modernization, inspections, repair and replacement of pipeline sections, expansion of the existing network and implementation of systems for optimization of the management process of the network technical condition. Taking into account the complex nature of the project, a 3 phases implementation is envisaged: Phase 1: Unifies the actions undertaken in the period 2013-2015, planned to be finalized in a short term and funded with BTG own resources. Phase 2: Includes actions planned to be initiated in 2016. They represent logic continuation of the overall realization of the project following the implementation of Phase 1. Phase 3: Conditional infrastructure necessary after taking the FID for stage 2 of the Interconnection Bulgaria – Serbia.</p> |                              |                     |

| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Specific Criteria Fulfilled Comments | The modernization, rehabilitation and expansion of the existing gas transmission infrastructure will guarantee secure and reliable natural gas transmission, enhance the efficiency, reliability and flexibility of the transmission system and provide the required capacities and pressures. The implementation of the activities planned will secure the technical capabilities for transmission of additional natural gas quantities through the territory of the country, coming in through the existing and new entry and exit points, and opportunities for diversification of the directions of transmission depending on the market interest. |

| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Main Driver Explanation | <p>With the implementation of the project improvement of the transmission system’s efficiency, reliability and flexibility will be achieved, ensuring the necessary capacities and pressures including pressure recovery, bottlenecks removal, providing technical capabilities for transmission of additional natural gas quantities through the territory of the country, in relation to the planned new entry and exit points and opportunities for diversification of the transmission directions depending on the market interest and last but not least management optimization of the gas flows and setting the facilities meeting the ecologic requirements. Thus the technical and economic parameters of the existing gas infrastructure which has been in operation for forty years now will be improved.</p>                                                                                                                                                             |
| Benefit Description     | <p>The project implementation will contribute to increasing the degree of market integration, creating a competitive gas market, encouraging the trade development, ensuring greater systems’ flexibility, risk management optimization. It is directly related to the planned new interconnections with Greece (IGB), Romania (IBR), Turkey (ITB) and Serbia (IBS) and with the use of the UGS Chiren’s capacity in relation to the project for its expansion, most of them labeled as PCIs, and with the development of the significant cross-border gas projects in the region. Their efficient use is related to the technical capacities of the existing gas transmission infrastructure on the territory of Bulgaria to ensure sufficient capacity and adequate technical conditions for the transport of the planned new natural gas quantities. The project was supported at the highest political level, as well as at regional level – it is a priority CESEC project.</p> |

Interconnector Greece-Bulgaria (IGB Project)

|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                 |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                         |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                         |
| Specific Criteria Fulfilled Comments | As regional gas interconnector, IGB will bring benefits on all criteria, an in particular will secure new gas sources and market integration in a SEE region, suffering from a high level of dependency on single source of imports and lack of regional cross-border gas interconnections. |

**Time Schedule**

|                        |         |
|------------------------|---------|
| Grant Obtention Date   |         |
| Delay Since Last TYNDP | 2 years |

Delay Explanation                      Extension in permitting procedures for authorization of construction and of regulatory TPA procedure for new gas infrastructure

**Expected Gas Sourcing**

Algeria, Caspian Region, LNG (QA,US)

**Benefits**

|                         |                                                                                                                                                                                                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                     |
| Main Driver Explanation | Schedule towards commissioning will be affected by binding requests from shippers                                                                                                                 |
| Benefit Description     | IGB development is not associated with a specific supply source. The pipeline can interact with alternative supply sources - such as, Southern Corridor pipeline gas, LNG through Greece/ Turkey. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                                                                                            |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory      | The regulatory framework has to provide more streamlined process for decisions on TPA regime and licencing, and ensure a viable rate of financial return from the investment.                                                                                                                                                                          |
| Permit Granting | Affected by delays                                                                                                                                                                                                                                                                                                                                     |
| Political       | Government support expected on issues such as streamlined permitting and regulatory decisions on commercial development, availability of financial incentives                                                                                                                                                                                          |
| Market          | Development of the networks of neighboring gas TSOs to be interconnected with IGB should be incentivised to ensure proper technical conditions for expected additional flows. Better integration of the gas transmission networks in the overall region affected by IGB must also be achieved in order to supply gas from IGB to the wider SEE region. |

A project for the construction of a gas pipeline BG-RO

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                              |                     |

| Description                                          | <p>The project is part of the concept for coordinated development of gas transmission networks of Bulgaria, Romania and Hungary (transport corridor Bulgaria-Romania-Hungary-Austria), designed for the bi-lateral natural gas transport between the countries. The project on the territory of Bulgaria includes the construction of a new infrastructure and modernization and expansion of the existing network in order to increase the capacity of interconnectivity of the northern semi-ring of the national gas transmission network of Bulgartransgaz EAD and the gas transmission network of Transgaz S.A., Romania. The implementation of the Bulgarian section together with the existing gas transmission infrastructure is expected to ensure the technical possibilities for supply of natural gas between 3 - 5 bcm/y between the planned entry points on Bulgaria's southern border and between Romania and Hungary, with an opportunity for access to the Central European gas market.</p> |                              |                     |

| Benefit Description     | <p>The project is part of the concept for coordinated development of the gas transmission networks of Bulgaria, Romania and Hungary (transmission corridor Bulgaria-Romania-Hungary-Austria) designed for a bi-direction natural gas transport. The realization of the Bulgarian section together with the existing gas transmission system is expected to secure the technical possibility for natural gas supplies between 3-5 bcm/y between the planned entry points on the Bulgarian southern border and Romania and Hungary providing an opportunity to access the Central European Gas market. The project will enhance market integration and competition and guarantee the SoS at regional level.</p> |

| Description                                          | <p>Looping to CS Valchi dol – line valve Novi Iskar: Modernisation of the national gas transmission network norther semi-ring with the construction of 383 km looping with a diameter of Dn 700 from CS Valchi dol to line valve Novi Iskar. The realization of the project will ensure new exit capacity of 4 bcm/y (128,3 GWh/d) in the direction to Romania (through IBR) and Chiren UGS (for transmission during injection and withdrawal amounting to 500 mcm/y). In the context of the European objectives to build an interconnected and single pan-European marker, the realization of the presented projects, forming the gas hub concept, is in line with the projects for the development of the Southern gas corridor and in full compliance with the plans for development of gas infrastructure in Europe to enhance the security of supply and the diversification of natural gas supply sources.</p> |                       |              |

Main Driver Explanation The concept for the creation of gas hub on the territory of Bulgaria is based on the idea significant quantities of natural gas from different sources to enter into a given real physical point in the region of Varna for their further transport and a venue for gas trade is organized at the same time at this point – a hub where every market participant could trade in gas. The idea of building the gas hub is supported by the strategic geographic location of Bulgaria, the well-developed existing gas infrastructure for transmission and storage and the projects for the construction of interconnections with Romania, Turkey, Greece and Serbia.

Benefit Description The creation of a gas hub aims at building the gas transmission infrastructure required to link the natural gas markets for the EU members states in the region - Bulgaria, Greece, Romania, Hungary, Croatia, Slovenia and through them to the members states from Central and Western Europe and to the countries from the Energy Community - Serbia, Macedonia, Bosna and Herzegovina and others, thus contributing to achieving the main priorities of the European energy policy. In the context of the European objectives to build an interconnected and single pan-European market, the realization of the projects, forming the gas hub concept, is in line with the projects for the development of the Southern gas corridor and in full compliance with the plans for development of gas infrastructure in Europe to enhance the security of supply and the diversification of natural gas supply sources.

| Specific Criteria Fulfilled Comments | The concept for the creation of gas hub on the territory of Bulgaria is based on the idea significant quantities of natural gas from different sources to enter into a given real physical point in the region of Varna for their further transport and a venue for gas trade is organized at the same time at this point – a hub where every market participant could trade in gas. The idea of building the gas hub is supported by the strategic geographic location of Bulgaria, the well-developed existing gas infrastructure for transmission and storage and the projects for the construction of interconnections with Romania, Turkey, Greece and Serbia. |

**Expected Gas Sourcing**

Caspian Region, Russia, LNG (), Southern gas corridor gas sources; European gas hubs; Black sea shelf gas; Domestic production;

**Benefits**

Main Driver Regulation SoS

Main Driver Explanation The concept for the creation of gas hub on the territory of Bulgaria is based on the idea significant quantities of natural gas from different sources to enter into a given real physical point in the region of Varna for their further transport and a venue for gas trade is organized at the same time at this point – a hub where every market participant could trade in gas. The idea of building the gas hub is supported by the strategic geographic location of Bulgaria, the well-developed existing gas infrastructure for transmission and storage and the projects for the construction of interconnections with Romania, Turkey, Greece and Serbia.

Benefit Description The creation of a gas hub aims at building the gas transmission infrastructure required to link the natural gas markets for the EU members states in the region - Bulgaria, Greece, Romania, Hungary, Croatia, Slovenia and through them to the members states from Central and Western Europe and to the countries from the Energy Community - Serbia, Macedonia, Bosna and Herzegovina and others, thus contributing to achieving the main priorities of the European energy policy. In the context of the European objectives to build an interconnected and single pan-European market, the realization of the projects, forming the gas hub concept, is in line with the projects for the development of the Southern gas corridor and in full compliance with the plans for development of gas infrastructure in Europe to enhance the security of supply and the diversification of natural gas supply sources.

Construction of a Looping CS Provadia – Rupcha village

Main Driver Explanation The concept for the creation of gas hub on the territory of Bulgaria is based on the idea significant quantities of natural gas from different sources to enter into a given real physical point in the region of Varna for their further transport and a venue for gas trade is organized at the same time at this point – a hub where every market participant could trade in gas. The idea of building the gas hub is supported by the strategic geographic location of Bulgaria, the well-developed existing gas infrastructure for transmission and storage and the projects for the construction of interconnections with Romania, Turkey, Greece and Serbia.

Benefit Description The creation of a gas hub aims at building the gas transmission infrastructure required to link the natural gas markets for the EU members states in the region - Bulgaria, Greece, Romania, Hungary, Croatia, Slovenia and through them to the members states from Central and Western Europe and to the countries from the Energy Community - Serbia, Macedonia, Bosna and Herzegovina and others, thus contributing to achieving the main priorities of the European energy policy. In the context of the European objectives to build an interconnected and single pan-European market, the realization of the projects, forming the gas hub concept, is in line with the projects for the development of the Southern gas corridor and in full compliance with the plans for development of gas infrastructure in Europe to enhance the security of supply and the diversification of natural gas supply sources.

## Eastring - Bulgaria

| TRA-N-654                                            | Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Pipeline including CS | Non-FID      |

| Description                                          | <p>Project Description: Eastring-SK is subproject located in Slovakia/Ukraine and is essential part of the Eastring project, which connects IP Veľké Kapušany at the SK-UA border, with a new entry IP at an external border of the EU on the territory of Bulgaria in the following routing options: – from SK to RO – via UA, (exist. pipeline) – via HU, (new pipeline). – from RO to TR – Option A – new pipeline passing production &amp; storage area and continuing to IP Isaccea and to BG/TR border by utilizing existing RO-BG transit assets – Option B – new pipeline, passing 2 production &amp; storage areas and continuing to an external border of the EU on the territory of Bulgaria. The project would (i) secure supplies in case of RU disruption and therefore it will increase gas SoS in the broader Central-South-East EU region, (ii) allow access to alternative gas sources for Central, Western &amp; Southern Europe and (iii) mean step towards EU single gas market.</p> |                       |              |

| Main Driver Explanation | The project brings significant benefits to the SoS of Europe bringing the increasing new sources of gas supply in South Eastern Europe to the markets of Central and Western Europe, while further enhancing the market integration of the affected countries.                                                                                                                                                                                                                                                                           |
| Benefit Description     | Comments Benefits: - Physical alternative for providing 100% of all Balkan countries' consumption; - Providing security of supply for 100% of all Balkan countries' consumption; - Additional utilization for CZ, SK, PL, UA, RO, BG transit and storage assets; - Providing Western shippers with possibility to supply Balkan countries and even Turkey from NCG/Gaspool/Baumgarten; - Corridor ready for future gas imports to Europe from alternative sources – AGRI, TANAP, Caspian, Iran, Iraq, Egypt, Israel, Cyprus, Turkey etc. |

| Description                                          | <p>The generic renamed gas PCI that is promoted by the MECIT and supported by Cyprus and Greece Governments is currently known as « 7.3.2 Removing internal bottlenecks in Cyprus to end isolation and to allow for the transmission of gas from the Eastern Mediterranean region». The shorter name /acronym for this PCI could be «CyprusGas2EU».The Cyprus Gas2EU project was formerly known as Mediterranean Gas Storage and it currently involves 7 technological options. The 7 technological options for removing internal bottlenecks in Cyprus and allow the transmission of gas from the Eastern Mediterranean region are the following: 1) Cyprus Gas Pipeline (from Aphrodite to Vasilikos), 2) FLNG (small scale) at the Aphrodite, 3) FSRU for LNG imports to Cyprus (security and diversification of supply), 4) Pipeline from Aphrodite to Egypt, 5) EastMed Pipeline (cross-border pipeline from Cyprus to Greece via Crete), 6) LNG Storage (Mediterranean Gas Storage), 7) CNG</p> |                       |              |

|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU, Project concerns investment in reverse flow capacity, Project aims at supplying directly or indirectly at least two Member States |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                            |
| Specific Criteria Fulfilled Comments | The project will contribute to market integration as it will enable Cyprus to connect with the European gas network. It will improve Cyprus's security of energy supply and diversification of imported energy sources and fuels. The project will support objectives of sustainability as it will contribute to the reduction of GHG emissions in the island and prepare a low carbon economy.                                                                |

| Description                                          | <p>The Bidirectional Austrian Czech Interconnection (BACI) will be a new infrastructure directly connecting the Austrian and Czech market. It will be connected to the existing Czech transmission system via CS Břeclav (NET4GAS s.r.o.) and to the Austrian transmission system via Baumgarten (GAS CONNECT AUSTRIA GmbH). The project BACI will enable capacity transmission for the first time between these two EU member states and it will facilitate better market integration between Austria and the Czech Republic. The project BACI will also increase the overall flexibility of the Czech, Austrian and also Polish system by diversification of gas supply routes and by connecting UGSs in the Czech Republic and Austria.</p> |                       |          |

| Benefit Description     | <p>The BACI will ensure transmission capacity between the two member states and will facilitate better market integration and security of gas supply also for adjacent countries. It contributes to the diversification of gas supply and the increased transportation opportunities to and from other countries in CEE region and access to new and existing trading markets. The BACI will enhance the market development due to access to UGSs both on the Austrian and Czech side and therefore will enhance the market development by providing peak regulation and the flexibility of gas flow. The BACI is a key element in creating a well-functioning internal market in the CEE region due to access to existing and new import infrastructures such as a new LNG terminal in Poland and Croatia, Nord Stream and unconventional gas sources. With the BACI the CEE region would become less vulnerable to a supply disruption through Ukraine and Belarus and therefore the region will have an increase of security of supply.</p> |

| Description                                          | The Project aims to interconnect the existing transmission systems in the Czech Republic (South Bohemia Region) and Austria (Oberösterreich Region). The realization of this Project will connect the southern branch of the Czech transmission system close to the Záboří town with the Penta-West pipeline as well as with the West Austria Gasleitung (WAG) pipeline close to the IP Oberkappel. |                       |              |

| Main Driver Explanation | Market Integration |

Benefit Description

The main benefits of the project are: (a) to interconnect CZ and AT grids for further market integration and to provide more capacity between these markets; (b) implementation of the project could remove possible physical congestions on WAG and MEGAL-South; (c) increase of security of supply by enhancing the rate of interconnection of the existing transmission grids and connecting large UGS in Austria and Germany.

| Description                                          | <p>The Project will be a part of the Czech and Polish transmission system and will increase a cross-border capacity between these two countries by establishing a large transportation corridor that will allow a flexible bidirectional transport of gas in the Central Europe in direction North-South. The development of the physical interconnection between Poland and the Czech Republic will contribute to reinforcement of the effective operation of the gas transmission systems, efficient gas exchange between the markets, it will increase security of supply not only in Poland and the Czech Republic, but also in the whole CEE region by enabling the supply link with the European gas market and global LNG market via the Terminal in Świnoujście and furthermore it will increase competition in the region. In the Czech Republic the Project is consisted of the following sub-projects: 1) Poland-Czech Republic Interconnector (STORK II) and 2) Tvrdonice-Libhošť pipeline (including upgrade of CS Břeclav).</p> |                              |                |

| Benefit Description     | <p>The Project benefits are: (a) The Project aims to increase the cross-border capacity between Poland and the Czech Republic by establishing a large transportation corridor that will allow for flexible transport of gas in Central Europe in direction North-South; (b) Implementation of the Project will increase the security of gas supply and provide the overall flexibility for the CEE region and diversify the supply routes for the CEE region; (c) Improve European gas grid interconnection; (d) Increase the security and reliability of the cross-border gas transmission between the Czech Republic and Poland (fulfilment of N-1 rule in Poland); (e) Create a robust, well-functioning internal market in the Czech Republic and Poland and promote the competition; (f) Contribute to the creation of the integrated and competitive gas market in CEE region.</p> |

| Description                                          | <p>The project Capacity4Gas (C4G) represents 3 specific projects, which deal with increase of cross-market capacities at 3 different borders and were developed in the context of a non-binding market survey performed at the beginning of 2016. The market survey was focused on an assessment of the need for new transmission capacity between the Czech Republic and adjacent market areas. The 3 projects are (1) C4G – DE/CZ, i.e. entry capacity increase between DE (Gaspool) and CZ, (2a) C4G – CZ/SK, i.e. exit capacity increase between CZ and SK, (2b) C4G – CZ/AT, i.e. exit capacity increase between CZ and AT. The projects (2a) and (2b) are alternatives.</p> |                              |                |

| Description                                          | <p>The project Capacity4Gas (C4G) represents 3 specific projects, which deal with increase of cross-market capacities at 3 different borders and were developed in the context of a non-binding market survey performed at the beginning of 2016. The market survey was focused on an assessment of the need for new transmission capacity between the Czech Republic and adjacent market areas. The 3 projects are (1) C4G – DE/CZ, i.e. entry capacity increase between DE (Gaspool) and CZ, (2a) C4G – CZ/SK, i.e. exit capacity increase between CZ and SK, (2b) C4G – CZ/AT, i.e. exit capacity increase between CZ and AT. The projects (2a) and (2b) are alternatives.</p> |                              |                |

| Description                                          | <p>The project Capacity4Gas (C4G) represents 3 specific projects, which deal with increase of cross-market capacities at 3 different borders and were developed in the context of a non-binding market survey performed at the beginning of 2016. The market survey was focused on an assessment of the need for new transmission capacity between the Czech Republic and adjacent market areas. The 3 projects are (1) C4G – DE/CZ, i.e. entry capacity increase between DE (Gaspool) and CZ, (2a) C4G – CZ/SK, i.e. exit capacity increase between CZ and SK, (2b) C4G – CZ/AT, i.e. exit capacity increase between CZ and AT. The projects (2a) and (2b) are alternatives.</p> |                       |          |

| Description                                          | The project includes reversing of CS Hgelheim as well as the construction of a deodorisation plant near the German-Swiss border, to allow gas coming from south Europe to be transported through the CBP Wallbach. Additionally, an upgrading of the flow patterns of the CS Mittelbrunn and modifications to all necessary installations to ensure the by-directionality of the TENP-pipeline will be necessary. Fluxys TENP & Open Grid Europe will both take part in the commercial operation after completion of the project. |                       |          |

| Main Driver Explanation | SoS and market demand to the same extent. |

## Benefit Description

The purpose of the pipeline is to link areas of high demand in Germany and further westwards with liquid gas sources in and through Austria (IP Überackern/Burghausen, Penta-West, WAG, MEGAL, Hub CEGH Baumgarten). It increases the flow capacity between NCG and the Austrian market area and therefore contributes to market integration and more competition by diversifying sources and routes. Moreover the pipeline will provide better access of large storages located in Austria (Haidach and 7Fields) to Germany. This connection will contribute to structure and substitute gas supply resulting from the decreasing L-Gas supply in Germany. The project therefore also contributes to Security of Supply. Finally the project serves capacity demands of existing and planned gas fired power plants in Bavaria functioning as a base load capable back up for renewables contributing to the goal of Sustainability in Europe.

|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | <u>Market Demand</u>                                                                                                                                                                                                                                                                                  |
| Main Driver Explanation | <u>Changeover of regions currently supplied by low-calorific gas to high-calorific gas due to declining availability of low-calorific gas</u>                                                                                                                                                         |
| Benefit Description     | Availability of low-calorific gas is declining in Germany. The regions currently supplied by low-calorific gas will need to switch supply from low-calorific gas to high-calorific gas. The project is needed to transport high-calorific gas to the regions currently supplied by low-calorific gas. |

Advanced

Description

It connects NOS2 with PL, NL, CZ, GP and NCG and increases the security of supply based on the market survey MORE CAPACITY ([www.more-capacity.eu/en](http://www.more-capacity.eu/en))

Regulatory Decisions and similar material conditions

on basis of the unit investment costs according to ACER and when not available internal cost estimations - these are preliminary costs representing the current cost estimations (04/2016) - ([http://www.acer.europa.eu/official\\_documents/acts\\_of\\_the\\_agency/publication/uic%20report%20-%20gas%20infrastructure.pdf](http://www.acer.europa.eu/official_documents/acts_of_the_agency/publication/uic%20report%20-%20gas%20infrastructure.pdf)).

Capacity Increments Variant For Modelling

| Main Driver Explanation | <p>This project EUGAL (<a href="http://www.eugal.de">www.eugal.de</a>) is based on the market survey MORE CAPACITY (<a href="http://www.more-capacity.eu/en">www.more-capacity.eu/en</a>) to determine the need for new transport capacities for H gas at the boundaries of the GASPOOL market area. This project connects several existing and new interconnection points.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Benefit Description     | <p>Europe needs additional capacities for transporting natural gas. A Europe-wide survey in the summer of 2015 identified that there is a long-term need for the European gas pipeline link EUGAL. In particular the Czech Republic and Poland, but Austria as well, will need more natural gas in future from Western European pipeline systems. The demand for natural gas that is to be supplied from east to west will increase sharply by 2040. We need new transport routes and higher capacities to satisfy the wishes of consumers in these countries. The EUGAL is therefore an economically sensible outcome of various scenarios for expanding the German and European natural gas pipeline network. (<a href="https://www.eugal.de/en/eugal-pipeline/why-a-new-pipeline/">https://www.eugal.de/en/eugal-pipeline/why-a-new-pipeline/</a>)</p> |

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | <u>Market Demand</u>                                                                                                                                                                                                                                                                              |
| Main Driver Explanation | See National Development Plan of Germany 2016 - project number: 408-01 Erweiterung Anlandestation Lubmin European gas demand, e.g. due to necessity of changeover from low-calorific to high-calorific gas.                                                                                       |
| Benefit Description     | See National Development Plan of Germany 2016 - project number: 408-01 Erweiterung Anlandestation Lubmin This project would be required to cover the growing European demand for high-calorific gas, caused among others by necessity of changeover from low-calorific gas to high-calorific gas. |

| Description                                          | New Compressor Station in the south of Hamburg for the evacuation of gas volumes from Russia via Nord Stream to Germany (GASPOOL). The project does not create increases in capacity on an IP by itself, but is a prerequisite for the transport of new capacities into the market area regarding a planned project within the scope of "more capacity", which includes e.g. the extension of the Receiving Terminal Greifswald. Common project of Gasunie Deutschland Transport Services GmbH, Fluxys Deutschland GmbH and NEL Gastransport GmbH. |                       |          |

**Expected Gas Sourcing**

Russia

**Benefits**

Main Driver Market Demand

Main Driver Explanation European gas demand, e.g. due to necessity of changeover from low-calorific to high-calorific gas.

Benefit Description This project would be required for compression and further transport of additional gas from Russia via Nord Stream pipelines to Germany. In combination with other infrastructure projects (e.g. Extension Receiving Terminal Greifswald) the project is required to cover the growing German demand for high-calorific gas, caused among others by necessity of changeover from low-calorific gas to high-calorific gas.

Transport of gas volumes to the Netherlands

| Description                                          | The gas pressure reduction and metering stations at Groß Körís and Kienbaum will be upgraded to Vn 2 Mio. m <sup>3</sup> /h and Vn 1,7 m <sup>3</sup> /h respectively. The transmission pipeline Sayda - Deutschneudorf will be upgraded to DN 800, DP84. The compressor station Sayda will be upgraded to an inlet pressure pmin = 41 bar, outlet pressure pmax = 84 bar and throughput Vn 700 Tm <sup>3</sup> /h. The pressure transfer to/from FGL 218 (DN 600, DP 84) will be upgraded to MOPu 84 bar and MOPd 55 bar. These investments will create additional exit capacity to Czechia (at Deutschneudorf IP) and Poland (Lasow IP) for transit/transmission of natural gas arriving in Germany via Nord Stream 2. |                              |                |

| Description                                          | <p>This is a mirror project for the Baltic Pipe promoted by Gaz-System S.A. Entry/Exit is Dragør in Denmark and Niechorze in Poland. The identified, feasible infrastructure solution is a 3-10 bcm/y upstream connection from the Northsea gas-fields to Deanmark with transport through the Danish transmission system to Entry/Exit point of Baltic Pipe and further transport through Baltic Pipe to Niechorze (entry/exit) in Poland. In accordance with the ongoing feasibility study, Energinet.dk's mirror project is: - capacity increment – 306.8 GWh/d (10 bcm/y) from DK=&gt;PL and 91.1 GWh/d (3bcm/y) from PL =&gt; DK - year of commissioning – 2022 - FID status – no - PCI status – yes</p> |                              |                     |

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                      |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | Lack of confidence and risk-taking in the private gas sector as it requires coordinated long-term business cases, fundamental change in current business models/subsidies and involves many parties from three countries. In addition this project must be coordinated with a connection from Norwegian Gassled to Denmark's gas infrastructure. |

|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| PCI Benefits                         | Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU, Project aims at supplying directly or indirectly at least two Member States                                                                                                               |  |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                             |  |
| Specific Criteria Fulfilled          | Competition, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                 |  |
| Specific Criteria Fulfilled Comments | SoS storage possibility for Estonia and Finland if needed. Diversification of sources, routes and counterparties for the whole region. Sustainability is improved by switching from high emissions fuels to NatGas, the adoption of biogas as well as the spot supply necessary for load balancing power plants is facilitated. |  |

#### Time Schedule

|                        |                |
|------------------------|----------------|
| Grant Obtention Date   |                |
| Delay Since Last TYNDP | <i>2 years</i> |

Delay Explanation

Due to political uncertainties with regard to the existence of competing Regional Baltic LNG terminal projects on the PCI list. There is an MoU between the Estonian and Finnish states as well as Gasum and Alexela (parent group for Balti Gaas) signed on 28th February 2014 and facilitated by the European Commission. The outcome of the process cleared, when the Finngulf project by Gasum was withdrawn from the list of PCIs in October 2015, which meant the regional terminal will be built in Estonia. The project is technically ready for construction, but no FID can be taken before the competing projects issue is solved (two competing projects in Estonia).

**Expected Gas Sourcing**

LNG (?), Terminal operator is not responsible for LNG sourcing. This is done by terminal clients (TPA). The terminal has LNG quality a

**Comments about the Third-Party Access Regime**

The regulatory scheme applicable to this project is unclear. Since the project has a PCI label, and thus would have significant cross-border impact, the regulatory scheme must be acceptable to all concerned regulators. Additionally, the regulation for LNG terminals in the project country (Estonia) does not yet exist.

**Benefits**

|                         |                                                                                                                                                                                                                      |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                       |
| Main Driver Explanation | The region as a whole is an energy island with Russia as the only counterpart and supply source for gas. An LNG import and re-gasification terminal would provide alternative sources as well as storage capability. |
| Benefit Description     | Additionally the terminal is capable of servicing the potential Baltic bunkering demand as well as provide alternative fuel to road and rail transport in the affected countries.                                    |

**Barriers**

| Barrier Type    | Description                                                                               |
|-----------------|-------------------------------------------------------------------------------------------|
| Regulatory      | Regulatory framework for LNG facilities in Estonia is insufficient to clarify this point. |
| Permit Granting | Long process                                                                              |
| Political       | The assesment methods of competing PCI projects is not well established.                  |
| Market          | Lack of market maturity                                                                   |
| Financing       | Amortization rates                                                                        |
| Regulatory      | Lack of proper transposition of EU regulation                                             |

**Intergovernmental Agreements**

| Agreement                                    | Agreement Description                                            | Is Signed | Agreement Signature Date |
|----------------------------------------------|------------------------------------------------------------------|-----------|--------------------------|
| Agreement between PMs of Estonia and Finland | Agreement in regards to the gas infrastructure in the countries. | Yes       | 17/11/2014               |
| Memorandum of Understanding                  | MoU between Estonia and Finland and LNG project promoters        | Yes       | 28/02/2014               |

Balticconnector

| TRA-N-895                                            | Project                                                                                                                                                                                                                                                                                                                                                                                        | Pipeline including CS | Non-FID  |

| Specific Criteria Fulfilled Comments | The purpose of the Balticconnector natural gas pipeline project is to interconnect the Finnish and Estonian natural gas transmission networks and improve the energy security of the Baltic-Finnish region. The integration of the Finnish and Estonian gas infrastructures will ensure a more coherent and diverse natural gas transmission network in the Baltic Sea region, guarantee the security of natural gas supply for the north-eastern Member States of the EU by lifting Finland out of the current energy isolation and enhance EU energy solidarity by providing needed technical implementations for energy independence. The projects also target increased regional cooperation and have a strong focus on consumers and vulnerable energy customers. The aim is to move to Finnish-Baltic single entry-exit zone, which has been identified as the best fit solution in the "Baltic regional gas market study". |

| Main Driver Explanation | Balticconnector will lift Finland out of the current energy isolation and will provide Finland an opportunity to join in the European single gas market and to terminate the derogations on the EU gas market legislation. |
| Benefit Description     | Project has several qualitative and quantitative benefits, such as increase in energy security, price convergence in the region, development of the energy market etc.                                                     |

| Update Date                                          | 15/07/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                       | Advanced |
| Description                                          | <p>The project composes of implementation of reverse flow in Karksi metering station in Estonia and of a compressor station in Puiatu, Estonia. The reverse flow gas measuring station would be erected to the location of the existing measuring station in Karksi. Karksi reverse flow enables the measuring of gas quantities thru Estonia with the main advantages of reverse flow used after the commissioning of the Balticconnector offshore pipeline. Karksi reverse flow enables the full use of Inculkalns UGS for all the market participants. Puiatu compressor station enables the transportation of gas thru Estonia and the Balticconnector offshore pipeline to the Finnish gas market. The current system design does not enable the full use of the planned offshore pipeline without a compressor station in south of Estonia. Puiatu compressor station is an integral part of the physical implementations needed for market integration between the Baltics and Finland.</p> |                       |          |
| Regulatory Decisions and similar material conditions | <p>The Regulators of Finland (Energiavirasto ) and Estonia (Konkurentsiamet) have made a common CBCA decision for the Balticconnector and Estonia-Latvia interconnection project.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                       |          |

|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                              |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                      |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                      |
| Specific Criteria Fulfilled Comments | The projects also target increased regional cooperation and have a strong focus on consumers and vulnerable energy customers. The aim is to move to Finnish-Baltic single entry-exit zone, which has been identified as the best fit solution in the "Baltic regional gas market study". |

**Benefits**

|                         |                                                                              |

| Update Date                                          | 10/06/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |              | Non-Advanced |
| Description                                          | <p>Conventional LNG import terminal (bunkering, break-bulk, on-grid and off-grid land transportation) for improving Baltic as well as Finnish security of supply and serving commercial customers. The project includes 6x800 m3 pressurized bullets, connection to the existing berth (LOA 198 m; depth - 11 m), 2x100m3/h truck loading rack and connection to the low pressure natural gas distribution network located about 1 km from terminal site, covering about 60% of Estonian gas demand. And one to four flat bottom storage tanks with the total LNG storage capacity of 50 000 m3 to 320 000 m3, with second connection to the berth (LOA 365m depth -17m) capable of handling any size LNG carrier on the market, connection to DN711 (MOP 54 bar) national high pressure grid located about 13 km from the terminal site. Rail shunting tracks are 200m. Current scope is envisaged to 160 000 m3 (2x80 000 m3 tanks) with 4 bcma connection to the national high pressure grid. (grid connection on separate CAPEX).</p> |              |              |

| Delay Since Last TYNDP | Two years delay    |
| Delay Explanation      | Permitting process |

#### Comments about the Third-Party Access Regime

The current Spanish system allows Negotiated and Regulated regimes but, for the moment, only regulated storages are granted.

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Main Driver Explanation | As explained above this project is focused in increasing market integration between Spain and France (and indirectly with Portugal), enhancing diversification of supply and security. It will also improve sustainability and competition.                                                                                                                                                                                                                                                                                                                                                               |
| Benefit Description     | As above mentioned, this project will improve capacity of the MIDCAT interconnection between France and Spain and the Barcelona Regas Terminal (interconnectivity and diversification of supply). Besides, it will increase security from interruptions of supply or defaults in the infrastructure. By increasing flexibility of the gas system it will help renewals development, reduce emissions and increase sustainability. It will also help diversification of supplies in Europe (increasing capacity of Barcelona Regas Terminal and future MIDCAT interconnection) and commercial competition. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                     |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Long timig administrative and environmental permitting process, several Administrations involved with not well defined competence distribution lead to incertitude of obtaining all the authorisations required |
| Political       | Various Administrations involved (starte, regional and local) with different political composition and having differnet competences/opinions about the benefits and withdrawals of the Project                  |

South Transit East Pyrenees (STEP) - ENAGAS

| Specific Criteria Fulfilled Comments | This project was not simulated in PS-CBA of TYNDP 2015. Nevertheless, its benefits are expected to be similar to the ones of Full MidCat. ENTSOE PS-CBA demonstrated visible benefits for this project: • A better market integration of the Iberian Peninsula will be traduced by a price convergence between Spain and France • Regarding competition, this project will improve the possibility to take benefit from a cheaper LNG price or Algerian gas. • At EU level, it can be considered as a way to reduce the dependency from RU gas and therefore to improve the overall security of supply. • This project improves the CO2 emissions in several cases by making the gas cheaper than coal and replacing coal in specific zones. |

| Main Driver Explanation | This project was part of the "Iberian-French corridor-Eastern Axis-Midcat Project" which was included in the PCI list adopted by the European Commission the 18th of November 2015. This project will clearly improve the integration of the Iberian Peninsula with the rest of EU reducing its isolation from the EU gas markets, and helping to the price convergence of Iberian and EU gas markets.                                                                |
| Benefit Description     | According to the conclusions of the study developed by Ramboll, requested by the European Commission within the High Level Group on Interconnections for South-West Europe, MidCat is justified as it will integrate the Iberian gas market with the rest of the EU. In this study, it is also concluded that a stepwise implementation of the interconnector is possible, when accepting that mostly interruptible capacity will be available after the first stage. |

**Barriers**

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | In 2010, Enagás, TIGF and GRTgaz carried out an OS to ask for binding commitments for capacities provided by MidCat and/or Irún/Bariatou and GRTgaz North-South link. Concerning MidCat, none of the three proposed infrastructure scenarios received enough bids to be triggered. This OS is currently the latest call made to the market regarding MidCat. However, MidCat has demonstrated benefits in terms of market integration (price convergence), security of supply and diversification of supply. Taking into account that the OS2015 was carried out in a context of economic prosperity in comparison with the current situation jointly with the new tendency in contracting capacity (from long term to short term) well as the decrease in gas consumption, it is not foreseen that network users would make enough long-term commitments in order to fully cover the investment. Besides, recent changes in the Spanish regulatory framework would not contribute to have an appropriate rate of return of the investments |
| Market       | In the Open Season launched in 2010 between Spain and France MidCat didn't obtain enough market support .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Regulatory   | Low rate of return                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Market       | Lack of market support                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**PCI Details**

PCI Benefits: Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity

General Criteria Fulfilled

Yes

Specific Criteria Fulfilled

Market Integration, Security of Supply

Specific Criteria Fulfilled Comments

The project is important for the integration of the Portuguese market at Iberian and European level, improving competition and providing shippers with access to alternative balancing gas. From the point of view of security of supply, the 3rd Interconnection Portugal-Spain is necessary to improve the N-1 criterion fulfilment (Regulation (EC) N° 994/2010) for the Portuguese natural gas system, considering the total failure of the most important supply infrastructure of the network - the LNG Terminal in Sines - during a day of exceptionally high gas demand occurring with a statistical probability of once in 20 years, as defined in the Regulation.

**Expected Gas Sourcing**

Algeria, LNG ()

**Benefits**

Main Driver

Others

Main Driver Explanation

Integration of the Iberian Peninsula gas market with the rest of Europe

Benefit Description

The development of this project is linked to the development of a new interconnection between France and Spain by Spanish infrastructure promoters.

**Barriers**

Barrier Type

Description

Regulatory

It would be difficult to carry out an Open Season due to the size of the Portuguese market and the lack of long-term contracts in Portugal. The lack of long term binding commitments from network users cannot guarantee the return of the investment to the Spanish system.

Others

It would be difficult to carry out an Open Season due to the size of the Portuguese market and the lack of long-term contracts in Portugal. The lack of long term binding commitments from network users cannot guarantee the return of the investment to the Spanish system.

| Main Driver             | <i>Market Demand</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Main Driver Explanation | <i>We consider that a growing amount of flexibles volume will be available. These volume will allow more competitiveness in the south region but will required more regas capacity as well as a strong logisitcal support (jetty + tank) to allow the shipper to take advantage of spot market opportunity by buying/unloading and reselling/reloading according to the stronger price signal of the Mibgas. This project will be necessary if an increase demand or export scenario will occur.</i> |
| Benefit Description     | <i>Mugardos terminal is ideally located to take advantage of the US FOB volumes.</i>                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Specific Criteria Fulfilled Comments | ENTSOG PS-CBA demonstrates visible benefits for MidCat. • A better market integration of the Iberian Peninsula will be traduced by a price convergence between Spain and France. • Regarding competition, with the MidCat project France will improve the possibility to take benefit from a cheaper LNG price or Algerian gas. • At European level, the MidCat project can be considered as a way to reduce the dependency from Russian gas and therefore to improve the overall security of supply, as it reinforce the direct link between North Africa and Europe. • This project improves the CO2 emissions in several cases by making the gas cheaper than coal and replacing coal in specific zones. |

| Main Driver Explanation | The "Iberian-French corridor - Eastern Axis - Midcat" was included in the list of Projects of Common Interest (PCI) adopted by the European Commission the 18th of November 2015. This project will clearly improve the integration of the Iberian Peninsula with the rest of Europe reducing its isolation from the European gas markets, and helping to the price convergence of Iberian and European gas markets. Due to the lack of enough interconnection capacity, there is a price differential between Spain and France. This price differential has been steadily maintained since recent years, preventing the Spanish consumers, both domestic and industrial, to access to energy under the same conditions as their European counterparts, causing a loss of competitiveness for the Spanish economy. |
| Benefit Description     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | In 2010, Enagás, TIGF and GRTgaz carried out an OS to ask for binding commitments for capacities provided by MidCat and/or Irún/Bariatou and GRTgaz North-South link. Concerning MidCat, none of the three proposed infrastructure scenarios received enough bids to be triggered. This OS is currently the latest call made to the market regarding MidCat. However, MidCat has demonstrated benefits in terms of market integration (price convergence), security of supply and diversification of supply. Taking into account that the OS2015 was carried out in a context of economic prosperity in comparison with the current situation jointly with the new tendency in contracting capacity (from long term to short term) well as the decrease in gas consumption, it is not foreseen that network users would make enough long-term commitments in order to fully cover the investment. Besides, recent changes in the Spanish regulatory framework would not contribute to have an appropriate rate of return of the investment |
| Market       | In the Open Season launched in 2010 between Spain and France MidCat didn't obtain enough market support .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Market       | Lack of market support                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Main Driver Explanation | The commissioning of the third interconnection point with Portugal will generate congestion in the existing entries in the northwest of the Iberian Peninsula, as well as the terminal El Musel. To ensure the capacity of existing and future entries in the northwest is real and firm, it would be necessary to input the pipeline Guitiriz Zamora as a cluster of the third interconnection with Portugal from its first phase, jointly with other reinforcements required for the correct El Musel integration. The same occurs with the correct integration of the El Musel Terminal, what makes this project "enabler" both for the third interconnection with Portugal and for the El Musel terminal. |
| Benefit Description     | This project is an "enabler" both for the third interconnection with Portugal and for the El Musel terminal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Description                                          | New bidirectional offshore pipeline (Inkoo-Paldiski, DN500, 80 bar) of 80 km, plus 50 km onshore pipeline in EE (Kiili-Paldiski pipeline, DN 700, 55 bar) and 20 km onshore pipeline in FI (Siuntio-Inkoo pipeline, DN500, 80 bar) including metering and compressor stations at both ends with a daily nominal capacity of 7.2 mcm/day. The power of each compressor station is about 10 MW. |                       |          |
| Regulatory Decisions and similar material conditions | The Regulators of Finland (Energiavirasto ) and Estonia (Konkurentsiamet) have made a common CBCA decision for the Balticconnector and Estonia-Latvia interconnection project.                                                                                                                                                                                                                |                       |          |

## Capacity Increments Variant For Modelling

| Point                           | Operator            | Year | From Gas System | To Gas System | Capacity   |
|---------------------------------|---------------------|------|-----------------|---------------|------------|

| Specific Criteria Fulfilled Comments | The purpose of the Balticconnector natural gas pipeline project is to interconnect the Finnish and Estonian natural gas transmission networks and improve the energy security of the Baltic-Finnish region. The integration of the Finnish and Estonian gas infrastructures will ensure a more coherent and diverse natural gas transmission network in the Baltic Sea region, guarantee the security of natural gas supply for the north-eastern Member States of the EU by lifting Finland out of the current energy isolation and enhance EU energy solidarity by providing needed technical implementations for energy independence. The projects also target increased regional cooperation and have a strong focus on consumers and vulnerable energy customers. The aim is to move to Finnish-Baltic single entry-exit zone, which has been identified as the best fit solution in the "Baltic regional gas market study". |

## Benefits

|                         |                                                                                                                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation-Interoperability                                                                                                                                                                                                |
| Main Driver Explanation | Balticconnector will lift Finland out of the current energy isolation and will provide Finland an opportunity to join in the European single gas market and to terminate the derogations on the EU gas market legislation. |
| Benefit Description     | Project has several qualitative and quantitative benefits, such as increase in energy security, price convergence in the region, development of the energy market etc.                                                     |

| Description                                          | This reinforcement of the French Network consists in the looping of the Bourgogne pipeline (between Etrez and Voisines). In addition to the projects Arc de Dierrey in the North and Gascogne Midi in the South, this project is needed to merge GRTgaz's North and South market zones. It will contribute to the priority corridor "North South gas interconnections in Western Europe". |                       |          |

| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled Comments | The project, in addition to Gascogne Midi project, will remove the current bottleneck between North and South of France and thus enable the creation of a single market zone in France, considerably improving market integration in Western Europe and price convergence between northern and southern markets, currently submitted to LNG prices. By removing the bottleneck from North to South of France, dependence of the South of France and Iberian Peninsula to LNG will be reduced. |

Delay Explanation

**Expected Gas Sourcing**

Algeria, Caspian Region, Libya, Norway, Russia, LNG ()

**Benefits**

Main Driver Market Demand

Main Driver Explanation The purpose of the Val de Saône project (along with the Gascogne-Midi project) is to remove the constraints on North to South gas flows in France, thus enabling to increase the potential share of gas imported by pipelines from the North of Europe within the South-Western part of the European market. In terms of market design, the Val de Saône project allows the creation of a single market area in France. This will bring a final solution to higher prices of gas in South of France and Iberian Peninsula.

Benefit Description By facilitating the flow of gas from North-West Europe to Spain, the project will give Iberian Peninsula access to gas priced more extensively according to north west Europe price references. By creating a single French market place, current spread between PEG Nord and PEG South will disappear, and the Iberian peninsula will also benefit from the direct proximity of this large and liquid market place.

**Intergovernmental Agreements**

| Description                                          | This project is a section of the South North Reverse Flow project, from Italy to France, Germany and Belgium via Switzerland. It will contribute to the Corridor "North-South Gas interconnection in Western Europe" and is also related through Italy with the Southern Corridor. Developements are needed at Oltingue and Morelmaison stations to enable this reverse flow from Switzerland/Italy to France. |                       |          |

| Description                                          | This project aims to create a reverse flow between France and Germany at the Obergailbach/Medelsheim IP. It includes pipelines (including compression) and requires changes in the odourisation system (replacing odourisation stations at the entry of the transmission system by odourisation stations at the entry of the regional networks). As an alternative, GRTgaz is carrying out feasibility study of deodorization process meeting threshold defined by adjacent operators. It will contribute to the "North-South Corridor in Western Europe" |                              |                     |

**PCI Details**

|                             |                                                                     |
|-----------------------------|---------------------------------------------------------------------|
| PCI Benefits                | Project concerns investment in reverse flow capacity                |
| General Criteria Fulfilled  | Yes                                                                 |
| Specific Criteria Fulfilled | Competition, Market Integration, Security of Supply, Sustainability |

Specific Criteria Fulfilled Comments Creating a reverse flow would contribute to security of supply by enabling gas flow from France to Germany and connecting LNG terminals in France and Iberia to Germany and Central Eastern Europe markets. It will also respond to the need of more H-Gas sources in Germany in order to replace L-gas which will be strongly declining from 2016. In addition, it would improve market integration between French PEG and German NCG.

**Time Schedule**

Grant Obtention Date  
 Delay Since Last TYNDP 1 year  
 Delay Explanation The project has been postponed from 2021 to 2022, pending on one hand confirmation of market and on the other hand a solution to odorization issues

**Expected Gas Sourcing**

LNG ()

**Benefits**

Main Driver Market Demand  
 Main Driver Explanation Creating a reverse flow from France to Germany to give access to LNG supplies from Atlantic and Mediterranean region  
 Benefit Description Creating a reverse flow would improve integration of German and French markets, and competition as a result. Harmonisation of odourisation practices would enable development of new interconnections in the North Western markets.

**Barriers**

| Barrier Type | Description            |
|--------------|------------------------|
| Market       | Lack of market support |

### Montoir LNG Terminal Expansion

| Specific Criteria Fulfilled          | <i>Competition, Market Integration, Security of Supply, Sustainability</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| Specific Criteria Fulfilled Comments | <p><i>• Market Integration and • Competition: The project will reinforce the existing linking between Northern and Southern European markets thanks to 1) its connections with hubs in the North (France, Germany, Benelux countries, Northern Italy, Switzerland and further east...) and 2) its role in the "LNG flexible floating pipelines" from and to the South (Spain and Portugal, in particular). • Security of Supply: LNG contributes by itself to SoS (cf. LNG sourcing below). Moreover as LNG is at first transported by LNG vessels, it will be always more efficient to get LNG delivered nearest to where gas is needed. • Sustainability: Gas/LNG is an ideal partner for intermittent renewable energy sources (e.g. wind and solar). Moreover the project will contribute to the development of LNG as a clean alternative fuel for trucks and ships.</i></p> |  |

**Expected Gas Sourcing**

*LNG (DZ,CA,CY,LNG,NO,QA,RU,US,WO,YE), LNG diverted from, or reloaded in other European LNG terminals (Spain for example).*

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Main Driver Explanation | Market based investments avoid future stranded assets and thus ensure the best use of money, in particular public money.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Benefit Description     | Forecasts indicate that LNG’s role in Europe will increase in the coming years following the commissioning of new LNG production capacities (in USA and Australia, in particular). If there is a need to develop new infrastructures in Europe to allow the access of larger LNG quantities to where it is needed as well as to improve the LNG contribution to security of supply, the extension of Montoir LNG terminal, thanks to its location and its marginal cost, is an high efficient alternative to a third gas pipeline through the Pyreneans. It should be noted that recently such existing gas pipeline interconnection capacity was mainly used to compensate for LNG re-exports from Spain. Montoir is one of the best entry gates for LNG from all over the world, in particular from USA, toward the core of European mainland gas market. Expansion of Montoir will strongly contribute to market integration, competition, SoS and sustainability in the NSW corridor. |

**Barriers**

| Barrier Type | Description                                                                                                                                 |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Political    | Discrimination aiming at preventing the project to be recognized as an efficient alternative to a third gas pipeline through the Pyreneans. |

Fos Cavaou LNG Terminal Expansion

| PCI Benefits                         | Project aims at supplying directly or indirectly at least two Member States                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| Specific Criteria Fulfilled Comments | <ul style="list-style-type: none"> <li>• Market Integration and • Competition: The project will reinforce the existing linking between Northern and Southern European markets thanks to 1) its connections with hubs in the North (France, Germany, Benelux countries, Northern Italy, Switzerland and further east...) and 2) its role in the "LNG flexible floating pipelines" from and to the South (Spain, Italy, Greece, Malta...).</li> <li>• Security of Supply: LNG contributes by itself to SoS (cf. LNG sourcing below). Moreover as LNG is at first transported by LNG vessels, it will be always more efficient to get LNG delivered nearest to where gas is needed.</li> <li>• Sustainability: Gas/LNG is an ideal partner for intermittent renewable energy sources (e.g. wind and solar). Moreover the project will contribute to the development of LNG as a clean alternative fuel for trucks and ships.</li> </ul> |  |

**Expected Gas Sourcing**

LNG (DZ,CA,CY,LNG,NO,QA,RU,US,WO,YE), LNG diverted from, or reloaded in other European LNG terminals (Spain for example).

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Main Driver Explanation | Market based investments avoid future stranded assets and thus ensure the best use of money, in particular public money                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | Forecasts indicate that LNG’s role in Europe will increase in the coming years following the commissioning of new LNG production capacities (in USA and Australia, in particular). If there is a need to develop new infrastructures in Europe to allow the access of larger LNG quantities to where it is needed as well as to improve the LNG contribution to security of supply, the extension of Fos Cavaou LNG terminal, thanks to its location and its marginal cost, is an high efficient alternative to a third gas pipeline through the Pyreneans. It should be noted that recently such existing gas pipeline interconnection capacity was mainly used to compensate for LNG re-exports from Spain. Fos Cavaou is the best entry gate for LNG from Mediterranean, Middle East and Atlantic toward the core of European mainland gas market. Expansion of the Fos Cavaou will strongly contribute to market integration, competition, SoS and sustainability in the NSW corridor. |

**Barriers**

| Barrier Type | Description                                                                                                                                 |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Political    | Discrimination aiming at preventing the project to be recognized as an efficient alternative to a third gas pipeline through the Pyreneans. |

South Transit East Pyrenees (STEP) - TIGF

| Description                                          | <p>The L-gas area covers around 10% of French gas consumption. It depends on the Netherlands L-gas production as the single supply source on annual basis. Additional flexibility is ensured by Gournay UGS and peak H-to-L conversion facility at Loon-Plage. Due to the decline of L-gas production the conversion of the whole French L-gas area will have to be achieved by the end of 2029. The project covers both the required infrastructure to ensure access to H-gas supply and all required actions for the switch to H-gas. This project is coordinated with Belgian and Dutch operators.</p> |                       |          |
| Regulatory Decisions and similar material conditions | <p>The conversion project in France is covered by: - Article 164 of the Energy Transition Law (18/08/2015) - Decree 2016-348 (23/03/2016)<br/>Transmission, distribution and storage operators are preparing a conversion plan to be submitted to the French ministries by September 2016. Based on this conversion plan, the NRA will carry out an economical and technical analysis.</p>                                                                                                                                                                                                                |                       |          |

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                                        |
| Main Driver Explanation | Decline of L-gas production in the Netherlands with supply contracts ending on 2029 for France and Belgium notwithstanding earlier termination date.                                                                                                                                                                                                          |
| Benefit Description     | Currently the L-gas area across France, Belgium and Germany is similar to a gas island connected to a single source. Through the conversion of the area to H-gas, the project is part of set of new regional infrastructures enabling market participants and consumers to take benefit from competitive and secured supply as the rest of North-West Europe. |

| Description                                          | The Poseidon project consists of a multisource offshore pipeline that will connect the Greek and Italian natural gas transportation systems. The Poseidon project is designed to import 14 Billion cubic meters per year of natural gas from sources available at the Greek borders, such as Caspian, East Mediterranean, Middle East. The total capacity could be upgraded up to 20 Bcm/y with minimal modification of the basic configuration, mainly regarding increased power of the compression station. |                       |          |

|                             |                                                                                                                                                                                                                                             |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity |
| General Criteria Fulfilled  | Yes                                                                                                                                                                                                                                         |
| Specific Criteria Fulfilled | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                         |

Specific Criteria Fulfilled Comments The project creates the connection between the markets of Greece and Italy, enhancing connectivity and market integration, while promoting price convergence. Poseidon strengthens security of supply by promoting diversified sources of gas, potentially from the East Mediterranean, broadens the Southern Gas Corridor and provides reverse flow. Furthermore, by creating more liquidity the project will boost competition leading to more competitive and affordable prices in the markets concerned. The Poseidon pipeline furthers the EU's goal regarding the transition towards a low carbon economy by promoting the use of natural gas and contributing to the displacement of coal while constituting a valuable back up for renewables.

**Time Schedule**

Grant Obtention Date 28/07/2010  
 Delay Since Last TYNDP  
 Delay Explanation

**Expected Gas Sourcing**

Caspian Region, Levantine Basin (Cyprus and Israel), offshore Crete and any other gas volumes that could be available at the GR/TU borders

**Comments about the Third-Party Access Regime**

The exempted capacity is only relative to the forward flow capacity from Greece to Italy.

**Benefits**

Main Driver Market Demand

---

Main Driver Explanation The Poseidon pipeline will provide valuable amounts of diversified sources of gas, leading to greater liquidity of the impacted markets, enhancing the competitiveness of prices. Other than Italy (as well as Greece through reverse flow) Poseidon, functioning in complementarity with the SNAM RETE GAS, Adriatica line will enable the delivery of gas to markets in North East Europe where its benefits will also be felt. While market demand is a key driver, the Poseidon pipeline, by allowing gas from the Southern Corridor to European markets, contributes fundamentally to security of supply.

---

Benefit Description Through the promotion of diversification of sources, routes and counterparts, Poseidon serves to enhance energy security. In conjunction with the EastMed pipeline, it will enable the delivery of a completely new source, via a new route to reach markets, in Italy and beyond. Moreover, due to the reverse flow function, Poseidon will supply gas from Italy to the Greek system and thereby contribute decisively during disruption periods. As regards Italy, Poseidon creates a new entry point with firm capacity, enhancing the effectiveness of the N-I indicator. The new gas will also lead to greater market liquidity creating conditions for healthy gas trading. Via synergies with the Transitgas pipeline, these benefits and excess gas created can contribute to SoS in regions bordering NE and NW of Italy while SE European market conditions will also be positively influenced through the connection, via Greece, with these more developed, hub-based markets.

**Barriers**

| Barrier Type    | Description                                                                                                                                                               |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | The major permits for Poseidon Pipeline have been obtained including the EIA in both Italy and Greece and no significant barriers are foreseen for the remaining permits. |
| Political       | Poseidon Pipeline has been consistently supported by the Greek and Italian Governments.                                                                                   |

Others Poseidon Pipeline was initially conceived to transport gas from the Azeri Shah Deniz 2 field. Following the selection of TAP by the SD2 Consortium, IGI Poseidon is in the process of securing new sources, while maintaining the project's objectives to diversify sources, routes and counterparts.

| Benefit Description     | The project, together with Greece-Italy interconnector offshore project (sponsored by 3rd parties) will establish one more energy corridor between Asian, Middle Eastern and Eastern Mediterranean gas sources and European consumers. The project aims at enhancing the diversification of supply routes at a European level and possibly, depending on the source of gas to be transmitted, the diversification of supply sources thus contributing to the improvement of the Security of Supply level in the region of South Eastern Europe. |

| Description                                          | The Trans Adriatic Pipeline (TAP) will transport natural gas from Kipoi in Greece near the Greek/Turkish border, via Albania and across the Adriatic Sea, to Italy's southern Puglia region in Province of Lecce. In its upstream part, TAP will interconnect with TANAP which is linked further to the east with systems in Turkey, to secure access to the Shah Deniz natural gas field in Azerbaijan and tie into Italy's gas transportation grid operated by Snam Rete Gas in the province of Lecce. TAP's capacity can be expanded up to a total of 20 bcm/a, subject to binding market demand. The Expansion Capacity will be offered to the market via market tests, from no later than start of operations and subsequently every two years. |                       |          |

|----------------------------|------|----|--------|-------------|
| Trans-Adriatic Pipeline AG | 2019 | GR | GR/TAP | 142.0 GWh/d |
|----------------------------|------|----|--------|-------------|

Comment: GCV used for capacity calculations: 11.071 kWh/Sm3.

Incremental capacity available for allocation is subject to a check of the system's capabilities and dependent on the capacity bookings in place.

| Benefit Description     | TAP will contribute to the security and diversity of Europe's energy supply by connecting to existing gas networks and will allow gas to flow directly from the Caspian basin into European markets. TAP will be providing the necessary infrastructure to transport gas from the Shah Deniz field in Azerbaijan by the most direct route to Southern Europe. |

| Description                                          | <p>Please note that this part refers only to LNG section of the Project, i.e. the floating terminal and its Mooring system. The Pipeline section of the Project is addressed in TRA-N-063. The project consists of an LNG offshore Floating Storage Regasification Unit, a Mooring &amp; a Pipeline system (24km Subsea and 4km Onshore), connecting the floating unit to the Greek National Natural Gas System at the area of Amfitriti, 5.5km NE of Alexandroupolis where, DESFA, the NNGS TSO, will build a metering &amp; regulating station. The floating unit, will be stationed in the sea of Thrace, 17.6km SW of Alexandroupolis in NE Greece, at an offshore distance of 5.4 n.m. from the nearest shore. It will have up to 170.000m3 LNG storage capacity and a gas send out capacity of 700.000 Nm3/h corresponding to 6.1bcm/y.</p> |              |          |
| Regulatory Decisions and similar material conditions | <p>No TPA exemption requested NRA only gave opinion on the Independent Natural Gas System License issued by the Ministry of Energy &amp; Environment on 19.08.2011 (opin. number: 29/2011)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |          |

| Delay Since Last TYNDP | 12 months in commissining date / same delay in FID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Delay Explanation      | Delays in permitting phase: competent authorities delayed in issuing the required licenses. In the case of Access to shore, seabed & sea area, there was a delay of 9 months in order to decide how the existing legislation would apply specifically to the Project. In the case of issuance of the Installation Act & Installation license, the main delay was due to the requirement for the introduction of a legislative change necessary to grant the RoW for the onshore pipeline. Other reasons: complex economic & political situation in Greece, in particular, in the 2H2015 (e.g. capital controls). Also, GASTRADE entered into discussions with Public Gas Corporation of Greece (DEPA) for the participation of the later in the Project. (The EC was duly informed on this since 06/2015). However, the finalization of DEPA's participation in the Project was delayed due to political developments in Greece and administrative changes with DEPA. This caused delay in execution of FEED & reaching FID. |

**Expected Gas Sourcing**

LNG (), Multi-sourced supply including new sources (e.g. U.S., Mozambique)

**Comments about the Third-Party Access Regime**

It is not planned to run a formal Market Test as the Project has not applied for a TPA Exemption and Project's commercial viability will be determined by the success of the negotiations with potential gas offtakers and/or interested LNG suppliers who have interest in using the infrastructure.

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Main Driver Explanation | Main drivers: 1. Expressed requirement for diversification of supply sources and routes for SEE markets (Bulgaria, Serbia, FYROM, Romania,Hungary) creates market / demand opportunities for the project 2. Regional demand growth                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Benefit Description     | LNG terminal in northern Greece will: Secure new natural gas quantities for the supply of the Greek and the SE European markets, hence enhancing the security of supply of these markets. Diversify the supply sources and routes in particular with regards to markets with limited supply options (Bulgaria, Serbia, Romania, FYROM, Hungary, Ukraine) and to this extent lift existing isolation with an aim to reduce dependency on Russian gas while provide access for new gas findings in the East Med basin to the markets of SEE. Support the South Corridor project(s) by providing alternative/additional supply quantities when/if required and the interoperability of systems and the creation of a regional gas trading hub. The Project technical design will include provision for LNG-reloading ability for the purpose of supporting LNG bunkering activities or regional distribution of LNG to remote island locations for power generation and other industrial and commercial activities. |

**Barriers**

|                 |                                                                                                                                                                                                                                                                                       |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Barrier Type    | Description                                                                                                                                                                                                                                                                           |
| Regulatory      | If tariff levels for the Project do not enjoy the same regulatory regime as the one applied for other competitive regulated infrastructures in the area, then the Project will become commercially unattractive to potential regional offtakers and therefore financially not viable. |
| Permit Granting | See above. Delays in Permit granting have led to delays in Project implementation.                                                                                                                                                                                                    |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Political | No political barriers. On the contrary, there is clear and declared Political support for the Project from the impacted Member States and in particular from the governments of Greece and Bulgaria. Political stability in the region of the Project's direct influence will support commercial viability of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Others    | Delays in the implementation/start up of new regional interconnection infrastructures (IGB, IBS) and upgrade of existing ones including reverse flow availability. The most critical one is the Interconnector Greece-Bulgaria (IGB). Also, availability of capacity in the greek, bulgarian and romanian Transmission Systems and reverse flow capacity in Trans Balkan will enable flows from the terminal to Ukraine. Finally, reverse flow functionality to the Turkey-Greece Interconnector will open up the Turkish market to the Project. Regarding Financing: The project received grants for studies (from the 1st CEF Energy Call-August 2014) and will apply for grants for works in a future Call from CEF. Award of such Public financing will be critical for the Project's commercial viability. Also access to EIB, EBRD, EFSI, IFC PCI favourable financing tools is very important for the Project. |
| Market    | The markets in SEE are not mature. Currently all gas transactions are done on a bilateral basis and no price transparency exists. Creation of a trading hub in the region with multiple supply options will generate significant opportunities for the marketing of gas imported through the LNG Alexandroupolis floating terminal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Financing | The Project has been awarded with grants for studies (CEF 2014 Call) and will apply for grants for works (in the next Calls) from the CEF. Award of such Public financing will be critical for the Project's commercial viability. Also access to EIB, EBRD, EFSI, IFC PCI favourable financing tools is very important for the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Market    | Lack of market maturity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Description                                          | <p>Please note that this part refers only to the pipeline section of the Project. The LNG section of the Project is addressed in LNG-N-062. The project consists of an LNG offshore Floating Storage Regasification Unit, a Mooring &amp; a Pipeline system (24km Subsea and 4km Onshore), connecting the floating unit to the Greek National Natural Gas System at the area of Amfitriti, 5.5km NE of Alexandroupolis where, DESFA, the NNGS TSO, will build a metering &amp; regulating station. The regasified LNG will be transmitted from the floating unit to the 30" subsea and onshore pipeline through a Pipeline End Manifold. A valve station will be established to the shore-crossing point of the pipeline. The maximum capacity of the pipeline is 6.1 bcm/y.</p> |                              |                |

| Specific Criteria Fulfilled Comments | Market Integration - Regional (SEE + Serbia + FYROM) and beyond (e.g. Hungary and through across the NSI gas corridor) Security of Supply through inter alia source and route diversification- Greece, Bulgaria, Serbia, FYROM, Hungary, Ukraine, Turkey Enhances competition in the region by introducing new sources and routes of supply Sustainability - Supports back up to renewables and power to gas |

**Time Schedule**

|                        |                                                    |
|------------------------|----------------------------------------------------|
| Grant Obtention Date   | 16/04/2015                                         |
| Delay Since Last TYNDP | 12 months in commissining date / same delay in FID |

**Delay Explanation** Delays in permitting phase: competent authorities delayed in issuing the required licenses. In the case of Access to shore, seabed & sea area, there was a delay of 9 months in order to decide how the existing legislation would apply specifically to the Project. In the case of issuance of the Installation Act & Installation license, the main delay was due to the requirement for the introduction of a legislative change necessary to grant the RoW for the onshore pipeline. Other reasons: complex economic & political situation in Greece, in particular, in the 2H2015 (e.g. capital controls). Also, GASTRADE entered into discussions with Public Gas Corporation of Greece (DEPA) for the participation of the later in the Project. (The EC was duly informed on this since 06/2015). However, the finalization of DEPA's participation in the Project was delayed due to political developments in Greece and administrative changes with DEPA. This caused delay in execution of FEED & reaching FID.

**Expected Gas Sourcing**

LNG (LNG), The pipeline will be fed with regasified LNG from the floating unit (LNG-N-062) -hence it means various sources.

**Comments about the Third-Party Access Regime**

It is not planned to run a formal Market Test as the Project has not applied for a TPA Exemption and Project's commercial viability will be determined by the success of the negotiations with potential gas offtakers and/or interested LNG suppliers who have interest in using the infrastructure.

**Benefits**

| <b>Main Driver</b>             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Main Driver Explanation</b> | Main drivers: 1. Expressed requirement for diversification of supply sources and routes for SEE markets (Bulgaria, Serbia, FYROM, Romania, Hungary) creates market / demand opportunities for the project 2. Regional demand growth                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Benefit Description</b>     | LNG terminal in northern Greece will: Secure new natural gas quantities for the supply of the Greek and the SE European markets, hence enhancing the security of supply of these markets. Diversify the supply sources and routes in particular with regards to markets with limited supply options (Bulgaria, Serbia, Romania, FYROM, Hungary, Ukraine) and to this extent lift existing isolation with an aim to reduce dependency on Russian gas while provide access for new gas findings in the East Med basin to the markets of SEE. Support the South Corridor project(s) by providing alternative/additional supply quantities when/if required and the interoperability of systems and the creation of a regional gas trading hub. The Project technical design will include provision for LNG-reloading ability for the purpose of supporting LNG bunkering activities or regional distribution of LNG to remote island locations for power generation and other industrial and commercial activities. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                                                                |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory      | If tariff levels for the Project do not enjoy the same regulatory regime as the one applied for other competitive regulated infrastructures in the area, then the Project will become commercially unattractive to potential regional offtakers and therefore financially not viable.                                      |
| Permit Granting | See above. Delays in Permit granting have led to delays in Project implementation.                                                                                                                                                                                                                                         |
| Political       | No political barriers. On the contrary, there is clear and declared Political support for the Project from the impacted Member States and in particular from the governments of Greece and Bulgaria. Political stability in the region of the Project's direct influence will support commercial viability of the Project. |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Others    | <p>Delays in the implementation/start up of new regional interconnection infrastructure (IGB/IBS) and upgrade of existing ones including reverse flow availability. The most critical one is the Interconnector Grece-Bulgaria (IGB). Also, availability of capacity in the greek, bulgarian and romanian Transmission Systems and reverse flow capacity in Trans Balkan will enable flows from the Terminal (through the assorted pipeline) to Ukraine. Finally, reverse flow functionality to the Turkey-Greece Interconnector will open up the Turkish market to the Project. Regarding financing: The Project received grants for studies (from the 1st CEF Energy Call-August 2014) and will apply for works in a future Call from CEF. Award of such Public financing will be critical for the Project's commercial viability. Also access to EIB, EBRD, EFSI, IFC PCI favourable financing tools is very important for the Project.</p> |
| Market    | <p>The markets in SEE are not mature. Currently all gas transactions are done in a bilateral basis and no price transparency exists. Creation of a trading hub in the region with multiple supply options will generate significant opportunities for the marketing of gas imported through the LNG Alexandroupolis floating terminal (that the pipeline will be connected to).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Financing | <p>The Project has been awarded with grants for studies (CEF 2014 Call) and will apply for grants for works (in the next Calls) from the CEF. Award of such Public financing will be critical for the Project's commercial viability. | Description                                          | The project consists of a Compressor Station on the GR side of the GR/TK border aiming at increasing the capacity of the Greek transmission system in order to make possible the transmission of natural gas to the Greek and European markets with the use of downstream transmission systems. Depending on the variant that will be implemented the configuration will be (1+1) x 4.5 MW or (1+1) x 9.7 MW or (2+1) x 9.7 MW. |                              |                     |
| Regulatory Decisions and similar material conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                 |                              |                     |

#### Capacity Increments Variant For Modelling

| Main Driver Explanation |                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | The Revythoussa LNG Terminal plays a significant role regarding the Security of Supply of gas in Greece and the SE Europe region. The project will enhance this role along with its flexibility for serving more shippers. It will also increase the storage capacity of the terminal. The above benefits will also be felt by BG and RO through the reverse flow arrangements or new North-South interconnections |

| Description                                          | The EastMed project is an approximately 1900 km offshore/onshore pipeline project that will directly connect the East Mediterranean gas resources to the European gas system. The project consists of 5 sections connecting the following areas: Levantine basin – Cyprus –Crete- Peloponnese –West Greece-Thesprotia. The system will have a capacity of 320-350 GWh/d with the option to upgrade the capacity of the pipeline sections from Crete up to 510 Gwh/d, in case relevant reserves will be discovered in the offshore of Crete. |                       |              |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Specific Criteria Fulfilled Comments | Market Integration The project provides significant contribution to Market Integration as it allows to interconnect Cyprus and Crete to European gas network system. Security of Supply The contribution of EastMed project to Security of Supply is particularly relevant as it provides diversification of sources, routes and counterparts, providing solutions to the disruption scenarios. An additional benefit will be provided by enabling the gasification of Cyprus, Crete and Western Greece. Competition The EastMed project will enhance market competition along the whole gas chain, including among producers. The new gas will compete, to the advantage of the consumer, with all existing supplies available in the European markets, enhancing the benefits arising from a better diversified market. Sustainability The Eastmed project will provide competitive gas supply, contributing to displace power production from Coal and Oil, reducing CO2 emissions per energy unit generated. |

**Time Schedule**

Grant Obtention Date 23/10/2015  
 Delay Since Last TYNDP  
 Delay Explanation

**Expected Gas Sourcing**

Levantine Basin and offshore of Crete in case relevant reserves will be discovered.

**Comments about the Third-Party Access Regime**

The access regime will be defined at a later stage of the development activities

**Benefits**

| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver Explanation | <p>The primary objective of the Eastern Mediterranean Pipeline is to provide a permanent connection of the recently discovered gas reserves in the Levantine Basin with the European gas markets. The specific objectives to be achieved with implementation of the project are to:</p> <ul style="list-style-type: none"> <li>• exploit the proximity of the Levantine Basin gas fields to mainland Europe, to diversify the sources, routes and counterparts of the European gas supply with 10-16 bcm/year of deliveries from new sources, which are wholly or partly produced within the EU;</li> <li>• integrate Cyprus with the European gas system, further promoting gas trading in the South Eastern Europe region;</li> <li>• promote the development of a gas trading hubs in Greece and in Italy, in connection with other Southern Corridor initiatives, facilitating gas exchanges in South Eastern Europe;</li> <li>• gasify regions of Greece that currently have no access to gas, such as Crete, Peloponnese and Western Greece.</li> </ul> |
| Benefit Description     | <p>The dependence of the European Union on external gas supplies is continuously increasing, with indigenous production declining, leading to the need to diversify sources so as to strengthen security of the markets' supply, particularly in SEE. On the other hand, unlocking the recent discoveries in the Levantine Basin, including - referring to the sole Cyprus - the largest recent discovery of gas reserves in Europe, is particularly relevant for the development of the exploration and hydrocarbons in the whole East Mediterranean. Considering all the above, EastMed addresses the following main needs:</p> <ul style="list-style-type: none"> <li>• Increases security and diversification of gas supplies to Europe, as well as competition in line with the EU objectives to complete the internal energy market;</li> <li>• Contributes to the development of EU domestic gas resources, thus limiting the dependence on third countries</li> <li>• Secures access to gas sources strategically located for EU</li> </ul>           |

**Barriers**

| Barrier Type | Description                                                                                     |
|--------------|-------------------------------------------------------------------------------------------------|
| Political    | EastMed Pipeline has been consistently supported by the Cypriot, Greek and Italian Governments. |
| Financing    | It is going to be submitted a request to access CEF funds for feasibility studies               |

### South Kavala Underground Gas Storage facility

| Specific Criteria Fulfilled Comments |                                                                                                                                                                                                                   |

#### Time Schedule

|                        |                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------|
| Grant Obtention Date   |                                                                                                                    |
| Delay Since Last TYNDP | <i>2 years</i>                                                                                                     |
| Delay Explanation      | Decision on the procedure to select the project promoter and time needed to prepare the relevant tender procedure. |

#### Expected Gas Sourcing

Caspian Region, Russia, LNG (?), The project may source gas from all gas sources supplying or transitting Greece

Comments about the Third-Party Access Regime

At the present stage of maturity of the project the tariff regime is not known. It is possible that the project capacity might be split into a part under regulated tariff and a part under negotiated access.

Benefits

|                         |                                                                                                                                                                                                                                                                           |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                             |
| Main Driver Explanation |                                                                                                                                                                                                                                                                           |
| Benefit Description     | The project will enhance the national and regional (GR, BG, RO) security of supply and will help Users benefit from market opportunities, especially in the LNG market. Given the proximity of the project location to the TAP route the benefits might also reach Italy. |

Barriers

Main Driver Explanation

Benefit Description

The project will enable TAP to acquire increased flexibility since gas quantities that might be delivered by TAP to intermediate destinations will be compensated by quantities delivered by DESFA to TAP.

Metering and Regulating Station at Alexandroupoli

**Pipelines and Compressor Stations**

| Pipeline Section           | Pipeline Comment   | Diameter (mm) | Length (km) | Compressor Power (MW) |
|----------------------------|--------------------|---------------|-------------|-----------------------|
| Slobodnica - Bosanski Brod | 4 million m3 daily | 700           | 6           |                       |
| <b>Total</b>               |                    |               | <b>6</b>    |                       |

**PCI Details**

|                                      |                                                                                                                                                                                                                                             |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity |
| General Criteria Fulfilled           | No                                                                                                                                                                                                                                          |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                         |
| Specific Criteria Fulfilled Comments | The project is fullfilling and the folloving criteria: Lifting isolation for Bosnia and Herzegovina, reducing bottlenecks, will improve remaining flexibility, will enable source and route diversification                                 |

**Time Schedule**

|                        |                                                              |
|------------------------|--------------------------------------------------------------|
| Grant Obtention Date   |                                                              |
| Delay Since Last TYNDP | The start of the construction has been postponed until 2020. |
| Delay Explanation      | It depends on the agreement with Republika Srpska (B&H)      |

**Expected Gas Sourcing**

LNG (HR), It will be gas from Croatia transport system, Croatian UGS and Croatian planned LNG terminaland Baumgarten via Slovenia

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Main Driver Explanation | This project is of great interest for the development of the natural gas sector in B&H, as its implementation would provide new route of supply B&H with gas, with a possibility of diversification of supply sources and increase in security of supply of the existing transportation system of B&H, and especially in the circumstances of the natural gas supply of the refineries Brod and Modrica and planned power plant (PP) Zenica and CCGT Kakanj, as well as the expansion of the market and increase in the competitiveness of natural gas. The construction of this gas pipeline would enable the B&H gas transmission system to connect with the Croatian gas transmission system through the pipeline from Slavonski Brod to Donji Miholjac, and then with the Hungarian pipeline. It will connect BH market to the new LNG in Croatia and Baumgarten via Slovenia.                                                                                         |
| Benefit Description     | It will be new interconnection, new entry point and transmission route for the needs of BH; it will be SoS and diversification of supply route for Bosnia and Herzegovina. It will enable BH access to Croatian UGS. This project is an interconnection of the gas systems of Croatia and Bosnia and Herzegovina on the route Slobodnica-Brod-Zenica. The most important impacts and benefits of this project: 1. It provides viability and security of supply of Bosnia and Herzegovina; 2. It provides diversification of supply routes and sources for the market of Bosnia and Herzegovina; 3. It provides development of the gas market in Bosnia and Herzegovina; 4. Introducing an environmentally more acceptable energy source (replacement for firewood, coal, fuel oil and complementary generation to renewable energy, and the potential for new CCGT and PP); 5. Reducing CO2 and SO2 emissions in the B&H and region and facilitating economic development. |

## Barriers

| Barrier Type | Description                                                                                                                                              |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Political    | This project is politically very sensitive and depends on the agreement with Republika Srpska and agreements within B&H and its TSOs (BH Gas and GasRES) |

## Intergovernmental Agreements

| Agreement                   | Agreement Description                                           | Is Signed | Agreement Signature Date |
|-----------------------------|-----------------------------------------------------------------|-----------|--------------------------|
| Letter of Intent            | between Plinacro and BH Gas for all projects of interconnection | Yes       | 06/04/2011               |
| Memorandum of understanding | signed between Plinacro and BH Gas                              | Yes       | 26/06/2006               |

Description

The pipeline will cross the territory along the Adriatic coast from Fieri in Albania via Montenegro to Split in Croatia and will be linked to the existing Croatian gas transmission system (main direction Bosiljevo – Split). The Ionian-Adriatic Pipeline is considered a part of the Energy Community Gas Ring, which is the concept of gasification for the entire region. IAP is the most important gas project in the Southeastern Europe supported by the Energy Community. The IAP project is based on the idea of connecting the existing Croatian gas transmission system, via Montenegro and Albania, with the TAP gas pipeline system (Trans Adriatic Pipeline) an exit Bosnia and Herzegovina is planned. Plinacro is the project promoter for submitting the project to TYNDP. In addition, Montenegrin and Albanian counterparts sent their approval.

| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Specific Criteria Fulfilled Comments | Expected Benefits: - gasification of southern part of Croatia; Bosnia and Herzegovina, Montenegro, Albania - Reverse flow capacity - introducing an environmentally acceptable energy source in the region (replacement for firewood, coal, fuel oil and complementary generation to renewable energy, and the potential for increased cogeneration and CHP) - providing diversified gas supply to the region - providing the access to Croatian and Albanian storage capacities - providing significant transit capacity and income to Albania, Montenegro and Croatia. - Reducing CO2 emissions in the region - Security of Supply, Reverse flow, Integration of market areas (market integration benefits for Croatia and region (Albania, Montenegro, Bosnia and Herzegovina and neighbouring countries), diversification of sources, diversification of routes, N-1 criteria completion on national and regional level, support back-up to renewables |

TPA regime is not defined yet

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                   |
| Main Driver Explanation | Gasification of Albania and Montenegro and southern part of Croatia and Bosnia and Herzegovina. Diversification of supply, Security of Supply                                                                                                                                                                                            |
| Benefit Description     | Security of Supply, Reverse flow, Integration of market areas (market integration benefits for Croatia and region (Albania, Montenegro, Bosnia and Herzegovina and neighbouring countries), diversification of sources, diversification of routes, N-1 criteria completion on national and regional level, support back-up to renewables |

## Barriers

| Barrier Type | Description                                             |
|--------------|---------------------------------------------------------|
| Regulatory   | Tarrifs which depends on the Business Model             |
| Political    | The pipeline passes by EU country and Non EU countries. |
| Financing    | Availability of funds and associated conditions         |

## Intergovernmental Agreements

| Agreement                                           | Agreement Description                                                                                                           | Is Signed | Agreement Signature Date |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------|
| Agreement to extend the Memorandum of Understanding | Signed between Plinacro and TAP                                                                                                 | Yes       | 25/02/2014               |
| Memorandum of Understanding                         | Signed between Plinacro and TAP                                                                                                 | Yes       | 05/02/2011               |
| Ministerial declaration                             | signed by the Ministries of enegy of Albania, Montenegro and Croatia, from dezember 2008, Bosnia and Herzegovina signed as well | Yes       | 27/09/2007               |

Interconnection Croatia/Serbia (Slobdnica-Sotin-Bačko Novo Selo)

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                              |                |

| Update Date                                          | 13/07/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                              | Non-Advanced   |
| Description                                          | Covering Croatia and Serbia, connecting the Croatian gas transmission system to the Serbian gas transmission system Slobodnica - Sotin (Croatia) - Bačko Novo Selo (Serbia). It will be new interconnection, new entry point and transmission route for the needs of Serbia; it will be SoS and diversification of supply route for Serbia. It will enable Serbia access to Croatian UGS and enable supply of gas from Austria, Slovenia and Italy by the Croatian gas transmission system. |                              |                |
| Regulatory Decisions and similar material conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                              |                |

Capacity Increments Variant For Modelling

| Point                                          | Operator     | Year | From Gas System | To Gas System | Capacity    |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled Comments | This project is an interconnection of the gas systems of Croatia and Serbia on the route Slobodnica-Sotin-Bačko Novo Selo and it is primarily intended for transport of LNG from the terminal on the island of Krk as well as from other possible routes and directions towards SEE countries. The most important impacts and benefits of the project: 1) It provides viable and secure supply of SEE countries, which are heavily dependent on the Russian gas and jeopardized by the Russian giving up on the South Stream project and the announcement regarding termination of gas transmission via Ukraine after 2019 2) It provides diversification of supply (also in case the previously mentioned threats fail to occur) and thereby competitiveness and lower prices for users 3) It facilitates market integration |

**Expected Gas Sourcing**

Caspian Region, LNG (HR), it will be gas from Croatian transport system, Croatian UGS

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled Comments | Project will connect several, in the future exceptionally important, points of the Croatian gas transmission system. It is the future strategic gas transmission connector of great significance and is an integral part of the North – South European Corridor named as the North-South (Baltic – Adriatic) Gas Connection. Its purpose is linking the Polish and the Croatian LNG (Liquefied Natural Gas) solutions. This gas pipeline (as well as all the pipelines to which it connects and the associated gas nodes) will provide gas transmission in all directions, i.e. it will satisfy all transmission requirements and will maximise the value of the IAP and LNG projects in Croatia and the region. In addition, it will increase the use of the existing system and the new interconnection with Hungary. |

**Time Schedule**

Delay Since Last TYNDP

Delay Explanation

The preparatory work will be performed in phases, depending on the development of the LNG project,

**Expected Gas Sourcing**

Caspian Region, LNG (HR,QA), it will be gas from Croatia transport system, Croatian UGS and all import routes (LNG and IAP)

**Comments about the Third-Party Access Regime**

TPA regime is not defined yet, Exemption Regime possibly

**Benefits**

Main Driver

Market Demand

Main Driver Explanation

This gas pipeline passes only through the territory of the Republic of Croatia. However, it has regional significance since it is the main evacuation gas pipeline from the LNG solution on the island of Krk towards Hungary and it is its main role. This gas pipeline increases utilisation of the interconnection with Hungary so it has influence on Hungary but also further on Slovakia and Ukraine. The gas pipeline shall be also significant for third countries; Serbia, Bosnia and Herzegovina by constructing interconnection with these countries.

Benefit Description

The project is the main gas pipeline for transport of LNG from the terminal on the island of Krk as well as from other possible sources, such as gas from the Ionian-Adriatic Pipeline , towards CEE and SEE countries. At the same time, in addition to already constructed interconnection gas pipeline with Hungary, Slobodnica-Donji Miholjac-Dravaszerdahely, it presents the Croatian part of the strategic transregional gas pipeline connection Adriatic-Baltic the aim of which is to connect the Polish and Croatian LNG terminal. The most important impacts and benefits of this project: 1. It provides viable and secure supply of CEE and SEE countries, which are heavily dependent on the Russian gas and jeopardized by the Russian giving up on the South Stream project and the announcement regarding termination of gas transmission via Ukraine after 2019. 2. It provides diversification of supply (also in case the previously mentioned threats fail to occur) and thereby competitiveness and lower pr

| Description                                          | <p>The import terminal for the liquefied natural gas (LNG) will be situated in Omišalj on the Island of Krk, Republic of Croatia. The project is planned as a stage development: with: 1st stage - FSRU with annual send-out capacity of 1- 4 bcm/y (according to FSRU ship and pipeline availability), 2nd stage - LNG onshore terminal with annual send-out capacity of 3.5 bcm/y, 3rd stage - LNG onshore terminal with annual send-out capacity of 5 bcm/y and 4th stage - LNG onshore terminal with annual send-out capacity of 8.75 bcm/y. Construction and the size of the onshore terminal will depend on the market need. Future LNG Terminal will be an important part for the security of supply for Central and South-Eastern European countries. Gas supply in the region is heavily dependent on one supply source and therefore LNG terminal in Croatia would represent a major diversification gas supply route in the region.</p> |              |          |
| Regulatory Decisions and similar material conditions | <p>Croatian Energy Regulatory Agency has given to LNG Croatia LLC on 03.02.2016, a permit for performing energy activities which enables LNG Croatia LLC to operate the terminal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |              |          |

Capacity Increments Variant For Modelling

| Variant : 1. - FSRU                                                                                             |                     |      |                 |               |             |
|-----------------------------------------------------------------------------------------------------------------|---------------------|------|-----------------|---------------|-------------|
| 1st phase - FSRU with annual send-out capacity of 1- 4 bcm/y (according to FSRU ship and pipeline availability) |                     |      |                 |               |             |
| Point                                                                                                           | Operator            | Year | From Gas System | To Gas System | Capacity    |
| Croatia LNG                                                                                                     | LNG Hrvatska d.o.o. | 2018 | LNG_Tk_HR       | HR            | 107.0 GWh/d |
| <i>Comment: Short-term rented FSRU (min 3, max 5 years)</i>                                                     |                     |      |                 |               |             |

| Grant Obtention Date   | 20/11/2015                                                                                                                                                                                                                                                    |
| Delay Since Last TYNDP | None                                                                                                                                                                                                                                                          |
| Delay Explanation      | In comparison with last TYNDP, there is no delay because the FSRU solution represents a fast track solution enabling the gas to flow from the Island of Krk from Q1/2018. This represents a one year acceleration of the project comparing to the last TYNDP. |

#### Expected Gas Sourcing

Gas sourcing will be decided by LNG terminal capacity users, who will have the freedom to arrange gas supplies and gas origin

#### Comments about the Third-Party Access Regime

TPA regime will be defined after market survey procedure (in our case Open Season)

#### Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Main Driver Explanation | Importance of LNG terminal in Croatia is in possibility of providing natural gas to multiple countries in the region. Countries included: Hungary, Slovenia, Austria, Italy, Germany, Czech Republic, Slovak Republic, former Yugoslav Republic of Macedonia, Albania, Kosovo, Serbia, Montenegro, Bosnia and Herzegovina, Ukraine, Romania, and Bulgaria. Gas supply in the region is heavily dependent on one supply source and therefore LNG terminal in Croatia represents a major diversification gas supply route in the region. |
| Benefit Description     | Project benefits include: providing diversity of supply of natural gas, providing security of supply of natural gas, introducing the ecologically sound energy source in the region, reducing CO <sub>2</sub> emissions in the region, facilitating economic development, etc.                                                                                                                                                                                                                                                         |

#### Barriers

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | National Regulatory Agency needs to approve missing regulatory framework for liquefied natural gas i.e. methodology for determination of tariff for receiving LNG and gas send-out. In order for the project to be implemented on time, when the CBA/CBCA request is submitted to the Croatian NRA all of the relevant NRA's (six identified countries) need to come to a fast decision. |

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Permit granting process for the project has started in 10/2013 by requesting the EIA which was approved in 04/2014. Location permit was approved in 09/2015. Accordingly to the specific phase of the projects permits will be modified/ obtained.                                                                                                                                                                                                   |
| Political       | Project named LNG terminal on the Island of Krk was declared on Government of Republic of Croatia session from 16th of July 2015 a project of strategic importance for the Republic of Croatia. The Act on strategic investments enables this kind of projects to have the highest priority with faster and simplified procedure in obtaining necessary documents and permits for the project implementation.                                        |
| Others          | Potential barrier of enough pipeline capacity availability. The pipelines need to be build but FID has not yet been reached, which is a precondition for LNG terminal realization in forseen deadlines.                                                                                                                                                                                                                                              |
| Market          | Market Background Analysis was carried out and it indicated that the market has commercial potential. Open Season procedure will serve as an official confirmation of that analysis. The binding phase of Open Season has been carried out. Signing of the contract is expected to be upon NRA's approval of missing regulatory framework for liquefied natural gas i.e. methodology for determination of tariff for receiving LNG and gas send-out. |

| Description                                          | New pipeline which will upgrade the existing interconnection Croatia/Slovenia. Along with the existing interconnection Karlovac-Lučko-Zabok-Rogatec, a new gas pipeline system has been planned which would significantly increase the capacity of the interconnection of the Croatian and the Slovenian gas transmission systems in this direction. Considering almost all existing and new supply directions in the surrounding region and the Croatian storage potentials this opens significant transit potentials in both directions. Along this transit route, it is planned to upgrade the capacity to 5 bcm/y. |                       |          |
| Regulatory Decisions and similar material conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                       |          |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Specific Criteria Fulfilled Comments | The project increases the integration of the Croatian gas market with the European gas market, the current interconnection capacity is limited to 1.5 bcm/y. The pipeline will have the reverse flow, so gas can flow from LNG Krk or IAP to Slovenia and further to Central Europe expected to result in reduced end-user energy prices providing the security of supply increasing the capacity along the route providing enhanced access to Baumgarten and the Italian gas market providing an additional import of gas achievement of benefits of the open gas market This project is expected to contribute to the provision of gas supply to potential customers in the Central Europe countries |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Main Driver Explanation | The current capacity is limited;the section from Lučko to Rogatec up to 1.5 bcm/y.Increasing capacity by 5 bcm opens the possibility for importing more gas from the Baumgarten. In addition, the source of the gas, in the near future) is going to be the gas from the LNG solution on the island of Krk as well as from the Ionian – Adriatic Pipeline toward Slovenia and the neighbouring countries. In this case the current pipeline capacity would not be sufficient; therefore it is envisaged to be increased. By doubling the pipeline, it is possible to use both the existing and future Croatian UGSs. The construction of this interconnection is vital for the security of supply of both the Croatian market and other markets in the SE region.                                                                                                                                                                            |
| Benefit Description     | It will be significantly increase the capacity of the interconnection of the Croatian and Slovenian gas transmission systems in both directions. It will increase the capacity along the route, provide enhanced access to Baumgarten and Italien gas market. The most important impacts and benefits of this project: 1. It provides security of supply for Croatia (N-1 criterion has not been met!) and a reverse flow (from Croatia to Slovenia) 2. It provides access to the gas markets of Austria and Italy via the Slovenian system 3. It provides import and significant transit of gas from the direction of Italy and Austria to CEE and SEE countries (Hungary, Bosnia and Herzegovina, Serbia...) 4. It provides significant transit of gas from LNG terminal, Ionian-Adriatic Pipeline or other sources towards Slovenia, Austria and Italy as well as the countries in their surrounding 5. It facilitates market integration |

| Description                                          | <p>The pipeline is the connection of the LNG on the Krk island with the Croatian gas transmission system. Gas pipeline Omišalj-Zlobin jointly with gas pipeline system Zlobin - Bosiljevo - Sisak-Kozarac and with gas pipeline Kozarac-Slobodnica makes LNG Main Evacuation Pipeline connecting LNG from the LNG solution on the island of Krk with Central Eastern European countries. The pipeline is a continuation of the existing Hungary – Croatia interconnection (gas pipeline Varosföld-Dravaszerdahely-Donji Miholjac-Slobodnica) will be connected to the future Ionian Adriatic Pipeline (IAP) will be connected to the future LNG solution in Omišalj It will be the "backbone" of the Croatian gas system.</p> |                       |          |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity, Project aims at supplying directly or indirectly at least two Member States                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled Comments | Project will connect several, in the future exceptionally important, points of the Croatian gas transmission system. It is the future strategic gas transmission connector of great significance and is an integral part of the North – South European Corridor named as the North-South (Baltic – Adriatic) Gas Connection. Its purpose is linking the Polish and the Croatian LNG (Liquefied Natural Gas) solutions. This gas pipeline (as well as all the pipelines to which it connects and the associated gas nodes) will provide gas transmission in all directions, i.e. it will satisfy all transmission requirements and will maximise the value of the IAP and LNG projects in Croatia and the region. In addition, it will increase the use of the existing system and the new interconnection with Hungary. |

Time Schedule

Grant Obtention Date  
 Delay Since Last TYNDP

Delay Explanation This project completely depends on LNG terminal project on island of Krk

**Expected Gas Sourcing**

LNG (?), it will be gas from Croatia transport system, Croatian UGS and all import routes (LNG and IAP)

**Benefits**

Main Driver Market Demand

Main Driver Explanation This gas pipeline passes only through the territory of the Republic of Croatia. However, it has regional significance since it is the main evacuation gas pipeline from the LNG solution on the island of Krk towards Hungary and it is its main role. This gas pipeline increases utilisation of the interconnection with Hungary so it has influence on Hungary but also further on Slovakia and Ukraine. The gas pipeline shall be also significant for third countries; Serbia, Bosnia and Herzegovina by constructing interconnection with these countries.

Benefit Description The project is the main gas pipeline for transport of LNG from the terminal on the island of Krk as well as from other possible sources, such as gas from the Ionian-Adriatic Pipeline , towards CEE and SEE countries. At the same time, in addition to already constructed interconnection gas pipeline with Hungary, Slobodnica-Donji Miholjac-Dravaszerdahely, it presents the Croatian part of the strategic transregional gas pipeline connection Adriatic-Baltic the aim of which is to connect the Polish and Croatian LNG terminal. The most important impacts and benefits of this project: 1. It provides viable and secure supply of CEE and SEE countries, which are heavily dependent on the Russian gas and jeopardized by the Russian giving up on the South Stream project and the announcement regarding termination of gas transmission via Ukraine after 2019. 2. It provides diversification of supply (also in case the previously mentioned threats fail to occur) and thereby competitiveness and lower price

**Barriers**

Barrier Type Description

Others The project completely depends on the realisation of the Krk LNG project

Interconnection Croatia-Bosnia and Herzegovina (South)

| Main Driver Explanation | For the western part of Bosnia and Herzegovina                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | The aim of the project is to assess the feasibility of providing gas supply to the Una-Sana Canton in BiH from the Croatian gas transmission system. It will be from the Lička Jesenica gas transmission node in Croatia via Lika to the HR/BiH border and from there to Bosanska Krupa with branches to Bihać and velika Kladuša in Una-Sana Canton. The extension of the gas transmission in Croatia to the border with BiH will allow additional gasification in the part of Croatia along the pipeline route. |

| Description                                          | <p>Construction of such facilities is necessary due to the opening of the gas market, as well as providing sufficient transmission capacities and natural gas delivery pressure conditions and for development of the gas market in Croatia and the neighbouring countries. Compressor stations will significantly increase efficiency of the Croatian gas transmission system. Compressor stations are integral part of the transmission system, integrated in the system, primarily in a manner to increase the flexibility of managing the existing transmission capacities of the system, and to provide rational increase of transmission capacities according to user needs, that is, the requirements of the market and to satisfy market conditions arising from the application of new legal regulation.</p> |                       |          |

| Main Driver Explanation | Project will enable the reverse flow in all interconnection points.                                                                                                                                                                                                                                                                                                          |
| Benefit Description     | Construction of such facilities is necessary due to the opening of the gas market, as well as providing sufficient transmission capacities and natural gas delivery pressure conditions and for development of the gas market in Croatia and the neighbouring countries. Compressor stations will significantly increase efficiency of the Croatian gas transmission system. |

Interconnection Croatia/Slovenia (Umag-Koper)

| Description                                          | This pipeline is a regional link to Croatian and Slovenian system. Relevant gas pipeline is significant for the regional security of supply, especially in the light of the fact that these parts of Croatian and Slovenian markets are allocated at the ends of the associated gas transportation systems. It is also important for the competitiveness and market competition. |                       |              |

| Description                                          | Construction of such facilities is necessary due to the opening of the gas market, as well as providing sufficient transmission capacities and natural gas delivery pressure conditions and for development of the gas market in Croatia and the neighbouring countries. Compressor stations will significantly increase efficiency of the Croatian gas transmission system. Compressor stations are integral part of the transmission system, integrated in the system, primarily in a manner to increase the flexibility of managing the existing transmission capacities of the system, and to provide rational increase of transmission capacities according to user needs, that is, the requirements of the market and to satisfy market conditions arising from the application of new legal regulation. |                              |                |

**PCI Details**

PCI Benefits Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity

General Criteria Fulfilled Yes

Specific Criteria Fulfilled Competition, Market Integration, Security of Supply, Sustainability

Specific Criteria Fulfilled Comments

**Time Schedule**

Grant Obtention Date 25/04/2016

Delay Since Last TYNDP

Delay Explanation

**Benefits**

Main Driver Market Demand

Main Driver Explanation Projects will enable the reverse flow in all interconnection point

Benefit Description

Construction of such facilities is necessary due to the opening of the gas market, as well as providing sufficient transmission capacities and natural gas delivery pressure conditions and for development of the gas market in Croatia and the neighbouring countries. Compressor stations will significantly increase efficiency of the Croatian gas transmission system.

| Description                                          | Gas pipeline Kozarac - Slobodnica jointly with gas pipeline sytem Zlobin - Bosiljevo - Sisak-Kozarac and with gas pipeline Omišalj-Zlobin makes LNG Main Evacuation Pipeline connecting LNG from the LNG solution on the island of Krk with Central Eastern European counties. The pipeline system is a continuation of the existing Hungary – Croatia interconnection (gas pipeline Varosföld-Dravaszerdahely-Donji Miholjac-Slobodnica) will be connected to the future Ionian Adriatic Pipeline (IAP) will be connected to the future LNG solution in Omišalj It will be the "backbone" of the Croatian gas system. |                              |                     |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled Comments | Project will connect several, in the future exceptionally important, points of the Croatian gas transmission system. It is the future strategic gas transmission connector of great significance and is an integral part of the North – South European Corridor named as the North-South (Baltic – Adriatic) Gas Connection. Its purpose is linking the Polish and the Croatian LNG (Liquefied Natural Gas) solutions. This gas pipeline (as well as all the pipelines to which it connects and the associated gas nodes) will provide gas transmission in all directions, i.e. it will satisfy all transmission requirements and will maximise the value of the IAP and LNG projects in Croatia and the region. In addition, it will increase the use of the existing system and the new interconnection with Hungary. |

### Time Schedule

|                        |                               |
|------------------------|-------------------------------|
| Grant Obtention Date   | 24/11/2015                    |
| Delay Since Last TYNDP |                               |
| Delay Explanation      | Project depend on LNG project |

Expected Gas Sourcing

LNG (), it will be gas from Croatia transport system, Croatian UGS and all import routes (LNG and IAP)

Benefits

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Main Driver Explanation | This gas pipeline passes only through the territory of the Republic of Croatia. However, it has regional significance since it is the main evacuation gas pipeline from the LNG solution on the island of Krk towards Hungary and it is its main role. This gas pipeline increases utilisation of the interconnection with Hungary so it has influence on Hungary but also further on Slovakia and Ukraine. The gas pipeline shall be also significant for third countries; Serbia, Bosnia and Herzegovina by constructing interconnection with these countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Benefit Description     | The project is the main gas pipeline for transport of LNG from the terminal on the island of Krk as well as from other possible sources, such as gas from the Ionian-Adriatic Pipeline , towards CEE and SEE countries. At the same time, in addition to already constructed interconnection gas pipeline with Hungary, Slobodnica-Donji Miholjac-Dravaszerdahely, it presents the Croatian part of the strategic transregional gas pipeline connection Adriatic-Baltic the aim of which is to connect the Polish and Croatian LNG terminal. The most important impacts and benefits of this project: 1. It provides viable and secure supply of CEE and SEE countries, which are heavily dependent on the Russian gas and jeopardized by the Russian giving up on the South Stream project and the announcement regarding termination of gas transmission via Ukraine after 2019 2. It provides diversification of supply (also in case the previously mentioned threats fail to occur) and thereby competitiveness and lower price |

Benefit Description

o The Hungarian projects taken as a whole main aim, is to enhance the flexibility of the Hungarian transmission system by connecting to neighbouring systems, ensuring reserves flow availability, and guaranteeing flow deliverability which will enhance the transmission systems security of supply position along with helping with further market integration.

| Description                                          | The main aim of the Tesla project is to transport natural gas from the planned Turkish Stream (RU-TR) to Central and Eastern Europe via Greece, Macedonia, Serbia, Hungary and Austria. The Hungarian section is part of the TR-GR-FYROM-SRB-HU-AT corridor. The main flow direction is from Turkey to Austria, but according to EU rules we intend to ensure the reverse flow (from Austria to Turkey) with the same capacity as the main flow direction. |                       |              |

| <b>Description</b>                                          | Eastring-HU is subproject located in Hungary and is essential part of the Eastring project, which connects IP Veľké Kapušany at the SK-UA border, with IP at the BG/TR border in the following routing options: – from SK to RO – via HU, (new pipeline). – from RO to TR – Option A – new pipeline passing production & storage area and continuing to IP Isaccea and then to BG/TR border by utilizing existing RO-BG transit assets – Option B – new pipeline, passing 2 production & storage areas and continuing to BG/TR border. The project would (i) secure supplies in case of RU disruption and therefore it will increase gas SoS in the broader Central-South-East EU region, (ii) allow access to alternative gas sources for Central, Western & Southern Europe and (iii) mean step towards EU single gas market. |                              |                     |

| Main Driver Explanation | The project brings significant benefits to the SoS of Europe bringing the increasing new sources of gas supply in South Eastern Europe to the markets of Central and Western Europe, while further enhancing the market integration of the affected countries.                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | - Physical alternative for providing 100% of all Balkan countries' consumption; - Providing security of supply for 100% of all Balkan countries' consumption; - Additional utilization for CZ, SK, PL, UA, RO, BG transit and storage assets; - Providing Western shippers with possibility to supply Balkan countries and even Turkey from NCG/Gaspool/Baumgarten; - Corridor ready for future gas imports to Europe from alternative sources – AGRI, TANAP, Caspian, Iran, Iraq, Egypt, Israel, Cyprus. Most of them from perspective Turkish natural gas hub/border Turkey/BG; |

| Description                                          | The aim of the project is to build a new bidirectional high pressure transit pipeline between Vecsés and Városföld to extend the Slovak-Hungarian Interconnector into south direction. The project contributes to develop the North-South gas corridor and to increase the European energy security and to diversificate the gas supply sources and transmission routes. |                       |              |

| Description                                          | <p>Shannon LNG proposes to construct a liquefied natural gas (LNG) terminal on the southern shore of the Shannon Estuary in County Kerry, Ireland. Shannon LNG has obtained all of the major permits and consents for the LNG project including planning permission for the terminal and 26 KM export pipeline, pipeline rights of way and foreshore leases and licenses. Shannon LNG has planning permission to build a 500 MW CHP plant and associated 220 kV transmission infrastructure to connect the CHP plant to the national grid. The Shannon LNG terminal is designed and permitted to export to the national gas grid up to 26.8 million normal cubic metres per day of natural gas. It is currently envisaged the project will have initial deliverability of 16.1 normal million cubic metres per day.</p> |              |              |

| Specific Criteria Fulfilled Comments | Ireland currently fails the EU's Infrastructure Standard N-1 test under Regulation EU 994 of 2010 and has to rely on a regional approach with Great Britain (GB) to pass this important test. The Shannon LNG project, at full capacity, would allow Ireland to pass the N-1 test and provide the added benefit of increasing the resilience of the GB system. This will also have the effect of increasing the resilience of the Great Britain gas supply system as approximately 5 billion cubic metres per annum of demand could be removed from the GB System. The UK's DECC published a National Preventive Action Plan in November 2012 in line with the requirements of Regulation (EU) 994/2010. The DECC report stated (page 19) the following with respect to the impact of the Shannon LNG project on Northern Ireland (part of the UK) "Additionally the CAG project also aims to develop a regional gas market within the context of the wider EU Internal Market in gas where Northern Ireland gas consumers could access |

| Main Driver Explanation | <p>Ireland currently fails the EU's Infrastructure Standard N-1 test under Regulation EU 994 of 2010 and has to rely on a regional approach with Great Britain (GB) to pass this important test. The Shannon LNG project, at full capacity, would allow Ireland to pass the N-1 test and provide the added benefit of increasing the resilience of the GB system. This will also have the effect of increasing the resilience of the Great Britain gas supply system as approximately 5 billion cubic metres per annum of demand could be removed from the GB system. The Shannon LNG terminal would establish a new supply point for natural gas on the western edge of Europe, thereby facilitating greater West to East flows of natural gas and reducing Europe's reliance on East to West flows.</p>                                                                                                                                                                                                                                     |
| Benefit Description     | <p>The Shannon LNG project will increase Ireland's security of gas supply. Ireland imports over 90% of its gas via two pipelines from Scotland. Ireland is unable to meet its N-1 Infrastructure requirements under Regulation (EU) No 994/2010 demonstrated in the Commission for Energy Regulation's Consultation Paper "Draft National Preventive Action Plan – Gas 2012-2014 Ireland" (CER/12/088). If the permitted ultimate capacity from the Shannon LNG terminal is added to the CER's calculation, the result demonstrates that the Shannon LNG terminal has the potential to satisfy the N-1 infrastructure requirement. The initial phase of the Shannon LNG project (16.1 mcm/d) will be capable of supplying approximately 60% of forecast Irish peak demand (26.6 mcm/d) for 2020/2021 (Calculated using 1 in 50 Winter Peak Day Demand Scenario forecast, CER 2012 Joint Gas Capacity Statement). The proposed LNG terminal will increase market integration and system flexibility by providing a new gas supply route to</p> |

| Benefit Description     | 1. Physical reverse flow between Ireland and Northern Ireland is beneficial to the development of an integrated market on the island of Ireland, having significant importance in the development and operation of a single gas market between both jurisdictions. 2. It would widen the market that is available to Northern Ireland gas market participants. 3. Contributes to the viability of LNG and storage projects. |

Development for new import from the South (Adriatica Line)

| Description                                          | <p>Gas pipeline project aiming to create a new link between Algeria and Italy via Sardinia. It will be the first direct route between Algeria and Italy transporting 8 billions mc of gas. From El Kala (Koudiet Draouche) in Algeria an offshore section will cross the Mediterranean Sea going down to 2.800 m of depth getting to Porto Botte in Sardinia (which will be the entry point in the Italian RNG - Rete Nazionale Gasdotti or Gas National Network). From Porto Botte an onshore section will cross Sardinia towards Olbia in the north of the island (with 39 offtake point along the route to finally bring the long awaited gas to Sardinian users and thus remove the isolation of Sardinia from RNG). From Olbia then another offshore section of the pipeline will cross the Tyrrhenian Sea at around 800 m of depth to get to Piombino in Tuscany where the pipeline will be connected with the existing Rete Nazionale Gasdotti of Snam Rete Gas.</p> |                       |          |
| Regulatory Decisions and similar material conditions | <p>The Project has already received from the competent Italian Ministry (Ministero dello Sviluppo Economico) a Priority Allocation (Allocazione Prioritaria) for 100% of its capacity for a period of 25 years.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                       |          |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity, Project aims at supplying directly or indirectly at least two Member States                                                                                          |  |  |  |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| Specific Criteria Fulfilled Comments | The project will contribute to the creation of an Italian Gas Hub, by opening a more efficient route to reach the barycentre of Italian gas demand and further on the Central EU market. It will give a significant contribution to security of supply and competition for Italy and Europe. It represents a unique opportunity of a clean and sustainable energy source for Sardinia (and possibly for Corsica). |  |  |  |

**Time Schedule**

|                        |                                                                               |

| Delay Since Last TYNDP | 12 months                                                                     |
| Delay Explanation      | Delay mainly due to delays in the authorisation process in Italy and Algeria. |

**Expected Gas Sourcing**

Algeria, In the longer term, with the realisation of ambitious projects aiming to interconnect new African gas reserves to European ma

**Comments about the Third-Party Access Regime**

On 29th October 2010, the project has received from the competent Italian Authority (Ministry of the Economic Development) by decree a Priority Allocation right (Allocazione Prioritaria) of the entry capacity at the Porto Botte Entry Point, for 100% of the capacity and for a period of 25 years.

**Benefits**

|                         |                                                                                                                    |
|-------------------------|--------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                      |
| Main Driver Explanation | The project has been developed from its start on the basis of the prospected timing of European gas demand growth. |

Benefit Description - The Galsi project will improve security of supply in Italy and Europe, providing for a new and more efficient route for Algerian gas to reach the centre of Italian gas consumption (located in northern Italy) and further on the northern European markets. In the longer term, with the development of new projects interconnecting different gas sources in Africa (e.g. new Algerian shale gas or TSGP project for Nigerian gas), the Galsi pipeline could provide a highly strategic diversification of gas supply routes to European markets and their supply flexibility. - The Galsi project will contribute to the creation of an Italian gas hub for gas supply to Europe which, through the increase of gas liquidity, will enable the export of major gas volumes from Italy to other European markets through the development of reverse flow capacities. - Reduction of GHG emissions; the Galsi project complies with sustainable development guidelines, i.e. the promotion of the substitution of high pollutant fo

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                                                                               |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory      | The Italian Section of the project will be ruled under the Italian regulatory framework. The International Section (from Algeria to Italian territorial waters in Sardinia) will be build and operated by Galsi as an independent operator with a tariff agreed between the Company and shippers.                                         |
| Permit Granting | Permitting process (involved inter alia 2 regions, 9 provinces and 40 townships) substantially completed: environmental permi                                                                                                                                                                                                             |
| Market          | The persistent uncertainties in the market scenarios make more complex the finalisation by the Shareholders of the commercial framework of the project, i.e. the definition of suitable terms and conditions for the gas supply and gas transportation agreements, which represents an essential piece for the final investment decision. |
| Financing       | EEPR funds for 120 millions euros were granted by the European Commission with decision on 13th August 2010. This grant was then cancelled with decision on 26th September 2014. Future availability of new European Commission funds would be a key issue for the success of the project.                                                |

**Intergovernmental Agreements**

| Agreement                                                      | Agreement Description                                                                                                                            | Is Signed | Agreement Signature Date |

| Description                                          | <p>The planned Porto Empedocle LNG Terminal will be located in Italy, in the Sicily Region, cadastral area of Porto Empedocle, for which the promoter received a thirty-year concession. It will consist of two underground storage tanks of 160.000 of m<sup>3</sup> of capacity each, vaporiser pumps and other treatment facilities required to process LNG and a breakwater with mooring jetty and unloading arms. The LNG Terminal at Porto Empedocle will offer a nominal yearly regasification capacity of 8 billion m3; will be able to receive LNG tankers up to 155.000 m3 of capacity. The LNG Terminal will be able to inject the gas at the standard grid pressure (around 70 bar) and will be connected to the transmission system operated by SnamReteGas by means of a pipeline section specifically built by SnamReteGas.</p> |              |          |

| PCI Benefits                         | Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Specific Criteria Fulfilled Comments | market integration: it provides a good contribution to the EU gas market integration, being the Italian system well interconnected with the rest of EU gas market, through TAG and Transitgas, with positive impact on prices, gas flows, diversification, flexibility and price convergence.<br>security of supply: it provides a strong improvement of the SoS of the system, not only in Italy but also in other Member States; LNG is more diversified and flexible than gas via pipeline and it gives access to a plurality of markets and players. sustainability: it provides additional gas-fired operational flexibility required by the growing intermittent renewables generation; building a terminal in South Italy (Sicily) would help to create local and sustainable jobs in the area. competition: it provides additional competitive pressure to traditional import sources (Algeria, Norway, Lybia, Russia) which are becoming more important because of the indigenous production depletion |

## Time Schedule

|                        |                                                                                                                                                                                                                                                                                                                |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Delay Since Last TYNDP | about 2 years                                                                                                                                                                                                                                                                                                  |
| Delay Explanation      | Nuove Energie is awaiting the ministerial decree that have to follow the National Energy Strategy (SEN) which will identify the "Strategic Infrastructure" for the gas italian system. Such decree should also clarifies possible incentive mechanisms for infrastructure which are classified as "strategic". |

## Expected Gas Sourcing

LNG (DZ,QA,US), Nigeria, Trinidad and Tobago, Equatorial Guinea

## Comments about the Third-Party Access Regime

The TPA exemption has been granted as per EC Decision issued on 7.5.2012 and Italian Ministry of Economic Development Decree issued on June 6th, 2012. Nuove Energie is currently evaluating the possibility to revise its initial position of full TPA exemption.

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Main Driver Explanation | Diversification: the presence of PE terminal facilitates a strong diversification of supply (in terms of both origins and counterparties) and makes Italy and Europe more resilient in case of disruption and / or increase in prices of the other gas sources System flexibility: Porto Empedocle LNG terminal is a strategic infrastructure for the supply of power technology like the CCGT plants, which provide flexibility to the electric system, also to compensate swift changes in electricity generation from intermittent renewable source. It is a matter of fact that the growing level of intermittent renewable energy sources requires more flexible operation of gas-fired power plants and that this implies a more flexible gas system |
| Benefit Description     | The LNG terminal will provide some storage capacity within its tanks allowing to provide flexibility to the entire system and capability to cope gas emergency. The Porto Empedocle LNG terminal will represent a future platform for additional LNG services for ship bunkering and truck loading that are not currently existing in Italy.                                                                                                                                                                                                                                                                                                                                                                                                               |

## Barriers

|              |                                                                                                 |
|--------------|-------------------------------------------------------------------------------------------------|
| Barrier Type | Description                                                                                     |
| Financing    | in the current italian market context, the PCI project status would help to finance the project |

Time Schedule

|                        |  |  |  |  |  |  |
|------------------------|--|--|--|--|--|--|
| Grant Obtention Date   |  |  |  |  |  |  |
| Delay Since Last TYNDP |  |  |  |  |  |  |

Delay Explanation      The temporary suspension of the validity of the July 2009 EIA by Italian Environment Ministry Decree (April 18, 2013), has delayed up to date the Services Conference procedures, the award of Final Authorization and therefore the project construction and commissioning dates The final resolution recently issued in February 2015 restoring the validity of the EIA will resume the last phase of permitting process (Services Conference).

**Expected Gas Sourcing**

LNG for the terminal may come from any LNG producer in the world . We envisage a liquid LNG market with a crescent importance

**Benefits**

| Benefit Description     | <i>Market Integration (Increase of competition) and Security of Supply. The Italian Storage system is a market characterized by two operators (Stogit Spa 97% and Edison Stoccaggio Spa 3% of the market share) and our project will enhance the level of competition at national level. it is necessary having in mind that only storage jointly with production are present on national territory and can intervene in case of serious gas crisis. New storages are more flexible to operate for security of supply. The project brings some benefits in case of disruption on critical gas supply routes (such as Ukraine and Libya) towards Italy and more broadly Europe The project is also synergic to develop Italian system as a gas hub and to improve Europe security of supply.</i> |

Barriers

| PCI Benefits                         | Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU, Project aims at supplying directly or indirectly at least two Member States                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Specific Criteria Fulfilled Comments | Security of Supply and Market Integration (Increase of competition); The Italian Storage system is a market characterized by two operators (Stogit Spa 97% and Edison Stoccaggio Spa 3% of the market share), and our projects will enhance the level of competition at national level. It is necessary having in mind that only storage jointly with production are present on national territory and can intervene in case of serious gas crisis. New storages are more flexible to operate for security of supply and to work as back up to renewables. The project increases security of supply on European gas system. The project brings some benefits in case of disruption on critical gas supply routes (such as Ukraine and Libya) towards Italy and more broadly Europe Our project is also synergic to develop Italian system as a gas hub and to improve Europe security of supply. |

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Main Driver Explanation |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Benefit Description     | Security of Supply and Market Integration (Increase of competition); The Italian Storage system is a market characterized by two operators (Stogit Spa 97% and Edison Stoccaggio Spa 3% of the market share). The project will enhance the level of competition and security of supply at national level. It's synergic to develop Italian system as a gas hub and to improve Europe security of supply. Palazzo Moroni has an optimal working gas/withdrawal capacity ratio which is in line with the Italian energy strategy. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                               |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory      | Authority has set a new regulatory framework for 2015-2018, which was really different from the previous. In 2018 the Authority will set the new framework for 2019-2022. |
| Permit Granting | Delays with local permitting. The project has already achieved important authorization such as EIA and Seveso.                                                            |

Bordolano first phase

| Description                                          | <p>Complete the realisation of a Gas Transportation system on Adriatic coast. The project foresees the development under 5 phases of the main backbone and the compression station. Of these 5 phases, one section is already completed and another one is under construction. - 1 Construction of 110 km 24" LARINO-CHIETI - 55 km 20" CHIETI - CELLINO (already completed and running) - 90 km 20" CELLINO - SAN MARCO (15 km completed and 75 km under construction) - Construction of 32 km 24" SAN MARCO Recanati - Construction 3 MW compression station SAN MARCO</p> <p>The construction and operation of each project section has been already authorized by MISE (Italian Ministry of Economic Development) as part of the National Gas Network. Decree No. 14624 of 25 May 2016, the Italian Ministry of Economic Development has assessed the consistency of SGI's TYNDP with the National Energy Strategy. SGI has included the project in its own TYNDP, as submitted to MiSE and the NRS (AEEGSI). TYNDP approval process is currently being revised due to the transfer of the relevant competences from MiSE to AEEGSI.</p> |                              |                |

| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled          | Security of Supply                                                                                                                                                                                                                                                      |
| Specific Criteria Fulfilled Comments | The project appears necessary considering that the stress test on the existing pipeline system have proved critical issues in case of emergency or peak demand in an area where gas flows from the south and from the north merges at a relatively low pressure regime. |

|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver Explanation | <p>The construction of the adriatic coast pipeline will strengthen the flow capacity to SGI's network from the South. The project will enable a new connection to the Stogit's San Salvo Storage facility and to additional potential future storage facilities planned in the area. It is expected to deliver incremental capacity northward through connection to existing storage facilities (Cellino) and will complete a major integrated gas transport system in Central Italy. The pipe, together with the construction of the planned compression station, will allow the return to SRG of volumes coming from Stogit San Salvo storage. The project will strengthen an area where gas flows from the south and from the north merges at a relatively low pressure regime. In critical conditions this set up will face problem in meeting peak gas demand. The project will add 5 mil standard cubic meters per day to the peak gas capacity in reverse flow mode (both in the flow south/north and in the flow north/south).</p> |
| Benefit Description     | <p>Increasing flexibility and allowing reverse flow along the Adriatic coast: 1) support the management of Emergency situation by Snam and 2) ensure the capability to meet increasing peak demand requirement in the area.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Description                                          | <p>Construction of an onshore Gas Transportation Network on Sardinia island, to be supplied at least by 1 or more micro/mini/midi LNG regassification terminals with small scale LNG capabilities and/or by an offshore connection to mainland. The project foresees the development of the main backbone of the national gas transmission grid (national line) and the parallel connection of the regional lines: - Construction of 292,4 km of 16" national backbone - Additional 657 km of regional primary and secondary connections with diameter ranging from 4" to 16"</p> <p>SGI has included the project in its own TYNDP, as submitted to MiSE and the NRA (AEEGSI). TYNDP approval process is currently being revised due to the recent transfer of the relevant competence from MiSE to AEEGSI. Sardinia Region Energy and Environmental Plan as issued on 28.01.2016, "PEARS 2015-2030 Proposta Tecnica". Decree No. 14624 of 25 May 2016, the Italian Ministry of Economic Development has assessed the consistency of SGI's TYNDP</p> |                              |                     |

| Specific Criteria Fulfilled Comments | This Project will halt Sardinia industrial decline driven - also - by higher than average energy cost. The high energy cost is a barrier to the development of new competitive productive activities. Current generation capacity is coal/fuel oil based. Gas substitution is an upside which will bring environmental benefits. An integrated onshore gas + Small Scale LNG development will be the catalyst for developing LNG bunkering leveraging on Sardinia ferry connections and its position at the centre of the Med. |

|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Main Driver Explanation | Sardinia, located off the West coast of Italy, has ca. 1.7mn inhabitants and is currently the only region in Italy that does not have a proper gas infrastructure Sassari, Nuoro, Oristano and Cagliari have already a developed local distribution network, supplied by aired LPG; local distribution companies are developing a network covering ca. 40% of the population. Additional investments would significantly improve gas penetration in the island. MSE, the Sardinia region and AEEGSI are assessing possible solutions to Sardinia's gas supply via LNG |
| Benefit Description     | Converting coal and oil fired power stations to gas will lead to a substantial reduction of CO2 emissions. A single Sardinia price for gas - enabled by a region wide gas Network - will also bring a relevant cost reduction for Sardinia citizens and industries, whose energy prices can be as high as twice Italian average.                                                                                                                                                                                                                                      |

**Barriers**

| Barrier Type | Description                                                                                                                                                                                                                                                                    |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | NRA to clarify: 1) that Tariff Regime applicable in mainland Italy is also applicable on Sardinia gas network development, irrespective of its physical connection with Italy's Network; 2) Tariff and TPA Regime for SSLNG (this only indirectly relevant to onshore network) |
| Others       | Time-table of the project can be affected by the effective realization of LNG Terminals                                                                                                                                                                                        |

| Description                                          | Expected total capacity – 1 bcm, working capacity - 500 mcm. Storage will create conditions for gas reserve storage in Lithuania, increase the security of supply and contribute to the creation of national gas market. |                         |                     |

| Description                                          | The project is aimed to establish a well-functioning new bidirectional interconnection between the Polish and Lithuanian gas transmission systems to integrate the isolated gas markets of the Baltic States into the EU gas grid, by introducing an alternative gas supply route to the Baltic States. By implementing the project a 165 km-long and 700 mm-diameter pipeline and gas pressure reduction and metering station will be constructed on Lithuania's side. |                              |                |
| Regulatory Decisions and similar material conditions | On 11 August 2014 ACER adopted a decision No 01/2014 On The Investment Request including Cross-Border Cost Allocation for The Gas Interconnection Poland-Lithuania Project of Common Interest No. 8.5.                                                                                                                                                                                                                                                                  |                              |                |

| Description                                          | The project aims at enhancing the capacity of the gas systems interconnection Latvia-Lithuania, ensuring safe and reliable natural gas supply, and achieving a more effective use of the infrastructure and better integration of the gas markets of the Baltic States. It is beneficial and important for the creation of the regional gas market. After the implementation of the project, the bi-directional capacity between Latvia and Lithuania will be increased up to 124.8 GWh (12 MCM) per day. The project is conditional upon other projects diversifying gas flows to be carried out in the Baltic States. |                              |                |

| Main Driver             | <u>Market Demand</u>                                                                                                                                                                                                                                                                                                                                                                            |
| Main Driver Explanation | <u>Increased gas flows between Latvia and Lithuania</u>                                                                                                                                                                                                                                                                                                                                         |
| Benefit Description     | The enhancement of bi-directional capacity of up to up to 124.8 GWh (12 MCM) per day between Latvia and Lithuania will increase the opportunities for a cross-border trade, higher usage of Latvia's UGS and ensures safe and reliable natural gas supply, flexibility of the transmission systems both in Lithuania and Latvia and better integration of the gas markets of the Baltic States. |

| Description                                          | <p>As this pilot action turned to be a success story, Klaipėdos nafta decided to develop a project centred on the purchase of the FSRU Terminal, i.e. exercise the purchase option available within the pilot action’s existing TCP contract. The long-term solution and the project need is an assurance of the already achieved substantial regional benefits of Klaipeda LNG terminal to be utilised to the full extent in the future. The benefits include security of supply, availability of alternative natural gas supplies, LNG break bulk infrastructure and effective natural gas price cap. Purchase of the FSRU would also facilitate substantially lower regasification and reload tariffs and consequentially lower the effective natural gas price cap for all consumers in the region, as well as facilitate faster development of small and mid-scale LNG infrastructure and faster switch-over to LNG from more polluting fuels.</p> |              |              |

Comments about the Third-Party Access Regime

Tariff regulation created by Lithuania NRA and Parliament, which was also approved by EC -State aid SA.36740 (2013/NN) – Lithuania. All services of Klaipeda LNG terminal is regulated.

Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                         |
| Main Driver Explanation | Ensure certainty on the SoS in the region Without a project there is uncertainty on: - compliance with N-1 standard - competition of gas supply in the market - regional gas market                                                                                                                                                                                                                                    |
| Benefit Description     | Ensure certainty on independence on the single external natural gas supplier Ensure certainty on diversification of natural gas supply sources Ensure certainty to the regional gas market players and create real gas market ensuring natural gas supply in the Baltics The project is also driven by a market demand to have flexibility in choosing different sources of supply, to be connected with global market |

Barriers

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | According to LNG terminal Law, all fixed LNG terminal expenses are covered via gas transmission tariff, while variable costs are included in regasification tariff. Due to low or none variable costs, capacity reservation is free of charge. Additional income from other regulated LNG terminal activities shall cover fixed terminal expenses and no additional profit shall be experienced.                         |
| Political    | Klaipeda LNG terminal project is supported by all political institutions in Lithuania (i.e. President office, the Government, Ministries, Parliament, other). Project is supported by COM and pilot action is regarded as a success story: <a href="https://ec.europa.eu/energy/sites/ener/files/documents/1_EN_ACT_part1_v10-1.pdf">https://ec.europa.eu/energy/sites/ener/files/documents/1_EN_ACT_part1_v10-1.pdf</a> |
| Financing    | Amortization rates                                                                                                                                                                                                                                                                                                                                                                                                       |
| Financing    | Availability of funds and associated conditions                                                                                                                                                                                                                                                                                                                                                                          |

| Description                                          | <p>The Incukalns Underground Gas Storage facility is the only gas storage of the East-Baltic region located within the EU. Reliable operation of Incukalns UGS is essential for the whole East-Baltic Region because considerable amount of gas in the region is used for heating, therefore, winter and summer consumption figures differ few times, and the storage is used for meeting of gas demand during the heating season. Analysis of gas flows in the East-Baltic region carried out jointly by TSOs showed that daily withdrawal capacity of Incukalns UGS shall be increased, and especially it is important in the end of withdrawal season when currently withdrawal capacity drops significantly. After completion of enhancement of Incukalns UGS, increase of withdrawal capacity will have significant positive impact on efficiency of operation of the whole East-Baltic joined gas system and will increase security of supply. After construction of GIPL pipeline and Balticconnector the market area for Incukalns</p> |                         |                |

|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Main Driver Explanation | East-Baltic TSOs joint analysis. Other important driver is security of supply determined by the joint risk assessment of Lithuania, Latvia and Estonia. After competition of GIPL and Balticconnector it is expected that market area for the storage will also include Poland and Finland                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Benefit Description     | The major benefit of the project is improvement of the security of supply for the East-Baltic region in case of gas supply disruption. In addition, jointly together with other gas infrastructure projects in the Baltic region (Intra-Baltic Connections, GIPL, Balticconnector and LNG terminal in the Gulf of Finland, Klaipeda LNG terminal) the project increases security of gas supply to the consumers by contributing into diversification of gas supply sources and routes, as well as integrating gas networks of the Baltic countries and Finland into the common EU gas network. It also provides possibility to optimize the gas flows in the East-Baltic region by offering required volumes of gas for business purposes and in case of emergency and contributes towards creation of a liquid gas market in the East-Baltic region and possibility to be used as a gas hub for the whole region. |

**Barriers**

| Barrier Type | Description                                     |
|--------------|-------------------------------------------------|
| Market       | Lack of market support                          |
| Financing    | Availability of funds and associated conditions |

Enhancement of Latvia-Lithuania interconnection (Latvian part)

| Description                                          | The project is aimed at the increase of interconnection capacity between Latvia and Lithuania and on Latvian side includes construction of a new pipeline Riga-Iecava and Iecava-Lithuanian border. On Lithuanian side it is planned to increase the capacity of Kiemenai metering station . The project is conditional upon other projects (GIPL) and gas market development in the Baltic countries. |                              |                     |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                         |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                         |
| Specific Criteria Fulfilled Comments |                                                                                                                                                                                                                                             |

**Expected Gas Sourcing**

Russia, LNG ()

## Benefits

|                         |                                                                                                                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                              |
| Main Driver Explanation | Main driver of the project will be increased gas flows between Lithuania and Latvia.                                                                                                                                                                                                                       |
| Benefit Description     | The enhancement of bi-directional capacity up to 12 mcm/d between Latvia and Lithuania could increase opportunities for cross-border trade, access to Incukalns UGS for Lithuania and Poland, security of supply, market integration, flexibility of gas transmission systems of Latvia and Lithuania etc. |

| Description                                          | <p>Malta is a small island Member State with no gas interconnections to the European network. This project addresses the 'Transmission' component of PCI 5.19 'Malta Connection' and reflects the results from the pre-feasibility study completed in April 2015. The study identified a 22 inch diameter and 155km long gas pipeline interconnection (i.e. TRA-N-031) between Gela (Sicily) and Delimara (Malta) as the most economically feasible solution to be considered as Phase 1 for the PCI implementation; and which will primarily end Malta's isolation from the Trans European gas network. The possibility of exporting gas to Italy sourced from an FSRU located approx. 12km offshore from Malta (i.e. LNG-N-211) is to be considered as Phase 2 of the PCI.</p> |                              |                |

**PCI Details**

PCI Benefits    Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity

General Criteria Fulfilled    Yes

Specific Criteria Fulfilled    Competition, Market Integration, Security of Supply, Sustainability

Specific Criteria Fulfilled Comments The project will contribute to market integration as it will eliminate Malta's isolation by connecting to the European gas network. It will improve Malta's security of energy supply and diversification of fuels by reducing the current dependence on imported fuel oils. The project will support objectives of sustainability as it will contribute to the reduction of GHG emissions and will support back-up for renewable energy. It will contribute to diversification of import sources and thus enhance competition in Italy. In Malta, it will provide access to a potentially lower cost fuel for power generation and potentially for maritime LNG bunkering and the inland market sector thereby improving competitiveness and affordability.

**Time Schedule**

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Delay Since Last TYNDP | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Delay Explanation      | The pre-feasibility study was completed in April 2015 and concluded that the optimal solution for the natural gas interconnection (Phase 1) between Malta and continental Europe would be a 560mm diameter pipeline interconnection between Gela in Sicily and Delimara in Malta. As part of the pre-feasibility study, the project timeline for Phase 1 was analysed for each distinct phase of the project and updated to reflect more realistically the expected time required for complete project implementation. The main project stages include the basic design studies, permitting process and related environmental studies, detailed engineering design (FEED), tendering procedures and finally the construction and commissioning. The re-scheduling of 39 months in the commissioning date compared to the TYNDP 2015 reflects this result. |

**Expected Gas Sourcing**

Algeria, Caspian Region, Libya, Norway, Russia, LNG ()

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Main Driver Explanation | The main driver is the elimination of Malta's isolation from the European Gas network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Benefit Description     | The project will end Malta's isolation from the Trans-European gas network and thus contribute to gas market integration and improved security of energy supply and diversification of fuels for the island. The project is expected to support objectives of sustainability as it will contribute towards the reduction of GHG emissions whilst also acting as a back-up for renewable energy. It will contribute towards diversification of imported sources, thus enhancing competition in Italy. In Malta, it will provide access to a potentially lower cost fuel for both power generation and the inland market thereby improving competitiveness and affordability. |

## Connection of Malta to the European Gas Network - LNG Regasification

| LNG-N-211                                            | Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | LNG Terminal | Non-FID |

| Update Date                                          | 22/06/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |         |
| Description                                          | <p>This project addresses the 'LNG Regasification Infrastructure' component of PCI 5.19 'Malta Connection' and reflects the results from the pre-feasibility study concluded in April 2015 which identified the Malta-Italy gas pipeline interconnection (TRA-N-031) as the first phase of the PCI which will end Malta's isolation from the Trans European gas network. Following completion of this first phase and subject to further in-depth analysis and market development; a second future phase consisting of a Floating Storage and Regasification Unit berthed approximately 12km offshore from Malta together with an associated pipeline infrastructure to Delimara (Malta) is being planned. This project, besides meeting Malta's natural gas requirements, shall provide for the possibility of exporting natural gas to the European Natural Gas network through the gas interconnector which will enable it to operate in bi-directional flow mode. TRA-N-031 and LNG-N-211 are complementary projects.</p> |              |         |

| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Specific Criteria Fulfilled Comments | The overall PCI will end Malta's isolation from the Trans-European gas network and thus contribute to gas market integration, improved security of energy supply and more diversified sources, routes, suppliers of energy for the island and improved competitiveness and affordability. It is expected to support objectives of sustainability as it will contribute towards the reduction of GHG emissions. The 'LNG infrastructure' component besides meeting Malta's natural gas requirements including future demand for maritime LNG bunkering; shall also achieve the gas N-1 infrastructure requirement as there would be two sources of natural gas supply to Malta and provide for the possibility to export gas to Italy/Europe. The LNG component will also complement the provisions of Directive 2014/94/EU and the Energy Union strategy in fuel of an added entry point of natural gas to the EU i.e. effectively contributing towards the diversification of sources, routes and suppliers of gas to the EU. |

## Time Schedule

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Delay Since Last TYNDP | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Delay Explanation      | Since the last TYNDP, a pre-feasibility study of the PCI was completed in April 2015. The re-scheduling above for the gas pipeline interconnector component of the PCI reflects conclusions from this study which identified the gas pipeline interconnection (TRA-N-031) between Sicily and Malta as Phase 1 for the PCI implementation; whilst the possibility of exporting gas to Italy sourced from an FSRU located approx. 12km offshore from Malta (i.e. LNG-N-211) is to be considered as Phase 2 of PCI 5.19. |

## Expected Gas Sourcing

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Main Driver Explanation | The main project driver for this component of the PCI is the Gas Security of Supply EU Regulation No. 994/2010. This second phase of the PCI will achieve the N-1 infrastructure requirement and contribute to the overall system flexibility and interoperability. The infrastructure will be capable to offer capacity for bi-directional flow through the gas pipeline interconnector.                                                                                                                                                                                                                                                                                                                                                            |
| Benefit Description     | The 'LNG infrastructure' (i.e. LNG-N-211) component besides meeting Malta's gas requirements, including future demand for maritime LNG bunkering (i.e. complementing provisions of Directive 2014/94EU on the deployment of alternative fuels infrastructure); it shall also achieve Malta's N-1 infrastructure requirement for gas as there would be two sources of gas supply to Malta. Since this project also provides for the possibility of export of gas to the Trans European gas network, Europe and Italy in particular; the project would effectively mean a new entry point of natural gas within the EU. This would complement the Energy Union's strategy towards the diversification of sources, routes and suppliers of natural gas. |

#### Expected Gas Sourcing

LNG ()

#### Comments about the Third-Party Access Regime

The exemption was applied for in March 2006; the exemption has been granted by the Dutch Minister on 14 July 2007; the EC gave its approval on 2 October 2007. Was not sure what to fill in regulated or negotiated. It is exempted

| Description                                          | This projects enables additional flow at the interconnection point between GTS and Gaspool at Oude Statenzijl. Market demand in the Netherlands and surrounding countries to compensate for declining indigenous production is an important driver for additional imports. |                              |                     |

## H-gas conversion of L-gas export border points

TRA-N-882

Project

Pipeline including CS

Non-FID

Update Date

20/05/2016

Non-Advanced

Description

Due to the of production of the Groningen field, L-gas export from the Netherlands to Germany is reduced. This projects enables the flow of H-gas via the existing L-gas border station at Oude Statenzijl. This project is linked to project initiatives of Gasunie Deutschland and GTG Nord.

| Description                                          | <p>GIPL aims to connect the gas transmission systems in Poland and Lithuania and, consequently, enable the integration of the isolated gas markets in the Baltic States (and Finland) with the Polish and EU gas markets. This will contribute to the creation of a regional gas market, enhancement of competition and the security of gas supply. The project will also provide an access to the global LNG market for the Baltic States via the LNG terminal in Świnoujście. The construction of GIPL, except the above benefits for security and diversification of gas supplies in the Baltic region, will also allow to connect the Baltic States with the CEE countries, thus providing strategic link between the BEMIP and North-South East priority corridors. As part of the project implementation on the Polish side, it is foreseen to construct the pipeline between Holowczyce and PL-LT border and construct CS Gustorzyn. The commissioning year of the project has been moved to 2021.</p> |                              |                |

| Delay Explanation      | GAZ-SYSTEM encountered a number of problems mainly regarding the extension of CS Rembelszczyzna. These issues concern permitting and environmental aspects. They significantly undermine the implementation of the project according to the previous time schedule. Due to the significance of the project GAZ-SYSTEM proposed a new routing of the pipeline in Poland. The reason for changing the routing is to strengthen the engineering and technical aspects of the project and to commission the project with a shortest possible delay when compared to the implementation of GIPL in the base scenario. |

| Main Driver Explanation | Regulation SoS, market integration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Benefit Description     | The very aim of GIPL is the integration of the isolated gas markets of the Baltic States into the EU gas grid by introducing an alternative gas supply route to the Baltic States. This interconnection will diversify the gas supply sources, increase the security of supply and enhance competition on the gas market in the Baltic States. For the Baltic States, GIPL will provide the access both to EU gas spot market and to the global LNG market via LNG terminal in Świnoujście. For the Polish market players, GIPL will provide the opportunity of using Latvian Incukalna UGS. Also through GIPL, gas could be supplied to currently non-gasified areas in Poland and Lithuania. |

Barriers

| Barrier Type    | Description                                                                                                                                                                                                                                                                         |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the project.                                                                                                                                                                                             |
| Political       | Lack of guarantees of covering entire project costs when the project is not commercially viable in all market scenarios (SoS project).                                                                                                                                              |
| Others          | Lack of guarantees of covering entire project costs when the project is not commercially viable in all market scenarios (SoS project). Risk of the lack of interest in capacity booking in the first period of operation due to immaturity of the gas markets in the Baltic States. |
| Market          | Lack of market maturity                                                                                                                                                                                                                                                             |

| Description                                          | <p>The investment tasks within the project constitute essential elements of the planned North-South gas interconnections in Central Eastern and South Eastern Europe. The corridor covers Eastern Poland and is planned to be connected to two interconnectors, i.e. Poland – Lithuania (GIPL) and Poland – Slovakia interconnections. Implementation of the project will allow for significant volumes of gas to be transported via the corridor in Eastern Poland towards PL-SK interconnection and the GIPL project. This investment plays a key role in the integration of Baltic States (via GIPL) with the CEE region along the North-South axis. It will also enhance the access to the USG Strachocina that have large expansion potential and may serve as essential security of supply infrastructure in the CEE region. The investment tasks are planned to be commissioned in 2023.</p> |                              |                     |

| Main Driver Explanation | Regulation SoS, market demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | The project will allow to transport significant volumes of gas via PL-SK and PL-UA interconnections. It will also enhance the access to the USG Strachocina that have large expansion potential and may serve as essential security of supply infrastructure in the CEE region. Construction of the pipelines within this project, together with completion of the PL-SK interconnection and GIPL, will have a positive impact on the competition in the CEE and Baltic regions, as the project will provide a possibility to open the market for more gas suppliers. This would in turn mean ending the state of major dependency on one single gas supplier for the countries in the respective regions thanks to the potential access to gas deliveries from new sources. The projects in Eastern Poland are located in the area which offers the possibility to extract unconventional gas. If reserves are confirmed, the transmission infrastructure in Eastern Poland might be used to transport gas to adjacent systems. |

Barriers

| Barrier Type    | Description                                                                                                                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the project.                                                                                                                                                                                            |
| Others          | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |
| Financing       | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |

North - South Gas Corridor in Western Poland

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                              |                |

| Description                                          | <p>The investment tasks within the project constitute essential elements of the planned North-South gas interconnections in Central-Eastern Europe. The corridor covers Western Poland and it is planned to be connected to PL-CZ interconnection. Implementation of the investment tasks within this project will allow for exploiting full potential of gas transmission from LNG terminal Świnoujście and Baltic Pipe through the North-South gas corridor to other CEE countries. This infrastructure will be used for purposes of PL-CZ and PL-SK interconnections. It will also enable the possibility of gas transmission to Ukraine. The investment tasks are planned to be commissioned in 2018.</p> |                              |                |

### Expected Gas Sourcing

Caspian Region, Norway, Russia, LNG ()

### Benefits

|                         |                                                               |
|-------------------------|---------------------------------------------------------------|
| Main Driver             | <u>Others</u>                                                 |
| Main Driver Explanation | The project is driven by SoS and market demand considerations |

Benefit Description Implementation of the investment tasks within this project will allow for ensuring full functionality of PL-CZ and PL-SK interconnections. This project will have an impact on: enhancing functionality of transmission system in Central and Southern Poland in order to facilitate better operational functioning of the upgraded PL-CZ interconnection and to initiate gas flow on the planned PL-SK interconnection; increasing the security of supply sources, routes and counterparts, as well as on providing an overall flexibility for the CEE region; improving European gas grid interconnections; creating a well-functioning internal market in the CEE region by ensuring high reliability of the cross-border transmission between Poland, the Czech Republic and Slovakia.

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the Project.                                                                                                                                                                                            |
| Others          | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |

| Description                                          | <p>Baltic Pipe aims to connect the gas transmission systems in Poland and Denmark. The project consists of an offshore pipeline between Poland and Denmark and relevant onshore infrastructure reinforcements in both countries. Baltic Pipe will enable the transmission of Norwegian gas to the CEE region to cover the gas demand in Poland and possible leverage for market coupling potential in the Baltic States and Central-Eastern Europe, including Ukraine. The project may also bring the opportunity for the Danish and Swedish markets to diversify its supply potential in the context of declining production in the Danish part of the North Sea. The Baltic Pipe is intended to contribute to diversification of gas supply and increase competition, integration and security of supply in the CEE region (including Ukraine) and the Baltic States.</p> |                              |                     |

| Benefit Description     | <p>Baltic Pipe will have a significant impact on: increasing security of supply in the CEE and Baltic Sea region by diversifying supply routes, sources and counterparts; creating well-interconnected gas infrastructure in the Baltic Sea region; enhancing competition on the regional markets (CEE and the Baltic region); promoting natural gas as a reliable, competitive and environmentally-friendly source of energy e.g. in the power generation and transport sectors. The Baltic Pipe project also contributes to the NSI EAST and BEMIP priority corridors, as the project will allow to transport gas from North Sea deposits to the CEE countries, namely to the CZ, SK and UA (via the North-South corridor in Poland, PL-CZ, PL-SK and PL-UA interconnections) and to the Baltic region (via GIPL to the Baltic States, and further to FI via Baltconnector). Since the project is bidirectional it will also provide the security of supply benefits for DK and SE (access to LNG).</p> |

Barriers

| Barrier Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the project.                                                                                                                                                                                                                                                                                                                                          |
| Others          | There is a lack of confidence and risk-taking in the private gas sector to the Baltic Pipe project, as it requires coordinated long term business cases, fundamental change in current business models/subsidies and involves many parties from at least three countries (PL, DK, NO). Granting the EU priority for the project and a grant to the Polish and Danish TSOs may well accelerate the implementation of the project. |

### Upgrade of LNG terminal in Świnoujście

| LNG-N-272                                            | Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | LNG Terminal | Non-FID      |

| Update Date                                          | 09/05/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |              | Non-Advanced |
| Description                                          | The main objective of the project is to upgrade the capacity of the LNG terminal in Swinoujście from 5 up to 10 bcm/y. The project will enable to benefit from the economies of scale, as relatively low investment costs (no need to construct the facility from scratch, the majority of costs will be related to the construction of the 3rd storage tank) may bring further benefits to gas consumers in the Baltic Sea area and the CEE region (increase of SoS, competition and liquidity, decrease of gas prices). |              |              |
| Regulatory Decisions and similar material conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |              |              |

#### Capacity Increments Variant For Modelling

#### Expected Gas Sourcing

LNG (), LNG exporting countries

#### Benefits

Main Driver Others

Main Driver Explanation Implementation of the project is driven by SoS and market demand considerations

Benefit Description

The extension of the LNG terminal in Swinoujscie will have an impact on: increasing security of supply in the Baltic Sea and CEE regions by diversifying supply routes, sources (new physical source of supply for both regions) and counterparts (access to global LNG market); enhancing competition on regional markets; promoting natural gas as a reliable, competitive and environmentally-friendly source of energy e.g. in the transport sector (maritime transport); creating a physical hub in Swinoujscie and/or a virtual hub in Poland; establishing adequate technical conditions necessary to cover the forecasted growth of the gas demand in Poland and possible leverage for market coupling potential in the Baltic Sea region and in Central-Eastern Europe. The LNG terminal in Świnoujście contributes to the NSI EAST corridor, as the supplies from Świnoujście may be directed through upgraded transmission system in Poland, PL-CZ PL-SK and PL-UA interconnections towards the CEE region.

**Barriers**

Barrier Type

Description

Permit Granting

Efficient permitting procedures are necessary for timely implementation of the project.

Others

Possible lack of risk-taking in the private gas sector which would result in insufficient long term commitments to enable the investment decision for the infrastructure operator. It could be mitigated by external subsidies (EU) to cover positive externalities such as SoS, positive environmental impact (reduction of emissions due to fuel change in maritime transport) and supply diversification in the Baltic area and the CEE region (including Ukraine).

| Description                                          | <p>The project aims to increase the cross-border capacity between Poland and the Czech Republic by establishing a large transportation corridor that will allow for flexible transport of gas in Central-Eastern Europe within the North-South corridor. The development of the physical interconnection between Poland and the Czech Republic will contribute to reinforcement of the effective operation of the gas transmission systems, efficient gas exchange between the markets, as well as increase of the security of supply not only for Poland and the Czech Republic, but also for the CEE region by enabling the supply link with other European gas market and global LNG market via the terminal in Świnoujście. The project consists of Poland-Czech Republic Interconnector (STORK II) and internal transmission projects in Poland and in the Czech Republic. Detailed information on these projects is provided in subsequent sections in the project questionnaire.</p> |                              |                |

| Main Driver Explanation | Regulation SoS and market integration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Benefit Description     | Implementation of PL-CZ interconnection will have an impact on: increasing the security of gas supply, providing overall flexibility for the CEE region and diversifying the supply routes for the CEE region; improving European gas grid interconnection; increasing the security and reliability of the cross-border gas transmission between the Czech Republic and Poland (fulfilment of N-1 rule in Poland); creating a robust, well-functioning internal market in the Czech Republic and Poland and promoting the competition; contributing to the creation of an integrated and competitive gas market in the CEE region; establishing adequate technical conditions necessary to cover the forecasted growth of the gas demand in Poland based on the development of the power generation sector and possible leverage for market coupling potential in Central-Eastern Europe. |

## Barriers

| Barrier Type    | Description                                                                                                                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the project.                                                                                                                                                                                            |
| Political       | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |
| Others          | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |

Poland - Slovakia interconnection (PL section)

| TRA-N-275                                            | Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Pipeline including CS | Non-FID  |

| Description                                          | The main goal of the project is to create an important part of the North-South gas interconnections in Central-Eastern Europe by implementing a missing interconnection between the transmission systems in Poland and Slovakia and, thus, increase the security of gas supplies in Central-Eastern Europe through the diversification of supply sources and routes, as well as integration of Sub-Carpathian Market Area and enhancing market functionality. The project consists of Poland-Slovakia interconnector and relevant internal transmission investments in Poland and in Slovakia to ensure full functionality of the interconnection. Detailed information on these projects is provided in subsequent section in the project questionnaire. |                       |          |

| Main Driver Explanation | Increase of SoS in the CEE region. Integration of gas infrastructure in the CEE region by constructing a cross-border interconnection between PL and SK that is currently missing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Benefit Description     | Implementation of PL-SK interconnection will have an impact on: creating the cross-border capacity between Poland and Slovakia by establishing a large transportation corridor that will allow for flexible transport of gas in Central Europe within the North-South axis; increasing the security of gas supply and diversification of supply routes for the CEE region; improving European gas grid interconnection; increasing the security and reliability of the cross-border gas transmission between Slovakia and Poland (contribution to N-1 standard in Poland and Slovakia); creating a robust, well-functioning internal market in Slovakia and Poland and promote the competition; establishing adequate technical conditions necessary to cover the forecasted growth of the gas demand in Poland based on the development of the power generation sector and possible leverage for market coupling potential in Central-Eastern Europe. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Efficient permitting procedures are necessary for timely implementation of the Project.                                                                                                                                                                                            |
| Political       | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |
| Others          | Due to the project drivers which are mainly related to SoS in Central-Eastern Europe, the project does not meet the criterion of economic viability, so the external co-financing is indispensable. Lack of external financial support may be a serious barrier in implementation. |

| Description                                          | <p>The objective of the project is to create a large transportation corridor between Poland and Ukraine. Scope of the Project: 1. Pipeline DN1000 Hermanowice-PL/UA border -1,5 km 2. Metering station in Poland 3. Extension of CS Strachocina Necessary additional transmission system development in Poland 1. Pipeline DN700 Hermanowice-Strachocina, 72 km 2. Pipeline DN1000 Strachocina-Pogórska Wola, 98 km 3. Pipeline DN1000 Pogórska Wola-Tworzeń, 160 km 4. Pipeline DN1000 Tworóg-Tworzeń, 56 km The Project will contribute towards: • establishment of a well-integrated gas market in the region (PL, UA, CZ, SK, HU, RO, MD) • diversification of gas routes and sources for Ukraine • enhancement of security of gas supply for Ukraine • reducing dependency on single gas supplier for Ukraine • strengthening energy solidarity between EU Energy Community and EU contracting countries • access to the gas storages in Ukraine for Poland and EU countries</p> |                       |              |

|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver Explanation | The objective of the project is to create a large transportation corridor between Poland and Ukraine which will contribute towards: • establishment of a well-integrated gas market in the region (PL, UA, CZ, SK, HU, RO, MDA) • diversification of gas routes and sources for Ukraine • enhancement of security of gas supply for Ukraine • reducing dependency on single gas supplier for Ukraine • strengthening energy solidarity between EU Energy Community and EU contracting countries • access to the gas storages in Ukraine for Poland and EU |
| Benefit Description     | Establishment of a well-integrated gas market in the region (PL, UA, CZ, SK, HU, RO, MD)                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Description                                          | The purpose of the project is to construct a UGS facility in salt caverns in Damasławek in central Poland. The initial working gas volume will amount for 450 mcm. UGS Damasławek will play an important role from SoS and competition perspective. It will also be instrumental in terms of ensuring proper functioning of the transmission system in Poland. |                  |              |

| Description                                          | <p>The FSRU Polish Baltic Sea Coast project is planned as the first floating terminal in Poland . It will come on stream in 2020 with annual re-gasification capacity of 4.5-9 bcm/y. The FSRU terminal will consist of one/two storage tank(s) with the capacity of 170 tcm. The project will offer its regasification capacities to gas consumers in Poland and other countries in the Baltic Sea region (supplies to be directed via Gas Interconnection Poland-Lithuania and/or LNG ships) and in Central-Eastern Europe (supplies within the North-South Gas Corridor via PL-CZ, PL-SK and PL-UA interconnections). The scope of the project is currently under assessment.</p> |              |              |

| Description                                          | The 3RD Interconnection Point (IP) PORTUGAL-SPAIN is located in the priority corridor North-South in Western Europe, and involves Portugal and Spain by crossing the border between both Member States. This project will connect both gas systems between Celorico da Beira (Portugal) and Spanish border, through a pipeline with 162 km of length. This project enables the projects TRA-N- 284 3rd IP between Portugal and Spain (Compressor Station), TRA-N-285 3rd IP between Portugal and Spain (pipeline Cantanhede-Mangualde) and TRA-N-320 Carregado Compressor Station. |                              |                |

| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled Comments | The project increases the security of supply in the Portuguese gas system and guarantees the fulfilment of the N-1 criterion of the Regulation N° 994/2010. It facilitates the integration of the Portuguese market at Iberian and European level, improving competition and providing shippers with access to alternative balancing gas enhancing transmission fluidity. It also contributes to the European gas sources diversification, as pointed out in the EC COM (2904)330 European Energy Security Strategy. At the moment, Portuguese NG system has lower diversification indexes measured both on capacity and on supply sources, than most of the European countries. The assessment carried out by the Commission on the selection process for the second List of PCI, identified a high and balanced contribution of the project, between the criterions' of the Regulation n° 347/2013: market integration, security of supply and competition. |

### Time Schedule

Delay Since Last TYNDP 3 years

Delay Explanation

Demand forecasts decrease due to the economic and financial context in Portugal and in the EU, with especial relevance to the decrease on the CCGTs demand observed in the last years, due to greater renewable power production and lower coal prices. In the Madrid Declaration from March 2015, "The 3rd Portugal-Spain interconnection should be developed in accordance" with the MIDCAT project. As a consequence the delay in the MIDCAT project has also introduced a delay in the 3RD IP between Portugal and Spain project.

**Expected Gas Sourcing**

Norway, Russia, Other LNG sources from the diversification of supply are expected, namely from the result of the integration of the Iberian m

**Benefits**

Main Driver Market Demand

Main Driver Explanation

Despite the mentioned start up dates of both the third and the fourth phases of the 3rd interconnection between Portugal and Spain, it should be noticed their planning shall be adjusted according to the real evolution of gas demand and market development in the Iberian Peninsula.

Benefit Description

This PCI will contribute to the implementation of the internal energy market and it will also bring other benefits, particularly: increase NG market liquidity between Portugal and Spain systems, by providing new infrastructure access alternatives to market players in the Iberian Peninsula; Reinforce the security of supply in case of failure in any one of the two gas systems, given the total reversibility of the new interconnection; Allow operational integration between the underground storage facilities of Carriço (Portugal) and Yela (Spain), by increasing storage capacity accessibility between both gas systems; Increase the flexibility and support of gas infrastructure to gas fired power generation in both countries; Step towards the integration of the European gas infrastructures in the context of the Gas Regional Initiative – South, by providing increased interconnection capacity and diversification of supply sources on an Internal Gas Market perspective.

**Barriers**

Barrier Type

Description

Regulatory

In simple terms and according to the current Portuguese regulation, the revenue stream respecting the part of the project allocated to Portuguese consumers (after the CBCA decision by the regulators of Portugal and Spain) will be obtained by the remuneration of the net invested capital of the project plus the amortization recovery and the opex cost recovery (subject to a mix of price cap and revenue cap regimes). Nevertheless, it's important to notice that it is not possible to predict if, when and to what extent any changes to this model may occur.

Permit Granting

A pre-application decision is expected by December 2016 and the statutory decision is expected by December 2018.

Market

Regarding the market survey, the 3rd interconnection between the gas systems of Portugal and Spain is regarded as commercially non-viable as has been demonstrated by the responses of the stakeholders to the public consultation process on the gas sector TYNDP for Portugal held in 2015 in what concerns this specific project, meaning that its potential users are not willing to make any prior commitments in terms of capacity booking.

3rd IP between Portugal and Spain (Compressor Station)

| Description                                          | The 3RD Interconnection Point (IP) PORTUGAL-SPAIN is located in the priority corridor North-South in Western Europe, and involves Portugal and Spain by crossing the border between both Member States. This project will contain a compressor station in the already existing pipeline Cantanhede-Mangualde. This project enables the project TRA-N-285 3rd IP between Portugal and Spain Spain (pipeline Cantanhede-Mangualde). |                       |              |

| Specific Criteria Fulfilled Comments | The project increases the security of supply in the Portuguese gas system and guarantees the fulfilment of the N-1 criterion of the Regulation N° 994/2010. It facilitates the integration of the Portuguese market at Iberian and European level, improving competition and providing shippers with access to alternative balancing gas enhancing transmission fluidity. It also contributes to the European gas sources diversification, as pointed out in the EC COM (2904)330 European Energy Security Strategy. At the moment, Portuguese NG system has lower diversification indexes measured both on capacity and on supply sources, than most of the European countries. The assessment carried out by the Commission on the selection process for the second List of PCI, identified a high and balanced contribution of the project, between the criterions' of the Regulation n° 347/2013: market integration, security of supply and competition. |

## Time Schedule

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Delay Since Last TYNDP | 4 years                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Delay Explanation      | Demand forecasts decrease due to the economic and financial context in Portugal and in the EU, with especial relevance to the decrease on the CCGTs demand observed in the last years, due to greater renewable power production and lower coal prices. In the Madrid Declaration from March 2015, "The 3rd Portugal-Spain interconnection should be developed in accordance" with the MIDCAT project. As a consequence the delay in the MIDCAT project has also introduced a delay in the 3RD IP between Portugal and Spain project. |

## Expected Gas Sourcing

Norway, Russia, LNG ()

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Main Driver Explanation | Despite the mentioned start up dates of both the third and the fourth phases of the 3rd interconnection between Portugal and Spain, it should be noticed their planning shall be adjusted according to the real evolution of gas demand and market development in the Iberian Peninsula.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Benefit Description     | This PCI will contribute to the implementation of the internal energy market and it will also bring other benefits, particularly: increase NG market liquidity between Portugal and Spain systems, by providing new infrastructure access alternatives to market players in the Iberian Peninsula; Reinforce the security of supply in case of failure in any one of the two gas systems, given the total reversibility of the new interconnection; Allow operational integration between the underground storage facilities of Carriço (Portugal) and Yela (Spain), by increasing storage capacity accessibility between both gas systems; Increase the flexibility and support of gas infrastructure to gas fired power generation in both countries; Step towards the integration of the European gas infrastructures in the context of the Gas Regional Initiative – South, by providing increased interconnection capacity and diversification of supply sources on an Internal Gas Market perspective. |

## Barriers

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | In simple terms and according to the current Portuguese regulation, the revenue stream respecting the part of the project allocated to Portuguese consumers (after the CBCA decision by the regulators of Portugal and Spain) will be obtained by the remuneration of the net invested capital of the project plus the amortization recovery and the opex cost recovery (subject to a mix of price cap and revenue cap regimes). Nevertheless, it's important to notice that it is not possible to predict if, when and to what extent any changes to this model may occur. |
| Market       | Regarding the market survey, the 3rd interconnection between the gas systems of Portugal and Spain is regarded as commercially non-viable as has been demonstrated by the responses of the stakeholders to the public consultation process on the gas sector TYNDP for Portugal held in 2015 in what concerns this specific project, meaning that its potential users are not willing to make any prior commitments in terms of capacity booking.                                                                                                                           |
| Market       | Lack of market support                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

3rd IP between Portugal and Spain (pipeline Cantanhede-Mangualde)

| Description                                          | TThe 3RD Interconnection Point (IP) PORTUGAL-SPAIN is located in the priority corridor North-South in Western Europe, and involves Portugal and Spain by crossing the border between both Member States. This project corresponds to a second pipeline parallel to the already existing pipeline between Cantanhede and Mangualde. |                              |                |

| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project concerns investment in reverse flow capacity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific Criteria Fulfilled Comments | The project increases the security of supply in the Portuguese gas system and guarantees the fulfilment of the N-1 criterion of the Regulation N° 994/2010. It facilitates the integration of the Portuguese market at Iberian and European level, improving competition and providing shippers with access to alternative balancing gas enhancing transmission fluidity. It also contributes to the European gas sources diversification, as pointed out in the EC COM (2904)330 European Energy Security Strategy. At the moment, Portuguese NG system has lower diversification indexes measured both on capacity and on supply sources, than most of the European countries. The assessment carried out by the Commission on the selection process for the second List of PCI, identified a high and balanced contribution of the project, between the criterions' of the Regulation n° 347/2013: market integration, security of supply and competition. |

**Time Schedule**

Grant Obtention Date

Delay Since Last TYNDP 2 years

Delay Explanation

Demand forecasts decrease due to the economic and financial context in Portugal and in the EU, with especial relevance to the decrease on the CCGTs demand observed in the last years, due to greater renewable power production and lower coal prices. In the Madrid Declaration from March 2015, "The 3rd Portugal-Spain interconnection should be developed in accordance" with the MIDCAT project. As a consequence the delay in the MIDCAT project has also introduced a delay in the 3RD IP between Portugal and Spain project.

**Expected Gas Sourcing**

Norway, Russia, LNG ()

**Benefits**

Main Driver Market Demand

Main Driver Explanation Despite the mentioned start up dates of both the third and the fourth phases of the 3rd interconnection between Portugal and Spain, it should be noticed their planning shall be adjusted according to the real evolution of gas demand and market development in the Iberian Peninsula.

Benefit Description This PCI will contribute to the implementation of the internal energy market and it will also bring other benefits, particularly: increase NG market liquidity between Portugal and Spain systems, by providing new infrastructure access alternatives to market players in the Iberian Peninsula; Reinforce the security of supply in case of failure in any one of the two gas systems, given the total reversibility of the new interconnection; Allow operational integration between the underground storage facilities of Carriço (Portugal) and Yela (Spain), by increasing storage capacity accessibility between both gas systems; Increase the flexibility and support of gas infrastructure to gas fired power generation in both countries; Step towards the integration of the European gas infrastructures in the context of the Gas Regional Initiative – South, by providing increased interconnection capacity and diversification of supply sources on an Internal Gas Market perspective.

**Barriers**

Barrier Type Description

Regulatory In simple terms and according to the current Portuguese regulation, the revenue stream respecting the part of the project allocated to Portuguese consumers (after the CBCA decision by the regulators of Portugal and Spain) will be obtained by the remuneration of the net invested capital of the project plus the amortization recovery and the opex cost recovery (subject to a mix of price cap and revenue cap regimes). Nevertheless, it's important to notice that it is not possible to predict if, when and to what extent any changes to this model may occur.

Market Regarding the market survey, the 3rd interconnection between the gas systems of Portugal and Spain is regarded as commercially non-viable as has been demonstrated by the responses of the stakeholders to the public consultation process on the gas sector TYNDP for Portugal held in 2015 in what concerns this specific project, meaning that its potential users are not willing to make any prior commitments in terms of capacity booking.

### Carregado Compressor Station

| Description                                          | The project consists of a Compressor Station in the main high pressure pipeline and it aims to increase the capacity of the pipeline section between Sines and Leiria, to enable that higher flow rates can be transported from the Sines LNG Terminal. This project enables the projects TRA-N-283 3rd IP between Portugal and Spain (pipeline Celorico-Spanish Border), TRA-N- 284 3rd IP between Portugal and Spain (Compressor Station) and TRA-N-285 3rd IP between Portugal and Spain (pipeline Cantanhede-Mangualde). |                       |          |

| Delay Since Last TYNDP | 3 years                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Delay Explanation      | Demand forecasts decrease due to the economic and financial context in Portugal and in the EU. Decrease in the demand for the CCGTs due to the low prices of the CO2 emissions. The investment in this infrastructure should be decided by 2018, with the commissioning to occur by the end of 2021. The schedule of this project is aligned and is an enabler of the PCI project 5.4 - 3rd interconnection between Portugal and Spain (TRA-N-283, TRA-N-284, TRA-N-285). |

|-------------------------|---------------|
| Main Driver             | Market Demand |
| Main Driver Explanation |               |

**Benefit Description**  
 The project aims to increase the capacity of the pipeline section between Sines and Leiria, to enable that higher flow rates can be transported from the Sines LNG Terminal. The project will increase the interoperability and system flexibility and consequently support intermittent renewable generation, mainly from the high share of wind generation capacity installed in Portugal and Spain. With the expansion of the Sines LNG Terminal and the consequent increase in their regasification capacity to RNTGN, this project will contribute for the diversification of supply sources and also supplying counter parts. From the strategic and planning point of view, the Carregado CS is proposed in order to integrate the other infrastructures of the RNTIAT, namely the Sines LNG terminal, the construction of the 3rd interconnection Portugal-Spain and the development of the Carriço underground storage (UGS).

**Barriers**

| Barrier Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory   | In simple terms and according to the current Portuguese regulation, the revenue stream will be obtained by the remuneration of the net invested capital of the project plus the amortization recovery and the opex cost recovery (subject to a mix of price cap and revenue cap regimes). These revenues will be ensured through the payment of regulated TPA tariffs by network users Nevertheless, it's important to notice that it is not possible to predict if, when and to what extent any changes to this model may occur. |

| Description                                          | New salt cavern in the Carriço UGS site (7th cavern). Carriço UGS is based on caverns leached in a salt dome. Surface plant includes the facilities for injection and withdrawal of natural gas from the caverns in operation. The Carriço UGS site currently has 6 salt caverns in operation (the latest of which was commissioned in late 2014). Currently the plans for construction of additional caverns have been postponed and are pending from the reassessment of security of supply and market requirements post economic and financial downturn. |                  |              |

|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | <u>Market Demand</u>                                                                                                                                                                                     |
| Main Driver Explanation | Currently the plans for construction of additional caverns have been postponed and are pending from the reassessment of security of supply and market requirements post economic and financial downturn. |
| Benefit Description     | Increase in competition in Portugal, better market integration in the Iberian Peninsula aiming for the Mibgás development and increase in security of supply.                                            |

| Delay Since Last TYNDP | 12 months                                                                                                                                                                                                                                          |
| Delay Explanation      | Problems during the construction phase. The complicated geological structure, under the bottom section of the Danube river had to be crossed by Horizontal Directional Drilling, produced significant delays as a result of unpredictable factors. |

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                               |

| Description                                          | The WS pipeline will transport gas produced in the Caspian area from Georgia to the EU. It will branch off an existing pipeline from Azerbaijan to Georgian-Turkish border (the SCP) and will include an onshore pipeline from the SCP connection point to Georgian Black Sea coast where a major compressor station will provide the high pressure required to transmit gas to Constanta Romania, across the Black Sea. An alternative destination to Varna, Bulgaria and connection to Trans-Balkan pipeline is currently being considered. |                              |                     |

| Description                                          | <p>The project consists in the revamping and expansion of an existing gas storage facility of 300 mcm situated in Targu Mures, Central Romania. The rationale of the project is three fold (i) increase operational independence by building its own compression unit as currently compression services are rented from another party (ii) gradually expand the storage capacity (from 300 mcm to 400 mcm in a first stage and to 600 mcm in a second stage) and (iii) increase flexibility of the storage by increasing injection and withdrawing capacity from the existing average 1.7 mcm/ day to approx. 5.0 mcm/day after implementation of the second stage. The implementation of the first stage has already been initiated with a partial investment to be finalized in 2016, while the FID for the entire phase I of the development project is expected in 2016.</p> |                         |                |

**PCI Details**

|                             |                                                                                    |  |  |  |  |  |
|-----------------------------|------------------------------------------------------------------------------------|--|--|--|--|--|
| PCI Benefits                | <i>Project aims at supplying directly or indirectly at least two Member States</i> |  |  |  |  |  |
| General Criteria Fulfilled  | <i>Yes</i>                                                                         |  |  |  |  |  |
| Specific Criteria Fulfilled | <i>Competition, Market Integration, Security of Supply, Sustainability</i>         |  |  |  |  |  |

Specific Criteria Fulfilled Comments Although the project meets all the criteria, the most significant contribution it brings is to the EU's security of supply. - The project is even more important in a low infrastructure scenario, in which the N-1 indicator is below 100% and in which the additional storage capacity of Depomures would partially compensate a malfunction at Mediesu-Aurit/ Isaccea gas entry point from Ukraine to Romania. - The remaining flexibility indicator shows that the project successfully contributes to increasing resilience in case of additional demand in almost all scenarios with impact on Romania, Bulgaria, Hungary, Italy, Greece and Croatia. The impact is most visible in extreme scenarios such as Ukraine disruption with 2 week cold spell. - The project contributes to a decrease of the disrupted demand in two Members States, namely Romania and Bulgaria, and also in the FYR of Macedonia (although not a Member State) in most scenarios.

| Delay Since Last TYNDP | 3 years for Phase 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Delay Explanation      | The main delay encountered is related to permit granting for part of the investment (i.e. the last sector of the main gathering pipeline). The construction of the main gathering pipeline is essential for the entire project and a pre-requisite for implementing the rest of the project (dehydration and compression station and subsequent expansion to 600 mcm of the capacity). We are currently in the process of finding a solution for the remaining permit and have communicated the problem to the Competent Authority as well as to the European Commission. |

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Main Driver Explanation | In addition to those mentioned in the additional comments to the specific criteria, the project is even more important in the current rather potentially unstable geo-political context in the far Eastern Europe in which having sufficient capacities of the gas storage facilities may become critical for ensuring security of supply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Benefit Description     | Market Integration The Project successfully contributes to increasing resilience in case of additional demand in almost all disruption scenarios with positive impact on Romania, Bulgaria, Hungary, Italy, Greece and Croatia. Thus, indirectly it contributes to a more integrated gas market. Sustainability It replaces existing rather obsolete gas compression facilities with modern and high-efficiency technology (new electro-compressors etc.) which will reduce emissions currently generated by the compression services supplied by the third party. Competition The implementation of this project would also increase the competition on the Romanian storage market considering that currently there are only 2 players: Depomures, the private operator with ~10% market share and Romgaz, state owned, with ~90% market share. After project COD, the market share of the private sector would increase proportionally. |

**Barriers**

|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | The permit granting process has been delayed due to difficulties in obtaining the building permit from local administration for the last section of the main collector pipeline, which may impact the implementation of the entire project. |
| Financing       | Availability of funds and associated conditions                                                                                                                                                                                             |
| Regulatory      | Low or zero-priced short-term capacity                                                                                                                                                                                                      |

| Description                                          | Development of the Romanian gas transmission system in order to improve the gas supply in the North –East region of Romania and to increase transmission capacities so as to improve gas supply in the area as well as to ensure transmission capacities in the perspective offered by the new pipeline for the interconnection of Romania and the Republic of Moldova. The scope of the project is the achievement of the following objectives: □ The construction of a new gas transmission pipeline Dn 700, Pn 55 bar, in the direction Onești-Gherăiești, 104 km long; □ The construction of a new gas transmission pipeline Dn 700, Pn 55 bar, in the direction Gherăiești-Lețcani, 61 km long; □ The construction of a gas compressor station at Onești, with an installed power of 6 MW, with 2 compressors of 3 MW each; □ The construction of a gas compressor station at Gherăiești with an installed power of 4 MW, with 2 compressors of 2 MW each. |                       |          |
| Regulatory Decisions and similar material conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                       |          |

Description

The scope of the project is the construction of a new gas transmission pipeline to enable the connection between the Technological Hub Podisor and GMS Horia and the construction of compressor stations along the route (CS Jupa, CS Bibesti and CS Podisor). Transgaz considers the development of the BRHA Project in stages, as follows: Stage I □ Gas transmission pipeline Podișor-Recaș 32" x 63 bar, approximately 478 km long; □ Three gas compressor stations (CS Podisor, CS Bibesti, CS Jupa) each station is equipped with two compressor units which may enable bidirectional gas flows. Upon the completion of Stage I the following transmission capacities will be ensured: □ towards Hungary: 1,75 billion m3/year; □ towards Bulgaria: 1,5 billion m3/year. Stage II □ gas transmission pipeline Recaș-Horia 32" x 63 bar, approximately 50 km long; □ expansion of the three gas compressor stations (CS Podisor, CS Bibesti and CS Jupa) by mounting an additional compressor unit in each station); □ Expan

| Main Driver Explanation |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Benefit Description     | <i>- Increase of competition through the diversification of gas sources and transmission routes, and the emerging of new players on the regional gas market, with positive effects on the gas price, decreasing thus market concentration for each impacted country; - Increase of sustainability through diminishing CO2 emissions, as a result of replacing gas with liquid (oil) or solid fossil fuels (coal) with higher CO2 emissions.</i> |

Barriers

| Barrier Type    | Description                                                                            |
|-----------------|----------------------------------------------------------------------------------------|
| Regulatory      | Changes in national/EU legislation which may impact the implementation of the project. |
| Permit Granting | Long and complicated process requiring also the obtaining of the right of way          |
| Financing       | Availability of funds and associated conditions                                        |

New underground gas storage in Romania

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                         |                |

| Description                                          | Several options for the construction of a new gas storage facility in depleted gas field (onshore) to be considered. The project to be located in the Eastern part of Romania (Moldova region), near Falticeni. The location of the depleted reservoirs to be converted into UGS was determined according to the following criteria: - the envisaged reservoirs allow the construction of a small-medium sized UGS of 200 million m3/cycle, with future development possibilities; - the location is next to areas with consumption deficit and very low temperatures during winter season; - the UGS is to be located near important industrial gas consumers and households - it may be used for increasing the security of supply in Romania and for facilitating possible gas exports to Republic of Moldova - existing projects to develop gas resources in the Black Sea and the possibility to create interconnections to projects part of the southern European transmission corridor - main pipeline close to the area |                         |                |

| PCI Benefits                         | Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Specific Criteria Fulfilled          | Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Specific Criteria Fulfilled Comments | Increase of security of supply by adding new storage capacity in the Eastern part of Romania. This part of Romania includes major cities and industry and has the coldest climate in Romania. Possible increase of security of supply in the Republic of Moldova by connection to the Romanian - Moldavian Interconnection. Market integration: Some impact on GPI in RO under various price scenarios. Increase of security of supply by adding new storage capacity in the Eastern part of Romania. This part of Romania includes some major cities and industry and has the coldest climate in Romania. Possible increase of security of supply in the Republic of Moldova by connection to the Romanian - Moldavian Interconnection. Sustainability: Positive project impact higher in 2030 and 2035 on the total EU bill, Gas Bill ex. NP ex. CO2, and Disrupted Demand Cost under most price scenarios under FID. Highest impact on the total Disrupted Demand Cost for various price sources, FID, in 2035. |

**Time Schedule**

Grant Obtention Date 01/11/2016  
 Delay Since Last TYNDP  
 Delay Explanation

**Expected Gas Sourcing**

Romania

**Benefits**

**Main Driver** Regulation SoS

**Main Driver Explanation** The project shall contribute to the enhancement of the energy security in Romania and South-East Europe by creating the UGS connection to internal consumption areas with current gas supply deficit, making thus available gas volumes for use in other consumption directions. The project shall also have a contribution in terms of supply of regional market in Republic of Moldova, a country associated to EU via Iasi-Ungheni interconnector.

**Benefit Description** We wish to highlight the fact that any present or future pipeline project aiming to improve Romania’s interconnection to the gas systems in the region does need Underground Storage Facilities as a support to ensure base-load supply as well as flexibility of supply, both to and from Romania. Considering the interconnection pipelines included in the TYNDP to neighbouring MS (Hungary reverse flow, Bulgaria) as well as interconnections to Non-member States which are Associate States to the EU (Ukraine, Moldova), UGS facilities are indispensable assets for the proper operation of such interconnections. Another reason for our proposal to extend UGS capacities in Romania (including the construction of a completely new facility in the NE part of Romania) are the new discoveries in the Romanian sector of the Black Sea (e.g Domino1),

**Barriers**

| Barrier Type | Description                                               |
|--------------|-----------------------------------------------------------|
| Regulatory   | - no negotiated tariffs - no daily/weekly balance reports |
| Market       | Lack of market support                                    |
| Regulatory   | Low or zero-priced short-term capacity                    |
| Market       | Lack of market maturity                                   |
| Financing    | Amortization rates                                        |
| Regulatory   | Low rate of return                                        |

Sarmasel underground gas storage in Romania

| UGS-N-371                                            | Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Storage Facility | Non-FID      |

| Description                                          | Improvement of the injection capacity of the seasonal storage facility and installation of compressors at UGS Sarmasel. Project may greatly contribute to increasing the overall UGS capacity in South-East Europe by connecting Sarmasel UGS to "Bulgaria-Romania-Hungary-Austria Corridor", a project developed by SNTGN Transgaz S.A. Medias, consisting of gradual construction of a new gas transmission line between Podisor Technological Node and Horia gas metering station. The project consists of: 1 increasing the working capacity of Sarmasel UGS by 650 million m3, up to a total of 1,550 million m3/cycle with a cushion gas of 1,130 million m3; 2 increasing the security and efficiency of Sarmasel UGS 3 increasing the energy security by ensuring a higher volume of stored gas (increase of approximately 18%). 4 increasing the daily delivery capacity by 3 million m3/day. 5 lowering the dependence on import gas during winter time by approximately 40% on a daily basis. |                  |              |

| Specific Criteria Fulfilled Comments | The project may contribute to SoS in Romania and neighbouring countries in SE Europe and lead to decrease of dependency on imports during the cold season. Market Integration. Some impact of the project on GPI in various countries, especially in RO and BG under various price scenarios, Some impact on Remaining Flexibility for BG in 2035 for Ukraine disruption for 2 weeks. Correlated impact on disrupted rate and disrupted demand. Security of Supply. Impact of the project under Ukraine disruption only in Romania, after 2030 both in DC and 2W . N-1 impact under low and high infrastructure scenario. Minor impact on on supply price diversification and supply price dependence . Sustainability. Positive project impact on the total EU bill, NP Bill ex. CO2, CO2 bill in 2025 and 2030 under most price scenarios under FID. Positive impact on disrupted . Reducing bottlenecks. Significant impact on Marginal Price in Price in RO in 2025 and 2030 |

| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Main Driver Explanation | The project is able to have a major contribution to SoS on the N-S corridor Bulgaria - Romania - Hungary, which is currently included in the plans of Transgaz S.A. envisaging the construction of a new pipeline between Podisor and Horia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Benefit Description     | Increasing safety of gas supply in Romania and South-East Europe by securing higher gas volumes to be stored; - Increasing the daily capacity and the natural gas delivery flexibility; - Reducing gas imports during winter time; - Contributing to sustainability and market integration in the region We wish to highlight the fact that any present or future pipeline project aiming to improve Romania's interconnection to the gas systems in the region does need underground storage facilities as a support to ensure base-load supply as well as flexibility of supply, both to and from Romania. Considering the interconnection pipelines included in the TYNDP to neighbouring MS (Hungary reverse flow, Bulgaria) UGS facilities are indispensable assets for the proper operation of such interconnections. Another reasons are the new discoveries in the Romanian sector of the Black Sea (e.g Domino1). |

## Barriers

| Barrier Type | Description                                               |
|--------------|-----------------------------------------------------------|
| Regulatory   | - no negotiated tariffs - no daily/weekly balance reports |
| Regulatory   | Low or zero-priced short-term capacity                    |
| Market       | Lack of market support                                    |
| Market       | Lack of market maturity                                   |
| Financing    | Amortization rates                                        |
| Regulatory   | Low rate of return                                        |

Azerbaijan, Georgia, Romania Interconnector - AGRI

| Description                                          | <p>Eastring-RO, located in Romania is an essential part of the Eastring project, which connects IP Veľké Kapušany / Veľké Zlievce at the SK-UA border, with IP at the BG/TR border. Eastring is a natural gas pipeline project. It will not own or sell any natural gas and once available, all its capacity will be offered to any shipper on non-discriminatory basis respecting all EU rules and laws (Directives and Regulations). Eastring will connect the existing gas infrastructure between Slovakia, Hungary, Romania and Bulgaria in a bidirectional conjunction bringing a new transit potential and improving gas market situation in each of the respective countries. Maximum daily bi-directional capacity will be of 20 bcm/year (Stage I) and 40 bcm/year (Stage II). The project would secure supplies in case of RU disruption and therefore it will increase gas SoS in the broader Central-South-East EU region, as well as will allow access to alternative gas sources for Central, Western &amp; Southern Europe</p> |                       |              |

| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Main Driver Explanation | The project brings benefits to the SoS, bringing the new sources of gas supply and South-Eastern Europe countries, towards the Central and Western Europe markets, while further enhancing the market integration of the affected countries.                                                                                                                                                                                                                                                  |
| Benefit Description     | - Physical alternative for providing gas from other sources, for all Balkan countries' consumption; - Providing security of supply for the Balkan countries' consumption; - Additional utilization for transit and storage assets; - Providing Western shippers with possibility to supply to Balkan countries and even Turkey from different other gas surces located in Europe; - Corridor ready for future gas imports to Europe from the Southern Corridor and other alternative sources. |

Further enlargement of the BG—RO—HU—AT transmission corridor (BRUA) phase 3

| Description                                          | Development of gas transmission capacity on the Onești – Coroi – Hațeg – Nădlac corridor depending on the available gas quantities at the Black Sea shore or from other on-shore blocks. The development of this gas transmission corridor requires: □ the rehabilitation of some of the NTS existing pipelines; □ replacement of some of the NTS existing pipelines with new pipelines or the building of new pipelines installed in parallel with the existing ones; □ development of 4 or 5 new compressor stations having a total installed power of approximately 66- 82.5MW. |                              |                     |

| Main Driver Explanation | Positive impact for security of supply with gas for Romania and Bulgaria through the diversification of the gas transmission routes and enabling access to new sources (the Black Sea zone); - Increase of security of supply with gas for Romania. Since this pipeline enables access to new supply sources over the long term, the probability to interrupt gas supply will be reduced, and in case of an interruption, the consequences will be less serious. This increase of security of supply has benefits also for Bulgaria through a larger gas delivery availability, ensuring thus the cross-border externalities; |
| Benefit Description     | - Increase of competition through the diversification of the gas supply sources and transmission routes, and the the emerging of new players on the regional gas market, with positive effects on the gas price, thus decreasing market concentration for each impacted country; - Increase of sustainability through diminishing CO2 emissions, as a result of replacing gas with liquid (oil) or solid fossil fuels (coal) with higher CO2 emissions.                                                                                                                                                                       |

|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                  |
| Main Driver Explanation | The project is designed to cover several market segments with the main volume driver LNG send out to marine and industrial segments but also for injection to Swedegas' existing transmission grid.                                                                                                                                                                            |
| Benefit Description     | Facilitates supply to non grid customers, such as industry replacing oil and future bunkering of ships to comply with the coming SECA regulation. Connetion to the grid allows an second entry point to the Swedish transmission grid increasing security of supply and competition. Connection also timproves functionality such as pressure holding, short term storage etc. |

Barriers

| Barrier Type    | Description                                                                                                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regulatory      | Small scale LNG is an emerging market with no mature trade patterns which make it difficult to combine capacity holders in a cost-efficient way - given a low rate of return. |
| Permit Granting | Permits obtained                                                                                                                                                              |
| Regulatory      | Low rate of return                                                                                                                                                            |
| Market          | Lack of market support                                                                                                                                                        |

## Benefits

|                         |                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Others                                                                                                                                                                                                                                                                                                                                  |
| Main Driver Explanation | Increase of SoS in the CEE region Integration of gas infrastructure in the CEE region by constructing a cross-border interconnection between PL and SK that is currently missing.                                                                                                                                                       |
| Benefit Description     | List of countries as defined by the 2013/2014 PS-CBA analysis. Even though Ukraine is not a member state of the EU, the Project has important impact to the country due to adoption of reverse flow capacity from Slovakia towards Ukraine. Furthermore, Ukraine has adopted the Association Agreement with the European Union already. |

## Barriers

|              |                                                 |
|--------------|-------------------------------------------------|
| Barrier Type | Description                                     |
| Regulatory   | Low rate of return                              |
| Financing    | Availability of funds and associated conditions |
| Market       | Lack of market support                          |

## Intergovernmental Agreements

| Agreement                                                                                                                                                                                                                                            | Agreement Description       | Is Signed | Agreement Signature Date |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-----------|--------------------------|
| Agreement between the Government of the Slovak Republic and the Government of the Republic of Poland for cooperation on the implementation of the project of a gas pipeline connecting the Slovak transmission system and Polish transmission system | Intergovernmental agreement | Yes       | 22/11/2013               |

Eastring - Slovakia

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                       |              |

| Description                                          | <p>Eastring-SK is subproject located in Slovakia/Ukraine and is essential part of the Eastring project, which connects IP Velké Kapušany at the SK-UA border, with a new entry IP at an external border of the EU on the territory of Bulgaria in the following routing options: – from SK to RO – via UA, (exist. pipeline) – via HU, (new pipeline). – from RO to TR – Option A – new pipeline passing production &amp; storage area and continuing to IP Isaccea and to BG/TR border by utilizing existing RO-BG transit assets – Option B – new pipeline, passing 2 production &amp; storage areas and continuing to an external border of the EU on the territory of Bulgaria. The project would (i) secure supplies in case of RU disruption and therefore it will increase gas SoS in the broader Central-South-East EU region, (ii) allow access to alternative gas sources for Central, Western &amp; Southern Europe and (iii) mean step towards EU single gas market.</p> |                       |              |

| Main Driver Explanation | The project brings significant benefits to the SoS of Europe, bringing the increasing new sources of gas supply in South Eastern Europe to the markets of Central and Western Europe, while further enhancing the market integration of the affected countries.                                                                                                                                                                                                                                                        |
| Benefit Description     | - Physical alternative for providing 100% of all Balkan countries' consumption; - Providing security of supply for 100% of all Balkan countries' consumption; - Additional utilization for CZ, SK, PL, UA, RO, BG transit and storage assets; - Providing Western shippers with possibility to supply Balkan countries and even Turkey from NCG/Gaspool/Baumgarten; - Corridor ready for future gas imports to Europe from alternative sources – AGRI, TANAP, Caspian, Iran, Iraq, Egypt, Israel, Cyprus, Turkey, etc. |

| Description                                          | The goal of the project Capacity increase at IP Lanžhot (Entry - Eustream) is the upgrade of cross-border capacity at the entry IP Lanžhot. Project is among others developed in the context of Eastring project, the aim is to provide sufficient future transit capacity for delivery of gas for the region of CEE/SEE Europe, namely Balkan countries, as well as ensuring security supplies to Ukraine as well as integration of CEE/SEE region to the developed spot markets. |                              |                |

Expected Gas Sourcing

Spot

Benefits

Main Driver Market Demand

Main Driver Explanation

Benefit Description Project is among others developed in the context of Eastring project, the aim is to provide sufficient future transit capacity for delivery of gas for the region of CEE/SEE Europe, namely Balkan countries, as well as ensuring security supplies to Ukraine as well as integration of CEE/SEE region to the developed spot markets.

Barriers

Barrier Type Description

Market Lack of market maturity

Regulatory Low rate of return

Regulatory Capacity quotas

Exit Capacity Budince

|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                         | Project changes the capability to transmit gas across the borders of the member states concerned by at least 10%, compared to the situation prior to the commissioning of the project, Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU, Project concerns investment in reverse flow capacity, Project aims at supplying directly or indirectly at least two Member States                                          |
| General Criteria Fulfilled           | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled          | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specific Criteria Fulfilled Comments | This project will open up the GB-NI-Republic of Ireland corridor, and the Republic of Ireland-NI-GB corridor, both currently unavailable. All three markets would have the ability for physical bi-directional links for the first time. The project would allow future gas finds in Northern Ireland to be accessed by GB and RoI. The project will allow GB and RoI to access flexible gas storage planned for Northern Ireland – which is essential for Northern Ireland gas storage to be feasible. |

**Time Schedule**

|                        |                |
|------------------------|----------------|
| Grant Obtention Date   |                |
| Delay Since Last TYNDP | Approx 2 years |

Delay Explanation                      This project is linked to the Islandmagee gas storage project and has been subsequently delayed, in line with the gas storage project being delayed – caused by the absence of competitive transmission tariffs for gas storage.

**Benefits**

Main Driver                      Market Demand

Main Driver Explanation      Mainly due to Islandmagee Gas Storage Project

Benefit Description              This project will open up the GB-NI-Republic of Ireland corridor, and the Republic of Ireland-NI-GB corridor, both currently unavailable. All three markets would have the ability for physical bi-directional links for the first time. The project would allow future gas finds in Northern Ireland to be accessed by GB and RoI. The project will allow GB and RoI to access flexible gas storage planned for Northern Ireland – which is essential for Northern Ireland gas storage to be feasible. The planned upgrade will allow security of supply benefits due to the ability to use the planned gas storage facility. It will also provide back-up support for renewable generation.

| Description                                          | IMSL plans to create seven caverns, capable of storing up to a total of 500 million cubic metres of gas. This facility will safeguard Northern Ireland's ability to meet the increasing peak gas demand, whilst also providing a greater degree of security of supply to Ireland and Great Britain. |                         |                     |

| Main Driver Explanation |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Benefit Description     | <p>The facility will remove the bottleneck between Northern Ireland (NI) and Republic of Ireland (ROI) markets caused by pressure differentials between the two networks, by enabling the pressures within NI to be sufficient to enable export of gas from NI to ROI. The project will end energy isolation due to greater connectivity with ROI and Great Britain (GB) markets. NI is currently fully import dependent. The facility will permit exports to be delivered from NI, enhancing free flow of gas to meet localised demand. An alternative source of gas supply to the island of Ireland. The facility will enhance physical and price security of supply for the N.Ireland, ROI and GB markets. The project will provide support to renewable electricity generation in both ROI and NI by increasing the availability of flexible gas supplies to support gas generating plant which will be increasingly required to operate in conjunction with intermittent wind generation.</p> |

| Description                                          | EU environmental policy places stricter controls on industrial emissions. Industrial Emissions Directive (IED) came into force on 6 January 2011. Under the Large Combustion Plant (LCP) component of IED, seventeen compressor units at seven compressor sites located on the National Transmission System (NTS) will not be compliant from 2023. |                              |                     |

| Specific Criteria Fulfilled Comments | Market Integration: The intention of PRF is to enhance interoperability of the Irish and Northern Ireland (UK) gas markets with the Great Britain (UK) market, in line with the goal of the European Union in achieving an EU Single Market in Gas. Ireland and Northern Ireland (UK) are currently at the extremity of the EU gas network with no ability to export to Great Britain (UK) and beyond. The PRF projects would allow, for the first time, trade from Ireland/Northern Ireland (UK) to Great Britain (UK). This opportunity is likely to encourage new gas supply sources in Ireland and Northern Ireland which in turn would help increase trading opportunities between Ireland, Northern Ireland (UK) and Great Britain (UK), further enhancing market integration in these regions. Security of Supply: PRF would mean that new gas supply sources (e.g. Corrib) in Ireland/Northern Ireland can compete which those in Great Britain (UK). In addition, by providing an export option for the first time to Great |

**Description**

**Regulatory Decisions and similar material conditions**

Eagle LNG is a gas infrastructure project expected to be operational by 2020. The project consists in a 8 bcma floating LNG import terminal (FSRU vessel) located 6 km offshore the Albania coast, integrated with a 10 bcma, 110 km subsea gas pipeline to be built across the Adriatic between Albania and Italy to transmit the gas from the FSRU to Italy (Puglia region, 18 km south of Brindisi in the town of Torchiarolo) and to Albania (5km N-NE from the Vjosë river estuary).

**Capacity Increments Variant For Modelling**

| Variant : Connection Eagle LNG - IAP |                                   | Default variant for use in modeling |                 |               |             |

#### PCI Details

|                             |                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCI Benefits                | Project aims at fulfilling the infrastructure standard (N-1) rule at regional level in accordance with Article 6(3) of Regulation EU, Project aims at supplying directly or indirectly at least two Member States |
| General Criteria Fulfilled  | Yes                                                                                                                                                                                                               |
| Specific Criteria Fulfilled | Competition, Market Integration, Security of Supply, Sustainability                                                                                                                                               |

Specific Criteria Fulfilled Comments

The strategic objective is to introduce directly a new gas source and import route to Albania, Italy and South East Europe. The project will gasify SEE countries and will increase security of supply and competition. Through the Ionian Adriatic Pipeline (IAP), the project will supply Montenegro, Bosnia and Herzegovina and Croatia. From Croatia it will extend its impact to towards Slovenia and Hungary. Thanks to the reverse flow in the north of Italy it will extend its impact to Western Europe. The Albanian government is also planning to export gas from Eagle LNG to Kosovo (1 bcma) and FYR of Macedonia (0.7 bcma). According to the results of the CBA performed in 2015 by ENTSG to evaluate new gas infrastructures against the EU's priority criteria of market integration, competition, security of supply and sustainability, Eagle LNG was deemed to have a positive effect on no fewer than a dozen EU member states, making it a top of the list project in terms of its regional impact.

**Time Schedule**

|                        |                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------|
| Grant Obtention Date   |                                                                                                                    |
| Delay Since Last TYNDP | 2 years                                                                                                            |
| Delay Explanation      | - Availability of funds and associated conditions - Gas price volatility - Securing gas demand contractual volumes |

**Expected Gas Sourcing**

LNG ()

**Comments about the Third-Party Access Regime**

TPA Exemption on the regas terminal capacity and on the pipeline capacity is sought only for a portion of the total capacity. The non-exempted portion of medium and long-term project capacity will be awarded on a transparent and competitive basis through an open season tender process.

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Main Driver             | Market Demand                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Main Driver Explanation | Gas demand in southeast Europe is expected to reach 11 Bcm/year by 2020 and 13 Bcm/year by 2025, mostly driven by the need to replace coal and lignite in power generation with gas. This requires building new gas supply and transmission infrastructure. With respect to Albania, natural gas and the development of the gas- linked industry and gas-fired power generation is set as a national priority in the country's endeavours to diversify its energy resources. The country depends 99% on renewable sources (hydro) for power generation, which results in high exposure to the variability of weather conditions and in expensive power imports to cover the unbalances. |
| Benefit Description     | For the Balkans, LNG is the best option to deliver a quick and economic and secure source of gas. In the EU-funded Gas Master Plan study for Albania, comparing different sources of gas, Eagle LNG was shown in 2016 to be the most economical source for the region.                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Barriers**

| Barrier Type    | Description                                                                                                                                                          |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | The local (regional and communal) approvals in Italy for the onshore pipeline infrastructures represent a possible source of concern as a potential cause of delays. |

Market In Albania the legislation on gas market and gas infrastructure is not yet complete as the gas sector is under development. It is not yet clear the demand size and its build up timing in Albania, initially driven by new investments on gas-fired power plants. Likewise it is still uncertain the gas purchase price level that these anchor points can guarantee.

Market Lack of market maturity

| Update Date                                          | 10/05/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                       | Advanced |
| Description                                          | <p>The AlbaniaKosovo Gas Pipeline (ALKOGAP) project is to interconnect the existing and planned gas transmission system of the Republic of Albania including TAP &amp; IAP project) with the future projected gas transmission system of the Republic of Kosovo, and the transmission interconnectors which are part of eastern brunch of Energy Community Gas Ring (ECGR), as well. This transmission pipeline would create the preconditions for the further development of the natural gas markets of Albania, and the creation and development of the natural gas markets of Kosovo in the estimated annual level of 2 bcm (1-1.3 bcm for Albania and 0.5 - 0.7 bcm for Kosovo). It would be possible to increase its capacity (double or triple), in the case that ALKOGAP will be used to supply Serbia and other countries with Caspian or Middle East gas.</p> |                       |          |
| Regulatory Decisions and similar material conditions | <p>This project is in line with the aims of the Energy Community Treaty –establishing the regional gas market, integrated with EU energy market. The Albania-Kosovo gas pipeline is considered part of the Energy Community Gas Ring, which is the concept of gasification for entire region, proposed by the WB Study and accepted by the Gas Fora of the Energy Community. The proposed project is in line with the: -Albanian Government priorities in the gasification of the country. -In the gasification of the EU countries and Contracting Parties of the Energy Community.</p>                                                                                                                                                                                                                                                                               |                       |          |

**Time Schedule**

Grant Obtention Date  
 Delay Since Last TYNDP

Delay Explanation: Ministry of Energy and Industry of Albania is working in the cooperation with WBIF to prepare the Study of "Gas Master Plan for Albania" and "Project of Identifican Plan". As soon as this study will be completed by the Consultant COWI-IPF, the final route will be defined. Also, the Ministries of Albania and Kosovo have applied to WBIF for a grant to prepare a Feasibility Study for this project that will identify the preliminary and main routes for this project.

**Expected Gas Sourcing**

Caspian Region

**Benefits**

Main Driver: Market Demand

Main Driver Explanation The AlbaniaKosovoGas Pipeline (ALKOGAP) project is to interconnect the existing and planned gas transmission system of the Republic of Albania (including TAP & IAP project) with the future projected gas transmission system of the Republic of Kosovo, and the transmission interconnectors which are part of eastern branch of Energy Community Gas Ring (ECGR), as well. The project aims to establish a new supply route for natural gas from the Middle East and Caspian Region transported by Trans Adriatic Pipeline, northeastwards of the Western Balkan area towards Serbia. The ALKOGAP project however shall be planned as bidirectional pipeline, so the possible supply direction could also be north – south, from the ECGR, or other sources.

Benefit Description The benefits will include: introducing an environmentally more acceptable energy source in the region (replacement for firewood, coal, fuel oil and complementary generation to renewable energy, and the potential for increased cogeneration and CHP) facilitating the gasification of considerable eastern parts of Albania and entire territory of Kosovo increasing energy security to both Albania and Kosovo providing diversified gas supply to the region providing the access to Albanian storage capacities providing significant transit capacity and income to Albania and Kosovo, creating the preconditions for supporting the regional concept of South European Gas Ring. Reducing CO2 emissions in the region and facilitating economic development.

| Description                                          | The starting point of Brod - Zenica gas pipeline is in close vicinity of Brod where it should be connected to the high-pressure gas pipeline Slobodnica - Brod (TSO – Plinacro) in the Republic of Croatia. Point of interconnection between Croatian and BiH natural gas transmission network is Brod/Slavonski Brod. The gas pipeline is planned to be bi-directional, and together with Southern Interconnection BiH/CRO creates a part of EC Gas Ring. |                       |              |

| Delay Since Last TYNDP | YES                                                                                                                                                                                                                                                                                                                                                                                                    |
| Delay Explanation      | Regarding the fact that the part of this project runs through Republic of Srpska Entity, the main obstacle is lack of political support of the RS official representatives, as well as lack of primary gas legislation at the state level in accordance with the Third Energy Package. Also, existing natural gas market is not able to cover assessed project cost related to preliminary activities. |

### Expected Gas Sourcing

Algeria, Caspian Region, Norway, Russia, LNG (HR)

### Comments about the Third-Party Access Regime

It is expected that TPA regime and Tariff methodology will be covered by gas primary legislation, all in accordance with Third Package at least up to the end 2016.

### Benefits

Main Driver Regulation SoS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver Explanation | Project will directly increase N-1 for Bosnia and Herzegovina and enable flexibility of the natural gas system in BiH in case of disruptions, having in mind that currently BiH gas system is isolated and depending of one supply route.                                                                                                                                                      |
| Benefit Description     | Project will improve import route diversification and supply source price diversification. Project will enable development of natural gas market in BiH. Lower usage of firewood in the energy consumption sector (residential and industrial) means significant protection on forestry in BiH. Project will decrease CO2 emissions. Project will not cause any demaging environmental impact. |

**Barriers**

| Barrier Type    | Description                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permit Granting | Projects runs through the two BiH entities and procedures of providing necessary consent have to be conducted in accordance with positive legislation of both entities, and permits have to be issued by relevant bodies of Federation of BiH and Republic of Srpska. Provision of permits will be accordingly long lasting and expensive. The same is related to the land acquisition. |
| Political       | Lack of primary gas legislation in accordance with Third Energy Package, as well as energy policy at the state level.                                                                                                                                                                                                                                                                   |
| Financing       | Availability of funds and associated conditions                                                                                                                                                                                                                                                                                                                                         |
| Market          | Lack of market support                                                                                                                                                                                                                                                                                                                                                                  |
| Regulatory      | Lack of proper transposition of EU regulation                                                                                                                                                                                                                                                                                                                                           |

It is expected that TPA regime and Tariff methodology will be covered by gas primary legislation in accordance with Third Package at least up to the end of 2016.

**Benefits**

|                         |                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                                                                                                                                                                                                                                                                                    |
| Main Driver Explanation | Project will increase N-1 for Bosnia and Herzegovina and enable flexibility of natural gas system in BiH in case of disruptions, having in mind that currently BiH gas system is isolated and depending of one supply route.                                                                                                                                                      |
| Benefit Description     | Project will improve import route and supply source price diversification. Project will enable development of the natural gas market in BiH. Lower usage of fire wood in the energy consumption sector (residential and industrial) means seignificant protection of BiH forestry. Project will decrease CO2 emissions. Project will not cause any damaging environmental impact. |

Barriers

| Barrier Type | Description                                                                                                           |
|--------------|-----------------------------------------------------------------------------------------------------------------------|
| Political    | Lack of primary gas legislation in accordance with Third Energy Package, as well as energy policy at the state level. |
| Market       | Lack of market support                                                                                                |
| Financing    | Availability of funds and associated conditions                                                                       |
| Regulatory   | Lack of proper transposition of EU regulation                                                                         |

| <b>Total</b>                                                   |                  |               | <b>23</b>   |                       |

### Time Schedule

Grant Obtention Date

Delay Since Last TYNDP

Delay Explanation MER JSC Skopje for the first time submits its projects in the TYNDP. The possibility of delay is due to the interstate procedures and financing.

### Expected Gas Sourcing

Caspian Region, Russia, The interconnection allows access to all gas sources from the neighbouring countries.

### Comments about the Third-Party Access Regime

The transmission tariff will be regulated according to EU regulations.

### Benefits

Main Driver Regulation SoS

Main Driver Explanation Enormous development of the national gasification system and hence increased consumption/demand on the market

Benefit Description -Security of supply -Diversification of sources -Development of the region (reversible gas pipelines)

## Barriers

| Barrier Type    | Description                                                                      |
|-----------------|----------------------------------------------------------------------------------|
| Permit Granting | After determining the project financing.                                         |
| Others          | Barriers regarding the implementation of the projects have not been encountered. |

## Intergovernmental Agreements

| Agreement                                                | Agreement Description | Is Signed | Agreement Signature Date |
|----------------------------------------------------------|-----------------------|-----------|--------------------------|

**Time Schedule**

|                        |                                                                                                                                                  |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Grant Obtention Date   |                                                                                                                                                  |
| Delay Since Last TYNDP |                                                                                                                                                  |
| Delay Explanation      | MER JSC Skopje for the first time submits its projects in the TYNDP. The possibility of delay is due to the interstate procedures and financing. |

**Expected Gas Sourcing**

Caspian Region, Russia

**Comments about the Third-Party Access Regime**

The transmission tariff will be regulated according to EU regulations.

**Benefits**

|                         |                                                                                                               |
|-------------------------|---------------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                                |
| Main Driver Explanation | Enormous development of the national gasification system and hence increased consumption/demand on the market |
| Benefit Description     | -Security of supply -Diversification of sources -Development of the region (reversible gas pipelines)         |

Barriers

| Barrier Type | Description                                                                                          |
|--------------|------------------------------------------------------------------------------------------------------|
| Others       | Due to obstacles to the development of the gasification, the projects in Kosovo have been postponed. |

Interconnection Macedonia-Bulgaria

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                              |                     |

| Delay Since Last TYNDP |                                                                                                                                                  |
| Delay Explanation      | MER JSC Skopje for the first time submits its projects in the TYNDP. The possibility of delay is due to the interstate procedures and financing. |

**Expected Gas Sourcing**

Caspian Region, Russia, The interconnection allows access to all gas sources from the neighbouring countries

**Comments about the Third-Party Access Regime**

The transmission tariff will be regulated according to EU regulations.

**Benefits**

|                         |                                                                                                       |
|-------------------------|-------------------------------------------------------------------------------------------------------|
| Main Driver             | Regulation SoS                                                                                        |
| Main Driver Explanation | Development of the national gasification system and hence increased consumption/demand on the market. |
| Benefit Description     | -Security of supply -Diversification of sources -Development of the region (reversible gas pipelines) |

## Barriers

| Barrier Type | Description                                                                  |
|--------------|------------------------------------------------------------------------------|
| Others       | Barriers regarding the realization of the project have not been encountered. |

## Intergovernmental Agreements

| Agreement                                                  | Agreement Description | Is Signed | Agreement Signature Date |

**Pipelines and Compressor Stations**

| Pipeline Section                            | Pipeline Comment | Diameter (mm) | Length (km) | Compressor Power (MW) |
|---------------------------------------------|------------------|---------------|-------------|-----------------------|
| Stip-Hamzali-Stojakovo (border with Greece) |                  | 700           | 110         |                       |
| <b>Total</b>                                |                  |               | <b>110</b>  |                       |

**Time Schedule**

Grant Obtention Date

Delay Since Last TYNDP

Delay Explanation **MER JSC Skopje for the first time submits this project in the TYNDP. The possibility of delay is due to the interstate procedures and financing.**

**Expected Gas Sourcing**

Caspian Region, Russia, The interconnection allows access to all gas sources from the neighbouring countries.

**Comments about the Third-Party Access Regime**

The transmission tariff will be regulated according to EU regulations.

**Benefits**

Main Driver **Regulation SoS**

Main Driver Explanation **Enormous development of the national gasification system and hence increased consumption/demand on the market**

Benefit Description **-Security of supply -Diversification of sources -Development of the region (reversible gas pipelines)**

**Time Schedule**

Grant Obtention Date

Delay Since Last TYNDP

Delay Explanation *MER JSC Skopje for the first time submits this project in the TYNDP. The possibility of delay is due to the interstate procedures and financing.*

**Expected Gas Sourcing**

*Russia, The interconnection allows access to all gas sources from the neighbouring countries.*

**Comments about the Third-Party Access Regime**

*The transmission tariff will be regulated according to EU regulations.*

**Benefits**

Main Driver *Market Demand*

Main Driver Explanation *Enormous development of the national gasification system and hence increased consumption/demand on the market.*

Benefit Description *-Security of supply -Diversification of sources -Development of the region (reversible gas pipelines).*

**Barriers**

Barrier Type *Description*

Others *Barriers regarding the implementation of the projects have not been encountered.*

| Update Date                                          | 08/07/2016                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                       | Non-Advanced |
| Description                                          | <p>TCP will branch-off at a connection with the East-West pipeline or for the first stage from a collection point of the offshore Caspian production/treatment in Turkmenistan. It will feed into Sangachal terminal and SCP-X (SCP-(F)X at a later stage). Several economically justified scenarios of TCP's step by step expansion are possible. A first early gas stage associated with one pipeline string is intended to transport 8-10 bcm/y towards Turkey (TANAP). Later on, the capacity is intended to be increased to up to 30-32 bcm/y and feed both Turkish (TANAP) and cross-Black Sea (via White Stream towards Baumgarten) directions. We are currently evaluating 2 options: a) 3 phased development, each for 10 bcm/y, with three 30in strings to be installed over time, b) 2 phased development, each for 15 bcm/y , with two 34in strings. Estimated costs: a) for 3x30in pipelines + one compression station terminal -€ 2 billion. b) for 2x34in pipelines + one compression station and terminal -€ 1.5 billion.</p> |                       |              |

| Description                                          | <p>TANAP intends for the transportation of the natural gas to be produced in Shah Deniz-2 field and other fields of Azerbaijan through Turkey to Europe. The TANAP (Trans-Anatolian Natural Gas Pipeline) Project will contribute to the European gas supply security and diversity by opening up the Southern Gas Corridor. It constitutes a significant part of the gas supply value chain together with SCPX (South Caucasus Pipeline-Expansion) and TAP (Trans Adriatic Pipeline) pipelines and provides a platform to foster gas to gas competition in European gas market based initially upon gas supplies from Azerbaijan's Shah Deniz gas field. The TANAP pipeline length within the borders of Turkey is about 1850 km on the section up to Greece connection to TAP Pipeline Project. TANAP includes an outside pipe diameter of 56 and 48 inches, across land and two 36 inches outside diameter Offshore pipeline are planned for the Dardanelle crossing through the Sea of Marmara.</p> |                       |          |

| Description                                          | <p>The objective of the project is to create a large transportation corridor between Poland and Ukraine which will contribute towards: • establishment of a well-integrated gas market in the region (PL, UA, CZ, SK, HU, RO, MDA) • diversification of gas routes and sources for Ukraine • enhancement of security of gas supply for Ukraine • reducing dependency on single gas supplier for Ukraine • strengthening energy solidarity between EU Energy Community and EU contracting countries • access to the gas storages in Ukraine for Poland and the EU countries Using Interconnector in forward and reverse direction will enable inject and withdraw natural gas from Ukrainian UGS for foreign owners up to 15 billion cubic meters.</p> |                       |              |

| Main Driver Explanation | <i>Introduction of pipeline interconnector with capacity to 8 bcm/year will allow to increase technical abilities of gas import by Ukraine from European countries by 40% (to 29.6 bcm/year). Resolution of the issue of connection of existing pipelines and planned interconnectors of four Vyshegrad States to the West part of Ukrainian GTS and Ukrainian underground storage facilities makes it possible to create the powerful East-European gas hub. Pipeline interconnector will allow for Ukraine to purchase not nly Russian gas, but also gas through the LNG terminal in Świnoujście from Qatar, the United States etc. and gas from Norway.</i> |

Benefit Description

HU-UA Interconnector (Ukrainian section)

| Description                                          | Currently at the Hungarian-Ukrainian border at interconnection point Beregdaroc 800 (HU>UA) only interruptible capacity is available. The main aim of the project is to provide firm capacity in the Hungary - Ukraine direction in order to ensure 178 GWh/d. This project needs certain system development in Ukraine and Hungary. Ukrainian section was finished in April 2016 and Hungarian section needs reconstruction and system enhancement which will be finished in two years after final investment decision. |                       |              |

| Main Driver Explanation | Providing firm capacity for shippers working in IP Beregdaroc. Increase of security of supply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Benefit Description     | The commissioning of the project will contribute towards enlarging the area covered by the North-South gas corridor via stronger integration of Ukrainian transmission network with the CEE Region. This is of crucial importance in particular, as Ukraine is a country that plays a vital role for a secure functioning of the gas markets in the CEE region due to its significance in terms of gas transit from Russia. The project will also largely increase the volume of an integrated gas market in the region. Such scale effect should positively influence the competition and attractiveness of the region towards upstream players and shippers. In addition, the market potential of the CEE region will grow significantly thanks to interconnected gas markets and will create a possibility of new gas flows between the concerned countries. |
